Which is why, on this issue, we need to get The Congress to tell FCC to do
likewise for ham antennas.

I read somewhere that FCC has also extended the CC&R preemption to include
antennas needed for wireless internet access (i.e., satellite) if such antennas
won't work indoors. Any truth to that?

I knew how to calculate parallel resistances when I was 12 years old. That was a year before I got my Novice license in 1967.

>I learned how later
>and even got a EE degree. What's wrong with that?

Typical Cecil - brags about his lack of knowledge as if it were a virtue. Watta hoot!

As has been pointed out, there are international agreements. As one who has passed the 20 wpm exam for my extra TWICE (1966 and again in 1993) plus my commercial telegraph, I can only say that CW has become outmoded. As to the rest of the question(s), cb is supposed to be a low power local communications available for citizens to use. Of course, many are using excessive power (I can understand the use of perhaps 50 watts to maintain local communications because of a large number running that and MUCH more), running on frequencies not authorized to them, and running on frequencies allocated to other services. The big problem is underfunding at the FCC; enforcement necessarily suffers. My gut feeling is that if there weren't this problem it would be likely that the authorized channels for cb would have been expanded further. The amateurs are also not likely to want to water down the exams (forget the cw, it may go away in a few years; again, it may not) simply because they are nervous about letting in a large number of people who may not respect rules. Certainly there are some problem amateurs. A number of them no longer have tickets, but the problem remains that without enforcement, there will be more problems. The easiest way to contain the problems a little bit is not to open up more authorizations to folks that haven't paid a bit of a price and therefore have little to use by abusing the privilege. As to the double standard - it really doesn't exist. Anyone known to the FCC (and, by a license, you are) will be easier to track. Certainly you don't want to be stupid enough to sign your amateur callsign whilst freebanding or running on cb, but the directional array is fairly accurate and will likely trace any hf signal to within a mile or two. Who does the FCC know within that mile or two? It doesn't mean you or I did it, but they'll be watching that licensed station closer since they have no idea of unlicensed stations might be.

Right on the money. BTW, that is the only exemption for a
transmitting antenna.

"Wireless Internet" is not only satellite, but also includes MMDS,
a service originally known as "wireless cable", which metamorphosed
into Domestic Wireless Internet offered for a while by Sprint Spectrum
in majot metropolitan areas.

Steve, this has been my concern with MURS. It looks nice on paper, but people will find out about scatter. They may not understand scatter, but they will find that 50 watts will work much farther than 2 watts. Once the hobbiests get on MURS, the 2 watt stations will be buried. It won't be long before a few enterprising folks find out what a few HUNDRED watts will do. With a good beam, expect communications ranges of 100 miles and much more. Heh - wait until a good tropo when a number of people are running a few hundred watts. It won't be as severe as cb, but thousands of people will discover (even though they may not understand it) capture effect. Of course, 2 meter signals have spanned oceans - without the aid of satellites or moonbounce. Goodbye business operation. Guess why Motorola and Radio Shack reversed themselves on the MURS question. My guess is they figure a lot of businesses are going to remember who sponsered the fiasco. Opening up frequencies for unlicensed operation or reducing license requirements is not a good idea unless the FCC gets up to the manpower (and enforcement power) that it had in the 1960s and before. Then, and only then, it may be a good idea.

Stewart, you'd best read up on amateur allocations. Some of them are shared. Some of them are EXCLUSIVELY amateur allocations - worldwide. Unfortunately, there are a number of countries that believe that the US government does whatever it wants and to heck with the rest of the world. That does not serve our interests in the least. Would you add fuel to that fire?

Part of it, Stewart, is that if a trucker is using 10 meters to talk to another trucker 5 miles down the road, and both are running 100 watts, it is doubtful there will be any ham close enough for enough time (I assume they are moving down the road) to produce meaningful interference. A distant station may hear them 10 over 9, but those trucks, 5 miles apart running 100 watts, won't likely hear that distant station trying to jam them.

Dave, just go back to being an innocent by-stander. It's what you do best
when you find yourself in an indefensible position.

> You know, come to think of it, some of those French guys could have been
> using the illegal Farnsworth method!

On 50.110-115? Hi! You better go talk to Larry about them rotten SSB
types.

Dave, you're really funny when your not so smug.

Poor Brian. The more he spouts off the more he illustrates his
ignorance. He has no clue to the difference between a bootlegger and a
licensed station who happens to wander outside his authorizations. I'm
sure the French version of the FCC knows. They may not be too concerned,
though. Maybe the French hams know it.

Anybody that thinks that allowing CBers free access to ANY band at "4 watts"
or
less is dreaming. They've managed to trash all 40 channels, frequencies
above and
below that, and now are squeaking and beeping their sh** on 10 and 12
meters. The
CB band is "land mobile", is governed by different rules than ham, and the
two do not
mix. All that is is an attempt to open the gates so that people can have
their potatos
without having to dig them up--typical of the modern attitude of
"entitlement" without
responsibility. That said, are you actually telling me that you think,
given the history of

CB in the past, that they would abide by rules on other bands as well?

>
> Hams shouldn't expect that the FCC is going to do everything for them...
> we've got an obligation to help track down these weasels as well.

That is what I said further down in this thread. If the problem is going to be solved,
WE, the licensed Amateurs, will have to become involved, and aggressively so. Just
today, I took a trip down into South Carolina. I made it a point on the return trip to
visit all the Travel Plazas on my route (about 5). In the Flying J, at Exit 70 on I-20E,
I found for sale a Magnum Delta Force "CB" radio. On the face, it clearly states 10
Meter Radio". There is NO FCC approval sticker anywhere. Guess what. If I have
my way, they are busted! Yes, they *may* or may not get a warning. But that info,
as well as a "Take to Cashier for Purchase" tag is going to FCC tomorrow along with a
catalog from a certain seller of unapproved radios and splattering amplifiers. That is
what it will take; ALL of us getting involved, searching out illegal operators, visiting Travel Plazas and CB shops as we travel, monitoring the lower end of 10 meters, and
recording and reporting what we find! I am serious, folks. If we want this handled, WE will have to prove to Congress, especially, that Amateur Radio is valuable (many
already know this), is worth protecting from unlicensed intruders, and that we have a
problem that needs attention. Sitting around, whining, griping, and, yes, criticizing ideas
that are put forth as possible ways to abate this problem will NOT solve it.

Also, I was hailed on 28.085 by a trucker as I listened for such activity between Chester and Rock Hill, SC on I-77 ("How 'bout that thar Z34 Northbound and down,
break-break"). I plan to make his a** "famous" in the morning as well. I just wrote down his truck tag, company name, and hopefully, we will read about him on the ARRL enforcement page.

>
> I agree with your post with the exception of this little gem. Many folks (like
> six or seven MILLION!) happen to like the 27 MHz CB.

And the question is WHY do they like 27 MHZ? Those that would like to have a local, quiet 2 way radio service would not mind that it happened to be on VHF
and that they now have much less noise and interference. Let's not beat around the
bush: the ones that like 27 MHZ and would scream like stuck pigs are the ones who
are already breaking the laws governing the CB "Service". OF COURSE, they wouldn't like having 27 MHZ taken away because their precious DX, their SSB "clubs", and their assinine "Worldwide-worldwide" foolishness would be eliminated.
Either Congress will HAVE to face the music and restore funding to FCC to regulate
the mess that CB is now, or they will have to face the music and take it away so that
legitimate services can conduct their business unmolested. There is NO "right" to oper-
ate a transmitter; it is a PRIVILEGE granted by the government. If that privilege is
abused, the offender must face the consequences OR the privilege needs to be revoked.

>you are a statist.

Cecil:

I'm all for freedom of mode choice. So much so, that I have no problem with requiring that all HF-privileged hams be tested for knowledge of the Morse code at a useful proficiency level -- 13 - 20 WPM -- for a General or Extra class license, respectively. Of course, that is no longer the case, so, IMO, the "freedom of mode choice" has been drastically reduced for Post-Restructuring hams. How unfortunate.

>bunch of pissed-off pigs, neighbors, and dog-catchers.

That's a good analogy.

Problem is, no one in here (other than yourself and a very few) want
to debate the subject. To most this venue is simply a place to
vent spleens, cuss, and act guru-like. :-)

CB was created in the USA about 43 years ago. Hams of that time
were generally incensed at this terrible intrusion into their precious
spectrum (the small 11m band below the big 10m band) and, worst
of all (!), the FCC taking it away from them! Oh, horrors, the evil
that befell hams! :-)

>I'll tell you what the more likely scenario is, if you can't contain these
>jokers to 11m... the FCC will have no choice but to "expand the pigpen", and
>open 10m up as an unlicensed service.

It seems to me that a group of dedicated hams could just as well
exercise their talents and will by organizing and DF-ing on the
freebanders, logging those times and frequencies and content,
then informing the FCC.

I don't think anyone in here is serious about doing that. It's so much
easier to sit back and bitch and whine about it in a newsgroup. No
real effort and it makes the bitchers and whiners happy?

Back in half the time that CB has been around there were no
cell phones on VHF or UHF. At the end of December 2001
there were no less than 129 million cell phone subscribers in
the USA (statement of the FCC in a Public Notice). That's
about one in every three citizens. In less than two decades
the cellular telephone industry has grown at an explosive rate.

That should be an indicator that new radio services (cell phones
are little two-way radios) can be accepted by the citizenry, can
grow at an amazing rate, and be supported by industry.

CB is only about four decades into its existance and its unlicensed users outnumber all licensed hams by about 7:1 or 8:1. Since the allocated frequency band is small (about 400 KHz), I am surprised that there aren't more freebanders looking for more EM space.

The "tough talkers" in here will come on strong about legality, "technical competency through license testing," and a lot of other noble, good, and true words...but there's little evidence that any of those "tough talkers" among the hams are DOING ANYTHING other than bitching and whining.

Organizing, planning, monitoring, DF-ing, logging are the key activities to reporting illegal operation. Bitching and whining and talking tough doesn't solve any problems.

>"Keep the pigs in their pen".

That's all well and good up to a certain point of usership among the citizens. After four decades of CB and (perhaps) 6 million citizens using CB radios, trying to toss out a band (of any service) that is in-use is like "teaching a pig to sing" (it doesn't acomplish anything but annoys the pig).

The FCC is responsive to citizen demands. It cleared hundreds of MHz in two decades of cutting off the higher TV channels, has made that spectral space available to several radio services. It established the VHF and UHF cell phone bands, a lot of low-power-RF-device spectral places. Those "Part 15" devices number in the tens of millions in the USA now...despite lots of whining and bitching about "raising the noise floor in [UHF] ham bands."

The 10m band is 1700 KHz wide, has been allocated to hams for over 5 decades. That allocation is man-made and NOT an ever-living constant. A divinity did not assign it nor is it a cast-iron guarantee. If some group of citizens wants part of it for a new radio service, the FCC is obliged to listen.

Patriotic rhetoric by hams is a poor reason for retention regardless of hams' emotional feelings. The old 11m ham band went away because of little use by hams with more promise shown by a new radio service called CB. Part of 10m could go the same way.

>
>I disagree. It shouldn't be used here at all.

He LIKES to "talk tough." Makes him feel all manly and strong.

He LIKES the thought of beating up old men. I think he likes
to beat up on women, too.

He is an Amateur Extra. That explains it all? :-)

>> As opposed to Leonard H Anderson who is an "athletic supporter"...and
>one that needs laundering, I might ad.....
>
>Oh boy, jock strap jokes. Some people never grow up.

Some want to abrogate the First Amendment to the US
Constitution in addition to talking filth and pejoratives.

It must be an "Extra thing." Another incentive for upgrading...:-)

>
>How could someone stop the US government from considering someone else's
>comments on a NPRM?

You didn't read it, did you? Of course not...it's on the FCC's ECFS, not
Google.

Go read it and you will understand. Then you can search archives of this
newsgroup for December 1998 to January 1999 and see the
"coincidence" of the same blabbering of that poor baby who couldn't
tough-talk someone else down.

It's all in the public record, Jimmie. You love to search old archives in
Google...go for it.

>You filed reply comments right before the reply comment deadline, and they
made
>it to the FCC ECFS system.

According to the USPS records, I sent my full document package (paper copies
plus disk) 9 days before the deadline. Are you going to be so anal retentive
as to
want evidence of the mail registry forms?!?!? [sorry, that's not on Google]

The deadline for ALL comments on 98-143 was extended to 15 January 1999.
My reply to comments was date-stamped 13 January 1999 according to the
ECFS. As far as I can see, it was perfectly legal, according to procedure
and the FCC's own instructions.

What is your problem with all that? Are you trying for a "piece of the
argument
action" on this thread? Why do you want to argue an old subject that's been
done in here before?

>So any reply comments on your reply comments would
>have to be after the deadline.

So what? The poor baby's SINGLE PARAGRAPH comment was date-
stamped 25 January 1999 by the FCC, ten days after the deadline.
Was it an electronic filing? It couldn't have been a paper filing and be
procedural due to the "coincidence" of commentary in this newsgroup at
the time on 98-143.

Did the poor baby address ANYTHING in my 14 pages of text? NO.
Nothing. All he did was blabber that no one without a license had any
business making any sort of comment. He didn't address one single
part of my document...and there was plenty of text to select a topic.

The ONLY thing in this poor baby's commentary was the whining
about unlicensed citizens commenting and that they should be
disregarded. Poor thing, he was very upset at the time, evident by
the newsgroup postings. Oh, boo hoo by him.

>What, exactly, did he do that has you so wound up?

That former member of the US armed forces (medical discharge)
wants to abrogate the First Amendment rights of citizens, even
for other US military veterans...if the citizen doesn't agree with him.

Now you may not care one bit about First Amendment rights
(you are an Amateur Extra) but I sure do. I took an oath to
defend the Constitution of the United States back in 1952
(before you were born). I took that oath very seriously. So did a
LOT of US citizens, before, during, and after my time.

Do you feel that the First Amendment of the US Constitution
doesn't apply in certain situations regarding Free Speech and
Petitioning One's Government in regards to laws? If so, why?

Why is Jimmie so wound up? He was not a party to the thread.

Is Jimmie upset because other people know about the Grimeton
station in Sweden and its annual one-day test transmissions?

Jimmie, stay with your old 100 KW alternators and OOK CW.
That's history. It's been 80 years since the Grimeton station
planning started, 78 years since it was completed. This is the
new millenium. You aren't authorized to operate either 100 KW
output or at 17.2 KHz.

31. captivating reading

Jim got my inquisitive juices flowing with the RF alternator link, and I found some more interesting stuff.

I found a page:

http://webhome.idirect.com/~jproc/radiostor/reading.html

that has a lot of fascinating reading on it. I highly recommend:

http://webhome.idirect.com/~jproc/radiostor/cw500pt1.html

which is some memoir's of a Coast guard cw op. Many pages-very interesting stuff.

You can get lost in the reading, and there's lots of good CW related stories there. Good nostalgia trip. Even with that, there is an undercurrent of "time marches on-but I'm not sure that dumping cw is altogether the right thing to do.

Class D CB was created 43 years ago. Where are all the AA and OO corps that you brag about and what are they doing?

Amateur radio has had over four decades to do something and there is little evidence that hams are doing anything.

You are just blowing smoke and talking tough. That doesn't cut it.

I never claimed to be a bystander. If it's bystander you want, you'll
have to talk to Len Anderson. I'm actively working stations and putting
them in the log. I said: "At no time did I help or assist anyone in
breaking his government's rules. Anyone who did that did it of his own
volition." I don't think it can be made clearer than that.

If a French station worked me out of his authorized segment, he'd hardly
be able to show a QSL on which was printed a frequency he is not
supposed to use, would he?

> > It is nice of you to be so concerned for the state of amateur radio in

CW is not prohibited on those frequencies. It fact, you'll often hear
it being used since 50.110 is the international calling frequency.

> Dave, you're really funny when your not so smug.

I'm funny even when I AM being smug.

I'm not sure you'd recognize the "naked truth" about much of anything associated with CW even if the words were stenciled on a red hot rettysnitch and applied to your posterior.

The CFO group apparently is no more. The group was a tongue-in-cheek poke at the British based FOC organization. FOC requires a sponsor, a number of seconding nominations and one can be black balled by any member. Worldwide membership is limited to 500.

We did work Dan during Field Day and it wasn't on SSB.

Come on now, Jerry - this thread started out about freebanding CBers
operating on 10m... now you want hams and the FCC to waste time trying
to do something about CBers operating illegally within their own 11m
pigpen - by displacing them to other bands? As you've pointed out,
they don't WANT to go to VHF/UHF - that is clear, because they haven't
already(which has been my point all along regarding the bullshit urban
legend myth that CBers are operating high-powered external amplifiers
on MURS/FRS/GMRS). If the government tried to shut down 11m, and move
these lamebrains to MURS/GMRS, it would be a complete fiasco, for a
number of reasons.

Leave 'em be. Like with the W6NUT repeater... we've got 'em just
where we want 'em.

If you want to do something productive, help track down a few of these freebanders that are operating on 10m, and turn 'em in to the FCC.

But - if the pigs are staying in their pens, who gives a hoot how muddy they get... They're PIGS, that's just the way they are... you aren't going to change anything by trying to move the pigpen to the neighbor's dry little farmyard, they're STILL gonna be pigs, and they aren't gonna want to stay over at the neighbor's house, because they like the muddy conditions(DF) over in the old 11m pigpen.

Have you ever heard of NIMBY?

Tnx for the Qso. I was testing the antenna's. I put up a 40 and a 20 delta loop (vertical) and decided to hit FD from the house to try them out. They seem to do well.

>>> US amateur radio, refusing to allow the US government to consider
>>> another citizen's commentary on FCC 98-143 way back in January
>>> 1999 (after the comment cut-off date).
>>
>>How could someone stop the US government from considering someone else's >>comments on a NPRM?
>
>You didn't read it, did you?

I have read your reply comments, K4YZ's comments, reply comments and supplement, and many others.

I don't see where anyone was

"refusing to allow the US government to consider another citizen's commentary on FCC 98-143"

>Go read it and you will understand.

I have read it. I don't understand how a single-paragraph supplement by anyone could be

"refusing to allow the US government to consider another citizen's commentary on FCC 98-143"

>>You filed reply comments right before the reply comment deadline, and they >>made it to the FCC ECFS system.
>
>According to the USPS records, I sent my full document package (paper copies >plus disk) 9 days before the deadline.

According to the FCC ECFS, that package was accepted on January 13, 1999. Just two days before the reply comment deadline. When those reply comments appeared on the ECFS system is unknown, but delays at that time were typically 48-72 hours or more, because of the volume being received by FCC.

So your reply comments did not appear for public viewing until after the January 15 deadline. You did not file comments, only reply comments.

> Are you going to be so anal retentive as to
>want evidence of the mail registry forms?!?!? [sorry, that's not on Google]

Doesn't matter when they were sent, only when they got to FCC. FCC says January 13.
>
>The deadline for ALL comments on 98-143 was extended to 15 January 1999.
>My reply to comments was date-stamped 13 January 1999 according to the
>ECFS. As far as I can see, it was perfectly legal, according to procedure
>and the FCC's own instructions.

Nobody has said any of it was not legal.
>
>What is your problem with all that?

You wrote of another's

"refusing to allow the US government to consider another citizen's commentary on FCC 98-143"

but failed to give any details as to how that could be done.

>>So any reply comments on your reply comments would
>>have to be after the deadline.
>
>So what?

Exactly!

>The poor baby's SINGLE PARAGRAPH comment was date-
>stamped 25 January 1999 by the FCC, ten days after the deadline.
>Was it an electronic filing? It couldn't have been a paper filing and be
>procedural due to the "coincidence" of commentary in this newsgroup at
>the time on 98-143.

Ah. What you meant by

"refusing to allow the US government to consider another citizen's commentary on FCC 98-143"

was a single paragraph in which K4YZ said the FCC shouldn't act on your suggestions.

>Did the poor baby address ANYTHING in my 14 pages of text? NO.
>Nothing.

Actually, he did. You wrote at length about your qualifications to reply to comments on the NPRM, and he questioned those qualifications and your motivation and attitude towards the amateur radio service. All within the rules.

>All he did was blabber that no one without a license had any
>business making any sort of comment.

So what? He also acknowledged free speech rights. Seems like you think free speech only applies to you and not to those who disagree with you.

Everyone has the right to petition the FCC. But that right carries with it the right of others to challenge the stated opinions, and the qualifications of the person presenting them.

> He didn't address one single
>part of my document...and there was plenty of text to select a topic.

He addressed your qualification to reply to comments, and your motivation and attitude to do so.

>>What, exactly, did he do that has you so wound up?
>
>That former member of the US armed forces (medical discharge)
>wants to abrogate the First Amendment rights of citizens, even
>for other US military veterans...if the citizen doesn't agree with him.

How? By a single-paragraph supplement that says, in effect, 'don't listen to X, he doesn't have the best interests of the ARS in mind'?
You gotta be kidding!
>
>Now you may not care one bit about First Amendment rights
>(you are an Amateur Extra) but I sure do.

Ah - classic ad hominem attack there.

> I took an oath to
>defend the Constitution of the United States back in 1952
>(before you were born).

So what? That's part of HISTORY. Old stuff.

>I took that oath very seriously. So did a
>LOT of US citizens, before, during, and after my time.

Including K4YZ.
>
>Do you feel that the First Amendment of the US Constitution
>doesn't apply in certain situations regarding Free Speech and
>Petitioning One's Government in regards to laws?

Sure.

But not all speech is protected. Speech which is false is not protected. Speech which is a clear threat to national security is not protected. Obscenity is not protected.

Nobody tried to impede your free speech or right to petion the FCC.

This is basic Civics 101 stuff. Obviously you don't understand that both your speech and K4YZ's were heard by the FCC.

>Why is

(N2EY)

> so wound up? He was not a party to the thread.

I'm not "wound up" at all. I'm just curious as to how an individual could be

"refusing to allow the US government to consider another citizen's commentary on FCC 98-143"

as you keep claiming.

>stay with your old 100 KW alternators and OOK CW.
>That's history.

Sounds like you want to deny MY free speech. You don't want me to point out how petty and illogical your claims are. You want those who disagree with you to just shut up. Particularly when we make valid points. Not gonna happen.

All reply comments have one basic element in common: They consist of A saying 'don't pay any heed to what B has written. B's arguments are not valid, and here's why'. Your reply comments consisted mostly of saying why the FCC should not heed the comments of one Michael P. Deignan. K4YZ's supplement to his reply comments consisted of saying why FCC should not heed your reply comments. Door swings both ways. Who is denying free speech? Look in the mirror, Mr. Anderson - it's you.

>You aren't authorized to operate either 100 KW output or at 17.2 KHz.

Neither are you.

Of course, it could be that you are not serious about any of this. Seems to be the only logical conclusion.

Go to the ARRL website and read their VE manual. They have some paragraphs in the beginning that should clarify the situation.

But a short summary is that in the 1980's, the VEC's were created to replace the system in use at that time by the FCC. The VE's coordinate through the VEC's

The VE's volunteer effort is to the VEC. If you have to assign the "boss" position, assign it to the VEC.

There is plenty of info there related to any payments and fees and where they go.

If you want to insist that the VE's work for the FCC because they are doing work that the FCC used to do, perhaps I am working for the person who used to do my job?

The job has changed. The VE's are working for the VEC's.

These are the number of unexpired FCC ARS licenses held by individuals
on the dates listed:

As of May 14, 2000:

Novice - 49,329
Tech - 205,394
Tech Plus - 128,860
General - 112,677
Advanced - 99,782
Extra - 78,750
Total - 674,792

As of June 30, 2002:

Novice - 37,653 (decrease of 11,676)
Tech - 241,729 (increase of 36,335)
Tech Plus - 77,881 (decrease of 50,979)
General - 138,555 (increase of 25,878)
Advanced - 85,134 (decrease of 14,648)
Extra - 102,167 (increase of 23,417)
Total - 683,119 (increase of 8,327)

I agree. The QPC and the VEC need to create another test element called
"history and nostalgia," require a perfect score, and make it more valuable
than all the rest of amateur radio combined.

Gareth,

In answer to your question - No. It'll never be the time.

Also, judging by your other postings using many different identities, I don't believe that you are in possession of all of the facts surrounding what is contained within the Foundation License course, and what is involved in taking the assessments and the exam.

Furthermore, I cannot see how inciting overseas radio amateurs to not communicate with entry level UK radio amateurs could possibly improve matters.

All it will achieve is to prevent those entry level UK radio amateurs who want to from progressing to higher levels.

Basically, it is pointless to even suggest taking this course of action, but then one can see that most of your postings are pointless and devisive.

...and I'm sure that if you do indeed reply to this posting, it will be just as pointless as all of the others.

You claim to be helping the hobby, but you are having just the opposite effect, and I believe that you are fully aware of it.

You seem to be constantly attention seeking for one reason or another...

Dave, impossible. A little logic is required here. If they're operating
out of band, and they are in your log book, and you aren't an innocent
bystander, then you assisted them in breaking their government'r rules.

> > > You are right about QSLing though. I had no responsibility for QSLing

Dave, why not? Is it now illegal to show off postcards in France? The
illegal act was making the emission out of band, not showing off a postcard.

Yep. So did mine. But when FCC woke up and corrected that mistake a few
years later you didn't have what it took to get it all back. Till the
Grate Dumdown.

Is that what you call it when your dial reads 27.575 MHz? You just wandered
outside your authorization?

Perhaps the FCC has another unwritten rule that makes it OK.

Nothing bizarre about it. It's the natural spot for a boot to strike. To
say nothing of a redhot rettysnitch.

See Jim? If you aren't on his List you aren't anywhere. Of course the
fact that he couldn't recognize a first class CW op if he tripped over
one has nothing to do with it.
Just more drivel from The Gadfly.

That "little" logic diminishes with each passing second. Dave, you're
completely responsible for that fraudulent French station keying his
rig to answer your CQ, or to call you first, whichever the case happened
to be. Accept your responsibility like a man, fess up and throw yourself
on the mercies of Judge Riley's court.

Dave has mentioned my posterior time and again. Now you both seem to be
into torture with the red hot poker.

And I figured a little girl like you would try to kick me in the front.

As Dave works bootlegger after bootlegger and word gets out that he's even
QSLing them, the line just keeps getting longer.

Why would he do something like that?

So then after reading all these posts, I can assume that most of you Hams
are in favour of the M3 Persons. I really don't see what all the fuss is
about, I have tried to do the full licence but I failed (twice) My Brother
has been a ham since the age of 15 his callsign is GI8WAZ,
Yes I an from N.Ireland but does that give the so called snobs on this N.G
to call me and others Turnip Heads. I can name at least 10 hams in my area

of Leeds still using C.B . I do not use it as I do not like to listen to music and bad language all day.All I want is to take part in Ray Net.
So if any of you are in favour of the m3 please help us , we are not allways going to be m3. I want a full licence but I have to start further down the ladder and work my way up. As for you snobs

TUFF TITTIES OLD MAN What What

Regards

Michael Savage. G.C
P.S for someone who is meant to be a turnip head, the G.C is for George Cross, which was earned, so as for standards some of you have not got a clue.

Regards,
Michael.

Lennie, What REALLY sickens me about the likes of you is that as soon as YOUR opinion is differed with, you run and "hide" behind a perceived violation of your "rights".

Your rights were not violated in any way, shape or form.

All comments were made in an open, public forum.

Your comments were read right along with the other peoples, as they are here.

>I took an oath to
>defend the Constitution of the United States back in 1952
>(before you were born). I took that oath very seriously. So did a
>LOT of US citizens, before, during, and after my time.

And now you are cowering behind it...AND wrapping yourself up in the same "patriotic bunting" that you accuse others of doing.

None of it will hide the stench of your lying and ranting in here.

As for my comments to the FCC, I have apologized to you in this forum before, and you ahve never acknowledged it, ergo I can only assume you LIKE having something to whine about.

So get over it, Putz.

Steve

>If YOU stop . . . he will stop . . . eventually.

I disagree, Val. If you follow Lennie, he still likes to trash the NG with his tripe even when being completely ignored. The only thing that will "stop" Lennie will be cardiopulmonary arrest.

If you follow him back far enough on Google, he used to post to other NG's, and was even nice about it. Had some insightful things to say, but as soon as RRAP was created, became very spiteful and demeaning. Anyone who was anything he was not, in this case licensed Amateurs, (and especially Extra class licensee's...the epitome of Amateur Radio) catches his rath if they dare to tread on his "turf".

Unfortunately, in my profession (Nursing) it is not uncommon at all to see people who are at end-stage in life begin to react like Lennie has. Even people who may have been reasonably productive in life begin to lash out as they realize that life is almost over for them, and they may not have accomplished all that they set out to do.

That is ever-so-evident in Lennie's posts. I am sure that Lennie has envisioned himself as some sort of mentor ala-Doug DeMaw, W1FB (now SK), but for whatever reason, his "help" was not as readily accepted, and now he's lashing out at those who "dissed" him.

The really disheartening thing is that it's easily "fixed" in Lennie's case. In some of his earlier posts in other NG's, it actually sounds as if he had a decent listening post of his own. The only thing that keeps it from being a radio station instead of a listening post is his own pride and 30 minutes at a VE session.

Too bad for him.

Unlike yours, my dial NEVER reads 27.575. What frequency is that, one
of your favorites?

> Perhaps the FCC has another unwritten rule that makes it OK.

If you don't believe that FCC views a ham operating outside his license
authorization, but still within an authorized ham band, as opposed to
operating outside of any authorized ham band, to be two vastly different
cases, it's because you just don't know any better. Mind you, it's a
violation of rules, but a vastly different level of violation. Of course
to your trolling mind, driving 56 in a 55 zone is jail time. So put
everyone in jail.

You insist that Dave is responsible for some French ham working outside HIS autoirizations just because Dave did talk to him. That makes you a blathering idiot. Yet again.

Unlicensed CB-type communications is commonly found in the
5,6,8,10,12, & 15 mHz bands. Most of it originates from the
USA and is land based communications. HF comms equipment
is sold throughout the U.S., and maritime equipment is particularly
popular with these "freebanders." The enforcement authority in the
U.S. is the FCC, which closed down all its monitoring facilities
six years ago. The FCC feels by pretending there is no problem that
they will not have to deal with it. Meanwhile, the problem grows
larger each year. My company is licensed to use HF freqs., and we
are jammed all the time by HF freebanders in the 6, 8 & 10 mhz
bands.

No advance is required, merely the use of an antiquated code. Using
this code seems to have a detrimental effect on the mental faculties
of the victims, as witnessed by your drivellings.

If a little logic is required, try applying it. I don't assist someone
by operating where I am permitted to operate. The individual who
decides to key his mike or operate his morse key breaks his country's
regulations by doing so in a band segment where he is not permitted.
```

He does that whether I reply to him or not.

If you robbed a convenience store and got away with it, you'd not likely
be showing your pals an 8 x 10 glossy of you doing so. If you are a ham
who has worked some DX outside your authorized band segment, you'd not
likely wave about a QSL card which proves that you broke your country's
regs.

No, being right when I say it makes it so. Are you personally
responsible for every goober who breaks an amateur radio reg?

In a nutshell, the answer is YES. They WERE using morse using the
Farnsworth method, "real" morse code and SSB.

My comment wasn't designed to titillate you, Brian. If it made you feel
tingly all over, try to control yourself. I'm not responsible for your
misinterpretation of anything I write any more than I'm responsible for
the illegal operation by French hams.

Not at all, Brian. You misinterpret my deeds as misdeeds and you
certainly have overestimated their importance. In the course of doing
so, you've provided lots of laughs.

I enjoy seeing Brian's self-righteous indignity over things like this
and using the Farnsworth method to test amateur license applicants.
I note that he has still not contacted the French PTT or the FCC over
the respective "issues".

Then perhaps you can understand why some of us are not keen to import
CBers and their filthy habits into amateur radio?

>All I want is to take part in Ray Net.

Very commendable, I'm sure. However, an M3 licence will not help you
there .... M3's are not allowed to carry traffic on behalf of user
services.

Why do you not try the Novice (Intermediate) Licence Course?

You should be ok. However I heard that M3's cannot pass third party traffic.
Don't know if this is true, subject to change or it was missed out in error.
Might be worth checking if this is your only reason for going for M3. Guess
there are ways around the problem if it is one (club call perhaps)

Sorry for the mis-attribution, Brian. I should have
made it clear that I agree with your point about
imprecise code-testing standards. BUT I, and only I,
think America is "at risk" from sloppy CW.

Seriously, I think this Farnsworth/Standard Morse
thing was why I failed a number of code tests way
back when. I was making my own code tapes for
practice in the car on my way to and from work then.
The program I used (on my old TRS-80) did have
provisions for varying the word and character
spacing. But I didn't use them since I thought
I would be getting "standard" Morse. When I sat
down to copy at the exam, their code always
sounded "faster". (It also was lousier, being
sent on a 98-cent piezo buzzer with a rough, 2 kHz
tone. My own tapes used the 700 Hz sidetone
from my Icom IC-720 that had very smooth keying.)

These experiences convinced me that if the FCC was
going to entrust its licensing tests to "amateurs",

then they needed to spell out the testing procedures
in painstaking detail in Part 97, including the
mandating of informing the examinee of all waivers,
accomodations and options available to him or her.
And being able to request variable speed and tone
is right on the top of the list.

Hope this clears things up.

Why should I want it all back? I wasn't even on HF from 1971-1987. By
1987, I had the Advanced and never needed to do anything that I couldn't
do with an Advanced license. Why obtain a higher license than needed?

That is incorrect.

Class A and Class B CB (UHF) were created in the USA in 1948. That's
54 years ago. Class C and D CB (27 MHz) were created in the USA in
1958.

Now be a big boy and admit your mistake. ;-)

> Hams of that time
> were generally incensed at this terrible intrusion into their precious

> that befell hams! :-)

Should the hams of the time have simply allowed the reallocation of
the band without protest?

Hams dislike being blamed for RFI caused by CB users. Hams who have
earned licenses and comply with the rules also dislike being
categorized with unlicensed folks who break the rules. It's a bit like
serious astronomers being confused with astrologers.

> >I'll tell you what the more likely scenario is, if you can't contain these

Sounds like a plan. But it is important to note the source of a
problem, rather than simply attack the symptoms. Many of the invaders
are not in the USA at all.

> Back in half the time that CB has been around there were no
> cell phones on VHF or UHF. At the end of December 2001

> the cellular telephone industry has grown at an explosive rate.

Sure - as part of an overall growth in telecom over the past 20 years
or so. Note, however, that the telecom bubble has burst. WorldCom's
admission of billions of dollars of accounting goofs is simply one
example.

> That should be an indicator that new radio services (cell phones
> are little two-way radios) can be accepted by the citizenry, can
> grow at an amazing rate, and be supported by industry.

Because there is money to be made, and the cellphones are under the
control of the industry (for the most part).
>
> CB is only about four decades into its existance and its
> unlicensed users outnumber all licensed hams by about 7:1
> or 8:1.

Pure speculation, probably wishful thinking. FCC gave up licensing CB
a quarter-century ago. Without licenses or other registration, how can
you determine the number of CB users with any accuracy? The ratio
could be 1:1 for all anyone knows.

How do you KNOW how many CB users there are? You claim there are
roughly 4.7 to 5.4 million of them - how did you get those numbers?

25 years ago, 27 MHz CB antennas were a common sight on vehicles and
homes in this area. Today they are rarer than ham radio antennas. Even
truckers are turning to MURS, cell phones and other radio services.

> Since the allocated frequency band is small (about
> 400 KHz), I am surprised that there aren't more freebanders

> and talking tough doesn't solve any problems.

Why is it the responsibility of hams to act as enforcement agents for
the FCC, particularly when the violations are committed by nonhams?
Are the free speech rights of the law-abiding unimportant?

> The old 11m ham
> band went away because of little use by hams with more
> promise shown by a new radio service called CB.

Incorrect.

11 meters was reallocated by the FCC for two reasons:

1) The FCC could easily reallocate it under the treaties in effect at the time.

2) Low powered channelized AM voice equipment for 27 MHz could be manufactured inexpensively using late-1950s technology.

It was not a smart choice by the FCC.

FCC intended CB for short-range business and personal communications. They never thought that large numbers of users of the new service would simply ignore FCC rules. But that's what happened, and FCC found it had created a mess without the resources to clean it up.

In the mid 1970s there was an effort to clean up the mess by creating "Class E" CB - by reallocating the 220-225 MHz ham band to channelized FM. "Industry" (the EIA) liked this idea, in part because almost none of the 27 MHz equipment and accessories would be usable on 220-225. CB users hated it for that reason, and others (like no "skip" and more-expensive "linears"). End result was 40 channel CB - on 27 MHz.

> Part of 10m could go the same way.

Sounds like you would like for that to happen.

The inmates -are- in charge of the asylum. They didn't agree with the FCC dropping the 13wpm exam, thus its back thinly disguised as 13-15wpm Farnsworth. Who says the standards have been lowered?

Some mistake! 27 MHz CB is not 43 years old?

> Hams dislike being blamed for RFI caused by CB users.

Hams dislike being blamed for RFI caused by even Ham users. They dislike it
so much so that they say they DON'T cause it. The ARRL position is that it
isn't cause by amateur RF emissions. Its caused by poor design of the
consumer electronics device being interfered with.

Hams who have
> earned licenses and comply with the rules also dislike being
> categorized with unlicensed folks who break the rules. It's a bit like
> serious astronomers being confused with astrologers.

I also dislike being categorized with licensed folks who break the rules,
such as the ARRL and W5YI VECs, Dick sending bad code, and Dave working
French hams out of band. Time to clean up our act!

> > >I'll tell you what the more likely scenario is, if you can't contain

> the FCC, particularly when the violations are committed by nonhams?

It's not the responsibility of hams to do this, but it could be considered
community service. If a ham has enough free time to learn Morse Code at
20wpm, then DFing a couple of hundred freebanders shouldn't be any big deal.

> Are the free speech rights of the law-abiding unimportant?

DF the law-abiding? Whatever for?

And? Why did they do it?

Then why a 10-10 organization? Maybe they didn't want to lose 10M, too?

> It was not a smart choice by the FCC.
>
> FCC intended CB for short-range business and personal communications.
> They never thought that large numbers of users of the new service

Its when you reply (and QSL) that encourages the others to also break the
law.

Is it a law that you must reply to people that you know are operating out of
band?

Dave, do you really think they would have made those illegal transmissions
if "rare dx" wasn't going to answer and qsl them?

Good grief.

I don't overestimate their importance. Should you get a pass on the wrong
things you do just because they are minor in importance?

If Dave stopped completing QSOs once he found out that they were out of band, that would be the end of the story. But to continue racking up contacts, QSL cards, and possibly greenstamps makes one wonder what his motivation was.

BULLSHIT! multiple complaints are filed. The "unmanned"
system is a joke, just that, it is never manned and broke most of
the time. One give a shit jackass sitting in Laurel MD is not and
never will be "monitoring." Last year an unlicensed pirate
station operated within five miles of Laurel MD for months, and the
wizards at the "unmanned" facility never detected it. A collection
of flashing lights, bells, and computer screens set up just to impress
visiting congressman and other fools. Monitoring? Never!

>never will be "monitoring."

I won't get quite as "verbose" as this poster, Phil, but I ahve to agree
to some of it in part.

In 1991 and 92 I was a member of a radio club in SoCal that provided (in
person) over 60 signed complaints to the resident engineer in Long Beach over
the operatoions of ONE person in Costa Mesa.

His response was to turn it over to the ARRL Auxiliary. When the
Auxiliary approached the individual concerned, he used a considerable amount of
profanity and physical threats.

The matter was turned back over to the EIC. That's where it stopped, too.
Not a thing was done despite the fact taht this individual continued to jam
other Amateurs throughout Orange, LA and Riverside Counties.

>Last year an unlicensed pirate
>station operated within five miles of Laurel MD for months, and the
>wizards at the "unmanned" facility never detected it.

We gave the EIC names, addresses, frequencies, times and recordings of the
alleged offenses. Nada.

Oh well...I can only hope that the recent efforts of Riley & Co. have
given new energy to rules enforcement and that such situations are fewer and
farther in between.

>Who said it was an amateur station?

Jim, isn't it amazing how Lennie can use that "commercial, NOT Amateur" argument to try and belittle you somehow, yet when the same analogy is brought to bear on HIM, it's "non-sequitor"...???

Does he not see how silly he presents himself?

>>Write it up for QEX as "high technology" for the new millennium!

Lennie does not realize that there are many here for whom such historical tidbits are not normal fare, but intriguing nonetheless.

....of course such historical tidbits are "OK" when they are retold in the course of posts made by rear area widgets claiming hero status by association from the Korean War era.....

What have you done to follow-up on said complaints? Has your
attorney had a sit-down with Charlie Megan if you think that
they shoukld be given hugher priority?

If you expect things to happen by themselves you are seeing the
results of such waiting.

>One give a shit jackass

Your command of the English language is exquisite....

If you think someone is not doing his job, file a complaint with the
Inspector General.

>sitting in Laurel MD is not and never will be "monitoring."

Depends what you call "monitoring". If you are thinking of the
classic "cruising" where someone is spinning the dial up anf doen
the bands looking for signals that shouldn't be there, forget it
with present staffing.. The Congress was very clear in its slashing
of posiitions in 1996 that they are not interested in spending money
on radio enforcement, especially the manpower necessary to do cruising
as compared to folks who deal with wireline carrier competition, media
conglomeration, and getting new non-licensed wireless gadgets into the
hands of the know-nothing public.

The system is designed and used for long-range spot-frequency
HF DF-ing on call, so to speak, and for HF band occupancy
studies in connection with international surveys.

Is your problem that you don't have an on-call priority like the
military and Federal law enforcement folks do?

>Last year an unlicensed pirate station operated within five miles of
>Laurel MD for months, and the wizards at the "unmanned" facility never
>detected it.

Pirate in what service? If it was that close to the station the
case would have been in the jurisdictionof the field investigator
(single) for action as appropriate depending on the priority assigned
which depends on where in the spectrum the signal is and who filed the
complaint.

>A collection
>of flashing lights, bells, and computer screens set up just to impress
>visiting congressman and other fools.

Are you a salesman for Zrta Systems who were POed because we
didn't buy their DoD-overrun packages (as I and several others
had recommended)?

My man at Laurel assures me that the system works very well for
its intended purpose - long range HF DF to the precision to put a
mobile DF unit close enough, or for sitting on a specific frequency
for a specific purpose.

>Monitoring? Never!

Or at least until The Congress breaks loose the funds for
cruising.

>farther in between.

If you read my reply post to Robert Abrams you will see that I made
a stromg point on priority. At the time in question, amateur
enforcement had a headquarters-mandated very low priority because
there was a split in philosophy between the folks who did the work
(Field Operations Bureau) and who disposed of the case (Private
Radio Bureau). When the two functions were finally brought under one
roof several years later and Riley took over the helm, the log-jam
was broken.

I won't comment on the action or inaction of other EICs. I know what
my manpower problems were. My boss would get very bent out of shape
when (not if) I tried to get some amateur cases worked on.

That was then. This is now.

Perhaps this explains why you are so confused about Morse code testing, Brian.

Morse code testing does not change the laws of physics.

Jim, good point. They should take a hint from what happened in America and
not divide the service.

Incorrect. As pointed out in another post, Class A and Class B CB (UHF, 460 MHz region) were created by the FCC in 1948. That's 54 years ago.

Now be a big boy and admit your mistake, "Lenover21". Set a good example for young Brian.

So what? All that means is you are old, and got licensed when the standards were very low. When the standards were raised, you did not rise to the challenge, but simply rested on your rosy red laurels until the standards were lowered again.

Fact is, I have more experience on amateur radio HF/MF, and CW, than you do, Cecil. And I'm not an expert by any means.

>
>Finally the why.
>
It was a dumb move by the FCC. But the FCC could not and cannot say "We made a really dumb move", so they have been trying to contain the porcines for four decades or so.

That was an "insult?!?"

Oh, my, expressions of amazement are now "insults!"

OK, I'll spread the word: "Nobody is allowed expressions of
amazement or even exhulation!"

Is that better?

>>Radio station Grimeton does an annual one-day transmission
>>from the museum in Halland Lan. It's part of HISTORY.
>
>So? Is there a problem?

Grimeton's VLF alternator hasn't been used for communications
in years. Last year they "sent a royal message" from HRH King
Gustav. :-)

>>There's no real call for 17.2 KHz communications nowadays, is it?
>
>Tell it to the US Navy. NAA is still on the air.

You can tell it to me...been close to that frequency FOR the
USN. Sorry, no details except that I was in another state at
the time. :-) [it's a Title 18 thing, you see...]

>>"No active devices!" Wow...and coming right behind a link to
>>Grimeton site with those Alexanderson alternators whining out
>>the KiloHertz by the KiloWatts!
>
>You sure sound jealous.

Oh, oh...FLAME WAR IGNITION ALERT!!!

"Jealous!" :-)

No, not jealous, squeamish about the high EM fields and their shielding
for VLF station personnel. Maybe it was a personal thing, not being
around great big alternators and all that older stuff. I wasn't happy
about being in MegaWatt Land.

>>Write it up for QEX as "high technology" for the new millennium!
>
>Real engineers know that solutions to modern problems can sometimes be found
in
>the ingenuity of the past. "Old" does not always equal "obsolete" or "bad".

OK, then I'll talk to the folks at Jim Creek, WA, and another place in the US
Midwest that the USN "is doing it all wrong" with "modern" VLF equiment
using tubes and solid-state devices. It should be MECHANICAL and ROTARY.
I'll tell them YOU are the one who thinks they should be truly modern. :-)

>>Doesn't have anything to do with amateur radio policy, does it?
>
>So what? Neither does anything you post.

Now, now. :-)

Calm down. Remember that your demeanor on here reflects heavily
on the amateur radio service...

>I have read your reply comments, K4YZ's comments, reply comments and
>supplement, and many others.

Bully for you. :-)

Next you will tell everyone that you are a "fair and impartial judge"
and the hall will explode with laughter.

"Heah come de judge! Heah come de judge!" :-)

>According to the FCC ECFS, that package was accepted on January 13, 1999. Just
>two days before the reply comment deadline. When those reply comments appeared
>on the ECFS system is unknown, but delays at that time were typically 48-72
>hours or more, because of the volume being received by FCC.

Does that make them "invalid," or what, judge?

>So your reply comments did not appear for public viewing until after the
>January 15 deadline. You did not file comments, only reply comments.

Ah, so the bench wants to "throw it all out as inadmissible?!?"

>> Are you going to be so anal retentive as to
>>want evidence of the mail registry forms?!?!? [sorry, that's not on Google]
>
>Doesn't matter when they were sent, only when they got to FCC. FCC says
>January 13.

Was that within the deadline or was it not? [the deadline was 15 January 1999]

You ARE anal-retentive, aren't you?

>Nobody has said any of it was not legal.

Oh? Then why are you making such a hissy-fit about it?

>but failed to give any details as to how that could be done.

Then you didn't do the "required" Google search, sport. Go check
the archives of this newsgroup on the dates I gave, judge. The
poor baby just HAD to take his newsgroup argument to the
government to try to win his case. Oh, boo hoo, some Extra
couldn't win his case in a newsgroup so he tries a higher
venue to continue his "argument." :-(

>So what? He also acknowledged free speech rights. Seems like you think free
>speech only applies to you and not to those who disagree with you.

You seem to think that your opinions MUST predominate in this
newsgroup, up to and including a lot of LOOKING THE OTHER WAY
when PCTA Extras use liberal amounts of profanity, inuendo, and
personal insults.

Poor baby. You want open warfare in words? Do you defend others'
misuse of civility as "rightful?" Do you consider harrassment and
personal insults "discussion" or "debate?"

You apparently do because you condone all those actions because
out say so little about PCTA hams' years-long postings.

Everyone gets the picture clearly.

There's a double standard. Anything, absolutely ANYTHING is "free"
if another is in agreement with your opinions. Anyone having
differing opinions becomes a target for implications of wrongdoing,
illegalities, with absolutely no hesitation to use libelous personal
insults.

No problem. It sets an example of some in amateur radio of today,
their attitudes, their behavior.

>> CB was created in the USA about 43 years ago.
>
>That is incorrect.

:-)

Reading problems? Look at the word before "43."

Is that or is that not the word "about?" Do you need a dictionary definition for "about?" Would you like me to change "about" to "approximately" or possibly "nearly?"

2002 - 1958 = 44. Now, what was the MONTH of the FCC R&O creating Class C and D Citizens Band radio service? Are you going to quibble about FRACTIONS of a month and make a big federal case out of that? :-)

Hmmm...let's see...Jimmie was a tiny child when the Class D R&O was made law. I was a working adult then, also a year later (in 1959) when I bought an E. F. Johnson Viking Messenger Class D CB and installed it in my car (1953 Austin-Healey sports car, later into a 1960 Chevy convertible). Did Jimmie have a driver's license back then? [LICENSING is very important to Jimmie, yes?] :-)

I guess it's terribly, terribly important to be supremely accurate on time spans with Jimmie...especially if they are within his own life experience. :-)

Tell you what...I might take out a full-page ad in RF Design News magazine anouncing this TERRIBLE ERROR that did not make "about 43" be EXACTLY 44 years ago. Would that please your royal whatever? :-)

>> Hams of that time
>> were generally incensed at this terrible intrusion into their precious
>> spectrum (the small 11m band below the big 10m band) and, worst
>> of all (!), the FCC taking it away from them! Oh, horrors, the evil
>> that befell hams! :-)
>
>Should the hams of the time have simply allowed the reallocation of
>the band without protest?

Ho ho ho...big INCOMPLETE HISTORY buff! "Hams of the time" DID protest and in every venue they could find...including audiences at work where most folks didn't give a damn about their protests. Oh, the evil of it all...the ungodly allowance of ORDINARY CITIZENS on the sacred ground of HF without so much as taking one radio operator test! Oh, oh, oh...and NO morse code test involved! Oh, oh, oh, the terrible shame of it all! :-)

The FCC listened to all sides and made the decision. The 11m band wasn't used much at all by radio amateurs at the time. Hams had their biggest HF band just "next door" in the spectrum, all 1700 KHz of it...same as what they have now.

The creation of CB was OVER FOUR DECADES AGO, renowned history lister. That's approximately two generations ago.

You were NOT aware of the climate then, took NO part in it, indeed COULD NOT, yet you make yourself sound like an "expert witness" to the times...and then you demand absolute accuracy. All you have is a lot of emotional claptrap working on a band that was taken away from radio amateurs way back before you could possibly be licensed.

>Hams dislike being blamed for RFI caused by CB users.

You have polled every single US licensed radio amateur for this gem?!?!? Oh. YOU "represent" all of them! [I should have known]

>Hams who have
>earned licenses and comply with the rules also dislike being
>categorized with unlicensed folks who break the rules. It's a bit like
>serious astronomers being confused with astrologers.

Make up your mind. First you jabber about happenings over four decades ago and now you switch to the here and now. Try to stay in focus...and we will get the picture clearly... :-)

Are you hinting at ALIEN INVADERS?!?!? Did you rent a video of "Independence Day?"

:-)

>> Back in half the time that CB has been around there were no
>> cell phones on VHF or UHF. At the end of December 2001
>> there were no less than 129 million cell phone subscribers in
>> the USA (statement of the FCC in a Public Notice). That's

>> about one in every three citizens. In less than two decades
>> the cellular telephone industry has grown at an explosive rate.
>
>Sure - as part of an overall growth in telecom over the past 20 years
>or so. Note, however, that the telecom bubble has burst. WorldCom's
>admission of billions of dollars of accounting goofs is simply one
>example.

OH WOW!!! STOP THE PRESSES!!! Insert a SPECIAL
BULLETIN underbar on the video and prep the news team!

128,700,000 Cellular telephone subscribers have all been
PUT OFF THE AIR according to Jimmie!!!

Fraud by one corporation's executives has NOW NEGATED
TELECOM ENTIRE!!!

Film at eleven...

>> That should be an indicator that new radio services (cell phones
>> are little two-way radios) can be accepted by the citizenry, can
>> grow at an amazing rate, and be supported by industry.
>
>Because there is money to be made, and the cellphones are under the
>control of the industry (for the most part).

Oh, oh! Evil MONEY brought up in the picture!!!

Why are you making some kind of federal case on EVIL MONEY
"justifying" a new radio service? Is the EM spectrum to be
awarded only for non-profit, noble, good, and saintly "free" use?

Hey...doomsayer of evil capitalists...have HRO give away radios
to hams or at least AT COST...let the ARRL give away member-
ship and books and periodicals...because MONEY and PROFIT
are evil! Sounds like what you are implying... :-)

>> CB is only about four decades into its existance and its
>> unlicensed users outnumber all licensed hams by about 7:1
>> or 8:1.
>
>Pure speculation, probably wishful thinking.

Well, Mr. Error-Spotter, the EIA (Electronic Industries Alliance,
formerly Electronic Industries Association) used to keep tabs
on different electronics product areas manufactured and sold.
Some figures remembered from a dozen or so years ago had
the number of CBs sold at over the ten million mark.

I don't say that all of them are still being used. I'm not even
into "wishful thinking" even though you insist on a sideways
pejorative by putting that phrase into your nastygram.

>FCC gave up licensing CB a quarter-century ago.

Are you going to issue another hissy-fit about EXACT number
of years? :-)

>Without licenses or other registration, how can
>you determine the number of CB users with any accuracy?

While the hills of my residence area make NVIS techniques
almost a must on HF, there are still a couple low points to
Interstate 5 which runs past only a mile away (four lanes each
direction, a major vehicle route for the L.A. area). ANY HF
receiver tuning the CB band will result in an abundance of
heterodynes, enough to make this part of the urban area
next to useless for CB.

>The ratio could be 1:1 for all anyone knows.

Is this "wishful thinking" on your part? :-)

How did you arrive at that ratio? Is it ACCURATE?

You can't stand the slightest ERROR...how can you live with
yourself on posting INEXACT numbers?!?

>25 years ago, 27 MHz CB antennas were a common sight on vehicles and
>homes in this area. Today they are rarer than ham radio antennas. Even
>truckers are turning to MURS, cell phones and other radio services.

WOW! You'd better write an Op-Ed piece for QST and lay into
those evil radio users! Good grief, lowly truckers using ANY
kind of radio for their jobs!

>> Since the allocated frequency band is small (about
>> 400 KHz), I am surprised that there aren't more freebanders
>> looking for more EM space.
>
>Why are you surprised? Do you think freebanding is somehow justified?
>Sounds like it.

FLAME WAR IGNITION ALERT!! Jimmie wants a FLAME WAR!!!

Casual listening on HF doesn't reveal to me any sort of DRASTIC
CAUSE FOR ALARM about freebanders. All two of them heard
don't sound like there is an "invasion of the spectrum snatchers."

Yet you want to make everyone think I am "supporting freebanders!"

Misdirection, misdirection. Tsk, tsk, tsk.

>Why is it the responsibility of hams to act as enforcement agents for
>the FCC, particularly when the violations are committed by nonhams?

I'd call it an aspect of "citizenship." You ever hear of "citizenship"
or "civic duty?"

If unlawful RF transmission occurs WITHIN amateur radio bands,
are you going to sit around and DO NOTHING? Will you wait for

the ARRL to your job for you on reporting?

Or will you just sit around newsgroups and make yourself sound
all-important, all-knowing, and starting flame wars with those who
don't share your opinions?

>Are the free speech rights of the law-abiding unimportant?

SAYING NOTHING is a weird, perverse way to exercise "free
speech." :-)

>> The old 11m ham
>> band went away because of little use by hams with more
>> promise shown by a new radio service called CB.
>
>Incorrect.

Prove your charge. [go ahead, don't bother to make my day... :-)]

>FCC intended CB for short-range business and personal communications.
>They never thought that large numbers of users of the new service
>would simply ignore FCC rules. But that's what happened, and FCC found
>it had created a mess without the resources to clean it up.

OK. Do you think the FCC has "ignored" the experience?
Do you think the FCC will go ahead and make other new radio
services with the same arrangement of regulations? The FCC
has made a large number of new radio services in the four decades
since CB was created.

Yes, everyone gets the picture...if the FCC doesn't satisfy YOUR
wishes or the ARRL's wishes, then the FCC is making a "dreadful,
evil, stupid mistake." Of course... :-)

>In the mid 1970s there was an effort to clean up the mess by creating
>"Class E" CB - by reallocating the 220-225 MHz ham band to channelized
>FM. "Industry" (the EIA) liked this idea, in part because almost none
>of the 27 MHz equipment and accessories would be usable on 220-225. CB
>users hated it for that reason, and others (like no "skip" and
>more-expensive "linears"). End result was 40 channel CB - on 27 MHz.

Now, now...two and a half decades ago in ANOTHER radio service
wasn't part of the subject thread. Why do you go and introduce
extraneous, non-relevant information (other than try to misdirect)?

Where is this "Class E" CB now? :-)

>> Part of 10m could go the same way.
>
>Sounds like you would like for that to happen.

WARNING...ANOTHER FLAME WAR IGNITION POINT!!!!

Poor baby, is that the best you can do for word-twisting?

Do you need a Yiddish-English dictionary to get some nice,
mittle-Yurpean swear words? [I know one user in here who
does...:-)]

You don't want to admit it, but there is NOTHING sacred about
amateur spectrum space allocations...no divinity will protect
them since all the allocations for all radio services are man-made.
Radio amateurs aren't given resources because they think they
are superior in radio or are noble, honest, good, and true saints.

The 10m band is 1700 KHz wide. It is much wider than any
other HF band allocation. Is it used enough to qualify for
continued amateur allocation even on a secondary basis?
You don't "prove" anything by becoming upset at another who
points out that OTHER radio services and OTHER citizens
MIGHT want a piece of that spectrum. You can't stop
anything by making nastygrams to me or anyone else for
pointing out that spectral allocations are negotiated and
handled by administrations. If you can't prove your case to
the administrations, you don't keep the allocation.

Go ahead, bitch and whine about not being "given your rightful
due." In newsgroups. Try to start whatever flame war you
want. That sort of fire doesn't help your case one bit, is sooty,
dirty, with a lot of smoke that will blow away.

Sorry, but G. Clooney is unbelievable in any role except that "Oh
Brother..." movie.

Kind of like Val coming on here saying all the "right" things about Morse/CW
and bashing the NCTA - before he even had a license.

What am I in charge of? My only problem is that I can read, and have read
Part 97. You should try it some time.

So they had been breaking the rules for a dozen years before admitting it?
What was that stupid ARRL press announcement all about last year?

Several years before that, operation on the 15m band didn't
require.a Morse code exam or an amateur license. The next day it
did.

One day being the operator at a television transmitter required
holding a license that had a touhh exam. The next day it didn't.

So what?

Operators handling manual Morse traffic on HF in the Fixed, Mobile,
or Marine services on HF are required to pass Morse tests which are
more rigorous than the former Amateur Radio Service tests.

The post made by Lennie the Liar that created all this uproar was one in
which he asserted that CB, including the UHF allocations, was not in existance
45 years ago. That was significantly in error.

Lennie has left that part out.

It was put upon him to acknowledge his mistake. He has not.

Lennie the Gutless has not disappointed us, that's for sure.

Steve

So to you, the fact that a DX station operating legitimately is on the
air, causes--no assists others to break their regulations? You are
sticking to your story that I should check on the band authorizations
for the stations who call me in a pileup situation? You believe that
having my QSL manager send out a card with the exact frequency used
somehow makes French reg breakers more eager to snag a QSO? What
happened to that little logic you spoke of? I haven't noted you using
it.

> Is it a law that you must reply to people that you know are operating out of
> band?

Brian. Allow this to sink in: The moment they key a radio out of band,
they have broken their regs. I regularly hear desirable DX on
frequencies below 14.150 when tuning 20m. It doesn't matter to me that
I need a contact. I do not call them below 14.150 because my regs say
that I can't.

My station was operated in accordance with the regs set forth by the
government of Tanzania. I used appropriate power levels and stayed
within the frequencies allocated for amateur radio use by the Tanzanian
PTT. You really want to direct your ire toward French scofflaw hams and

the French PTT for their lack of enforcement. I am only responsible for how MY station is operated. I am not responsible for how YOUR station is operated. In order for me to get a "pass" I would have to have broken Tanzanian regs.

Aren't you supposed to be gone?

Ahhh, the greenstamp ploy huh? Brain, I've spent more money out of my
pocket for QSLing over the years than your entire amateur station cost.
As to "racking up contacts" and "QSL cards", I have loads of logs and a
barn loft stuffed with boxes filled with QSLs. Do you think they might
be valueable?

You really live in the dark.

One day hams could use it for ham radio, the next day they couldn't.
One day many modes were allowed, the next day it was AM and RC only
One day VFO was allowed, the next day it was channelized
One day 1000 watts input was allowed, the next day it was 5 watts
There are lots more.

It is YOUR opinion that there is a violation.
Others, including myself do not agree with your
opinion. The FCC (IMHO) appears to agree
(else the FCC would make an issue of it). Or,
if you believe as you do, then the ball is in your court.

> Good grief, what am I saying? Now I'm the one who wants Status Quo!
>
> Actually, I'm just asking that we follow the rules as they exist. If YOU
> don't want to follow the rules, YOU should ask that Part 97 be changed.

I am totally confident that the FCC has already "blessed"
the Farnsworth spacing and, hence, there is NO issue
now...except if YOU want it so.

Do you complain that the police routinely ignore
speeders on major highways who are going
"with the flow"...even if the flow is 75/80 in a 65?

Cheers,
Bill K2UNK

Perhaps someone has more knowlege than I do on this and can offer a better time frame. I believe the FCC started shutting down facilities a long time before six years ago. We had a monitoring facility near Rochester, NY - it was located in Canadagua, which is only 25 miles or so from here. The FCC used to be a powerful government agency which DID enforce the regulations. I don't know what the extent its' monitoring facilities are, but there are FAR fewer FCC field agents than existed in the 60s. Anyone have info on this?

73 from Rochester, NY

>and bashing the NCTA - before he even had a license.

Well, I'm told that Extras (pre-restructuring licensees) got some sort of "divine revelation" when their licenses arrived in the mail. That may or may not be true, but the story elaborates on them becoming "brothers in tradition (or something)" during the revelation and thus knowing EXACTLY how it was like back before they were born.

Val's case is just a typical computer-modem newbie who can't take the tag-team atmosphere of a newsgroup. They get all bent out of shape on criticsm of the slightest sort, magnifying it to way-exaggerated heights. He can't be a bad sort...he was the salvation of an entire Army Brigade with his little PRC-25! :-)

Phil, I'm not sure. Granted, to get the 1st telegraph one had to had a sea endorsement - but the 2nd was 20 words per minute - the same as the extra. When I went to the FCC in Buffalo, NY, in 1966, I wanted to take both the 2nd telegraph (I was both too young and didn't have sea time to be able to try the 25 wpm code test) and the amateur extra, the examiner set up the code exam and gave me credit for both the extra and the telegraph. I mentioned to him that I noticed the machine was set to 22 words per minute - to which he replied 'you didn't want to wait all day, did you?'. In any case, it was 100% copy for the entire exam. Then the theory. Fun. And I had to be back at WROC-TV for the evening shift! The tests were not particularly difficult, but they were very honest. You passed or failed. No one could help you, you were under the steely eyed FCC examiner. However, I was proud of those tickets (2nd telegraph, 1st phone, radar endorsement, and amateur extra). They meant more to me then than my current extra class ticket issued in 1993 (after over a 10 year lapse). I can understand where some of the guys are comming from, but honestly don't see where cw proficiency really means a whole hill of beans today.

I assume you are in high sarcasm mode, Brian. 8^)

History is a lot of fun to a lot of people, myself included. I have spent
a lot of time perusing the history of all my hobbies and vocations.
There is a lot of use for what came before, and it is surprising how
little is actually new under the sun.

And although it won't ever happen, I would personally enjoy ARS history
questions on the tests!

FCC called it CB from the start in 1948. GMRS and FRS are just new names, created when the rules were changed.

Five decades. And FCC has made some really dumb mistakes. Ask Newt Gingrich.

Len, it's quite clear that you hate the amateur radio service and want it to
die out. It's also clear that you are not interested in any sort of civil
discussion. Nor are you man enough to admit when you've made a mistake.

Val Germann is right.

>Jim, I thought you said that CB came in in 1958 - the year I was born.

Not me. You are mistaken, just like "Lenover21".

Class C and Class D (27 MHz) CB started in 1958. Class A and Class B CB on UHF, started in 1948. FCC called it CB, even back then.

Note that "Lenover21" writes:

"45 years ago there was no CB...not even on UHF."

This is simply incorrect, because CB has existed in the USA for the past 54 years.

--

>I'm 43 years old. Wouldn't that make Len correct?

Nope. See above. Len is just plain wrong, but he won't admit it.

--

Did you ever check out those end-fed antenna links? One was a reprint of a 1991 QST article, and the other was by a Dutch ham.

It may not have been clear but the Citizen's Band Radio Service
pre-existed 11m CB by years. CB radio did not originate on 11m.

Maybe YOU do, but I want the sons of bitches OFF 10/12 meters. Period.
Whatever it takes to get those #%^@*#&^ ba*****ds off the bands I worked for
the privilege of using, I say, let's DO it.
>
> If you want to do something productive, help track down a few of these
> freebanders that are operating on 10m, and turn 'em in to the FCC.

I am doing JUST THAT! See other posts of mine suggesting that hams become
agressively involved in the 10 meter issue. Just this weekend, I discreetly
visited
5 Travel Plazas. I found one selling "Magnum Delta Force '10 meter radios'.
That
info is being forwarded to FCC this date! I pinpointed, recorded, and noted
pertinent
data on the truck who hailed me on 28.085 with "How 'bout the Z34 Northbound
and
down"---if I have my way that son of a bitch is BUSTED!!
>

No they are NOT "staying in their pen", and I see the removal of the DX
ability
as one way to make the operation on illegal frequencies less attractive--and
I have
already suggested that very thing to various Congressional reps and
committeemen.

The VECs standardized on Farnsworth timing.

Why do you think that ARRL's telling hams about that was stupid? They did so
in an unbiased way.

That's what was said in the late 1980s about amateur VHF/UHF. Supposedly,
having a nocodetest VHF/UHF ham license would bring in so many new hams that
our VHF/UHF bands would be full of activity, bandedge to bandedge, and this
would help protect bands like 220-225. Didn't happen.
>
>It pisses me off that freebanders can get on there and yak it up
>with no worries BUT if I get on there I'll loose my license for
>it! Damn the FCC and their double standards.

The FCC IS going after freebanders and other violators.

It is almost certain that the code test will simply be removed late next year.
First step will be the deletion of S25.5 at WRC 2003 (that's the treaty
provision requiring a code test). Second step is the USA ratifying the changes
agreed to at the WRC. Third step is FCC dropping the test completely.

Some folks think FCC will have an NPRM, but my guess is that they will simply
drop the code test ASAP.

So you have two options: Learn enough to pass the code test now, or wait for it to go away in 18 months or so.

Where does that number come from? CB licenses are long gone, and there is no
form of registration or other formal way to know how many cb users exist today.

Twenty years ago, cb antennas on homes and vehicles were a common sight in this
area. Today they are more rare than ham antennas.

In the late 60's it was learned that FCC direction finding facilities
had caused a rare interaction with the soil under the DF antennas.
Interterpolation of HF radio signals over the years with certain
bacteria's in the soil and other chemicals caused formation of rare
and little know lithium-diaganose crystals, which are highly prized on

the international market. As a public cover story, the FCC began closing down various DF sites around the country, while opening subterranean mining facilities which collected and purified the rare lithium-diaganose crystals. FCC employees who would not consent to mining the rare crystals were purged, while those who consented to being sent down in the mines were given huge promotions and bonuses for the crystals they mined. I know this sounds crazy, but I was given a rare tour of some of the subterranean mining facilities and let me tell you, these guys are making some hay! So, today, the story persists that the FCC has converted to a remote monitoring network, but we know that's not true at all, since the FCC is the sole source of lithium-diaganose crystals. Believe me, some people in the FCC are getting wealthy beyond your wildest dreams!

You said CB radio and ham radio are completely different.
Presumably, that includes the frequencies they use and the
physics under which their transceivers and antennas operate.
Doesn't "completely different" mean they have absolutely
nothing in common?

> 73,
> Ed Hare, W1RFI

Here's the bottom line Ed. The anger comes from
Extra class operators who don't know how to solder
or how to check swr with their own equipment.
But are able to get on hf JUST BECAUSE they can
pass a code test and a couple of written tests.

I know one Extra who is a science teacher
in the local school who asks me questions that a
beginner in CB would know the answer to.

I also have a friend who is a General who is also
a former CBer who just happened to pass his tests
but can't figure out the most simple of problems
with his equipment. When I try to help him he
thinks I don't know what I'm talking about. Then
later (days to weeks) he tells me he found out
what was wrong and it's just what I had told him
in the first place.

It's also from the HOLIER-THAN-THOU PCTAs killing
people's interest in our hobby with their anal
retentive chant of NO CODE = NO HAM along with the
other ELITIST crap that they espouse!

I understand electronics and radio theory pretty
well BUT because I have not taken a code test
I'm not allowed on HF at all, but at this time
the freebanders are everywhere (including 10m)
and VERY FEW if any ever get in trouble for it.
That's the FCC's double standard I'm upset about!
IF I HAD HAIR I'D PULL IT OUT BY THE ROOTS!!!

BTW I do know that Willam Flippo got in trouble
for his jamming, but he was being a REAL pain in

the ass to a LOT of people, they HAD to do
something with him. Not like the 10m freebanding
cockroaches we started talking about here. They
aren't showing up on the FCC's radar like
Flippo did.

One Angry BALD-HEADED Man
President and only member
No Code Liberation Army (NCLA)

Answer to everyone's first question.
YES I AM LICENSED!

Answer to everyone's second question.
NO I DON'T WANT TO PUBLISH MY CALLSIGN HERE!!

Answer to everyone's third question.
YES I AM PROUD OF IT, I'M JUST NOT STUPID
ENOUGH TO USE IT ON THE INTERNET, DUH!!!

Then Ed said,

"I am glad that we agree that there is no need for the FCC to change from
Farnsworth testing."

Ed, why did you have a great idea above, then say there's no need? Is this
some kind of Newington-speak?

I do think history has a place on the exam. But the sarcasm was making it
worth more than all the rest of amateur radio combined, like one particular
mode is.

Assists. If you knowingly work them out of band.

You are
> sticking to your story that I should check on the band authorizations
> for the stations who call me in a pileup situation?

I am sticking to my story that IF YOU KNOW that the station calling you is
out of band that you shouldn't answer them.

You believe that
> having my QSL manager send out a card with the exact frequency used
> somehow makes French reg breakers more eager to snag a QSO?

Yes.

What

Dave, do you honestly believe that a person that breaks a law to work you
out of band won't lie and say you made a mistake on the frequency stated on
your QSL card?

Good grief.

There! You said it again! I knew I wasn't mistaken. The service commonly thought of a CB is at 27 MHz.

Class A and Class B CB on UHF,
> started in 1948. FCC called it CB, even back then.
>

You obviously have no ability to read AND comprehend.

It is of no importance for hobbyists to learn it if even professionals
don't.

The no-coders DID populate VHF and UHF. Then the wars started and no one
populates even VHF anymore.

220 "was a done deal" according to you PCTA. Equipment was scarce and
expensive.

If he was going to use Morse code he would have already learned it. If I wasn't going to use it I'd wait.

Excellent code learning freeware that runs on Windows 9x, NT and
others available at:

http://www.g4fon.co.uk/

Easy to download, install and use (download fits on a floppy).
Does "Farnsworth" and "classic" timing, speeds from 5 to 50 wpm,
teaches via Koch method. Optional QSB, chirp and background noise.

Standard disclaimers apply.

> pass a code test and a couple of written tests.

I obtained ALL amateur frequency and power privileges in
1953 without knowing how to solder or how to check SWR.
There were no Q&A on soldering. Heck, I didn't even know
what SWR was because the only test question on SWR was
so easy to rote memorize.
****
Q: What is the formula for determining the standing-wave
ratio in a transmission line?

A: The formula for determining the standing-wave radio
in a line is: SWR = Imax/Imin or Emax/Emin
****
No need to know that 'I' is current and 'E' is voltage.
No need to know what Imax, Imin, Emax, or Emin means. Just
be sure the three letter "max" part is on top and the three
letter "min" part is on bottom. Since "max" is virtually always
higher than "min", it was a no brainer to rote memorize. Any
ratio that involves either 'I' or 'E' with 'max' on top and
'min' on bottom was the correct answer. Absolutely no knowledge
needed. All that was needed was an IQ above 57.325. If you had
trouble recalling, just remember that Mighty (Maxi) Mouse is on
top of Minnie Mouse (at least that's the way it was in 1953 :-).

If the system is broken, it has been broken for the 51
years that I have been licensed.

Does getting angry change anything in reality? Yep, it decreases
your life span. Everyone is ignorant of something, even you. Why
not try for a kinder, gentler approach to your fellow hams?

Well, perhaps we should put the satellites, along with everything else, on 10 meters? Different bands are used for different purposes. For short range communications, cb would have served well except that no one respects the rules. Now, unless you run a lot of power, you may well be limited to 5 miles or less. If people want to use radio for experimentation or as a hobby, the license is required (and isn't that tough). Simple reasoning: the world doesn't want millions of hobbiests using lower hf for broadcasting, roger beeps, swearing, etc. The amateurs are not particularly enthusiastic about turning one or more amateur bands into such a sewer as you find on 11 meters either (yeah, there are a few bad amateurs; licensing helps eliminate the bad ones and tends to keep a number from straying too far as well). I have to chuckle about the 'large number of unused frequencies'. There are many repeaters active on 2 and 440, with a lesser number on 10, 6, 220, 900, and 1.2 GHz. Check this for what is available in my area: http://www.geocities.com/d_fravel/rlist.html
You have claimed they are largely unused; not true. Granted, at any given time most will be unused, but if you are traveling mobile and wish to maintain a qso with another station, you will often change repeaters as you move further away. Locally, the WB2KAO repeater has a nice range; I've talked to a mobile in Buffalo over it, but you will find the coverage spotty. The mobile will drop out at times; it is easier to switch to a repeater located between Rochester and Buffalo (or, with a good base, you might simply fire up a Buffalo repeater) and enjoy solid communications. I've heard Tim, WB2KAO, many times on a trip to see his dad. He'll start on his machine in Rochester, then, once 20 or 30 miles out, switch to the Bristol Mountain machine while talking with someone. Pass on a chunk of 220 or 440 to hobbiests with nothing to lose, and there will be problems. I suspect that MURS will head that way once folks discover what can be done with a couple of hundred watts. Then MURS as well as the buisness band adjacent to it will be rendered useless. This will take a bit of time, but with high power you can cover well over 100 miles 24/7 - and with propogation enhancements, California stations WILL be heard in Hawaii on MURS. This won't happen for a time, but it will likely happen. Care to bet coffee for a week?

Phil, you make a good point. Years ago, I kept complaining to the City of Rochester about a property behind me. Not only were weeds growing, but there were a couple of junk cars and old tires. I kept after the city for a year - THEN I took some pictures and went to my attourney. In less than a week, city crews were there, along with a tow truck, garbage truck, and equipment to clean it up. I'd have loved to see that idiot's tax bill the next year!!! ;)

The larger question is how does one prove CW expertise on an ASCII
netnews group? Can everyone be trusted to truthfully add/delete
individual hams to/from such a list?

>endorsement -

It was one year of aggregate service either at sea or at a
coast station handling public correspondence by manual Morse.
Certain Navy stations qualified for that purpose. The "sea
tine" requirement was 180 days "signed on the articles" for the
Six Months Service endorsement necessary to be the solo
operator on a cargo vessel. One got that as a second op on
either a US flag passenger or cargo vessel.

>but the 2nd was 20 words per minute - the same as the extra.

20 WPM plain text, 16 WPM code groups, with receiving and sending
tests for both. I always considered that combo as tougher than a
plain 20 wpm receiving test with maybe a sending test, and we were
less lenient on the grading (one had to be a handwriting detective
sometimes).

>When I went to the FCC in Buffalo, NY, in 1966, I wanted to take both the
>2nd telegraph (I was both too young and didn't have sea time to be able to

>this?

"During my time" the FCC had three types of monitoring/DF
facilities.

In the mid 1970s the "primary" at Santa Ana CA was closed and
moved to Ferndale WA, the "secondaries" at Juneau AK, Spokane WA,
Chillicothe OH, Beaumont TX and Canandaigua NY were closed,
and the FCC contingents at four "shared" sites run by another
Federal spook agency were relocated to existing FCC stations.

The property at Canandaigua was retained throigh the years
and served as a test bed for development of the remote control
system in the mid-90s. It is still "on line" remote/unmanned.

>
> Couldn't hack the commercial world, I guess.....

Heh heh heh heh.

I had a fine career in the "commercial world" of radio electronics and retired with a nice income still rolling in. Anyone can do that if they plan ahead.

Ham Radio Magazine, an independent technical-interest amateur radio oriented monthly lasted 22 years, spun off Ham Radio Horizons, a second amateur radio oriented monthly, had a fine independent bookstore section. Everything was sold off to CQ which created Communications Quarterly, a quarterly publication out of the general theme of HR's original format. CQ still has the Bookstore running, the one started by HR.

Seems like there a great deal of "different" definitions of "defunt" [sic]. :-)

Seems like there is a LOT of dissing by the technologically ignorant who were around when Skip Tenney and Jim Fisk started up HR and kept it going as an independent for years. Jim Fisk was the Editor in Chief and set the format...and kept it superior. Unfortunately, Jim suffered a fatal heart attack just as HR's subscription base was peaking. Alf Wilson and Rich Rosen kept it going to Fisk's high standards but independents had to rely on advertising revenue to stay in business...unlike QST's base as a membership magazine.

It is VERY petty of some who want to label a 22-year span of an independent periodical as "defunct" when they were competitive and successful. That only goes to show how low some people get in trying to achieve message points in here. Petty. Low-class.

Such conduct is a discredit to the amateur radio service.

Too late...Ed went over to the dark side of the force.

It's sort of a redux of George Orwell's novel "1984." Given the technology gap of amateur radio versus the rest of the radio world, amateur radio technology is something like three decades behind. In 2004 the ham operators will have caught up with 1984 state of the art. Maybe.

Meanwhile, as in "1984" (the novel), Big Brother is THERE and will guide/direct US hams to the Proper Path.

No problem. :-)

This is AMATEUR RADIO, Brian...hams have no use for pros.
[several very important amateur extras have stated so...]

If ham radio had morse code test requirements when Dickie was
learning all about TV production in the US Army, then they
MUST CONTINUE TO HAVE MORSE CODE TESTING!

That's all there's to it...it's the amateur way. :-)

>pre-existed 11m CB by years. CB radio did not originate on 11m.

Cecil, this isn't about CB radio's history or the "accuracy" of a radio service or even about the "definitions" of a radio service. It is all about the spite of some anal-retentive types who MUST be "right" because they have established claims that THEIR word is always "right." Jimmie Micollis appears to be one of those.

It's sort of like the flame war that erupts when someone says something bad about morse code using the common term "CW." An anal-retentive type has to jump in with the sarcastic comment about it "really meaning 'continuous wave'" and they insist on making a federal case out of it. Never mind that "CW" has become a de facto term for on-off keyed continuous wave, the "correction" on "CW" has to be issued to put the original poster "in their place." :-)

The same is true for "CB." Today there is only ONE "CB" left, the original Class D part of the four-class Citizens Band Radio Service. It is codified in Part 95, Title 47 CFR. The original Class C part of Citizens Band has become a separate radio service in nomenclature and is also codified in Part 95. Radio Control Radio Service has gotten extra frequencies through citizens' requests, showing that the FCC really does listen to ALL the US citizenry.

The old Class A and Class B UHF Citizens Band allocations and regulations have long since disappeared and what few equipment there was at UHF CB have become scrap or a rare relic gathering dust. Perhaps the most-available was an expensive tube type super-regen and modulated oscillator that was a technologic throwback to pre-WW2 designs. Technically it was a piece of electronic junk, didn't last on the market.

The anal-retentive, absolute definition types will trot out damning "error-mistake!" messages because it is Their Way and they Must Prove Something. Never mind that "CB" will always be identified with the old 11 meter band allocations in the vast majority of everyone's minds, even those who aren't really into radio. Hams HAVE to damn "CB" because it is tradition and has long been a part of amateur radio prideful bigotry. :-)

It is nonsensical that some otherwise-thinking mid-forties hams
have to create vast reams of "corrective" messages arguing "errors"
(even "lies" in the message-point distortion) over 43 years versus
44 years...as if they had something to do with it when they were
infants or little children. :-)

:-)

>Len, it's quite clear that you hate the amateur radio service and want it to
>die out.

Not at all. I think it is a fine hobby involving radio.

I also think that some involved with amateur radio have gone over the edge and proclaimed themselves as THE spokespersons and representatives of the hobby, becoming far too involved with the mystique and myths and legends that were created long ago.

>It's also clear that you are not interested in any sort of civil discussion.

Oh? This is a "discussion" venue? :-)

I thought it was a forum where the PCTAs could say anydamnthing they wanted against NCTAs but the vice was not versa. I thought it was a forum where anyone not boosting morse code was considered lower than slime, ignorant, and immature.

Look at the taglines of another amateur extra who, for months, signed off with a single Yiddish pejorative against those she didn't like...very "civil" was it?

Look at yourself, then, arguing minutae as if it was a life-and-death situation, overlooking the gist of a message and concentrating on what you consider "errors"...amplification beyond reasonableness when the subject doesn't involve amateur radio!

> Nor are you man enough to admit when you've made a mistake.

I made the mistake of thinking you were a rational human.

Mea Culpa! :-)

Here's wishing everyone a happy and safe Independence Day
for all of us American citizens.

Let's celebrate 226 years of our nation's existance by
remembering how it all began and how we've kept it
free regardless of threats against our way of life.

Happy birthday to the United States of America!

Excuse me? Who knowingly worked anyone out of band? Aside from that
small technicality, just how does my operating on a frequency where I am
permitted assist anyone in keying his transmitter?

> You are
> > sticking to your story that I should check on the band authorizations

Which stations did I KNOW were "out of band"? In an earlier incarnation
of this yarn of yours, you told me that you'd look up the station's
authorized band segment. I remember somethin' about you having them
under glass...

> You believe that
> > having my QSL manager send out a card with the exact frequency used

No. Dig deep, Brian. Assume I'm using SSB. Stick with me on this one.
We'll get through it. The moment I transmit an SSB signal on say
14.132, I have broken U.S. regs. How would a DX station operating on
that frequency "assist" me to break my country's regs?

...and all of those guys are going to say that I made an error on all of
those cards? If someone from Newington asks me to check my logs and
confirm the frequency, did you think I wouldn't? Some sap from Germany
sent me QSLs for QSOs which took place within five minutes of each
other. The guy had calls in Germany, Luxembourg and the U.S. I found
it interesting that he managed to transport himself from Germany to
Luxembourg and then to the U.S. within five minutes. I sent the cards
to the DXCC desk with an explanation.

You are a real cartoon character, Len. You jump on Steve's medical credentials and don't expect flak in return. Then you launch into a history of "Ham Radio" magazine for us as if you are an expert on the subject. I subscribed to the last couple of years of the run and wrote two articles for Ham Radio Horizons. Nobody said anything negative about the 22 year mostly successful run of "Ham Radio". What was said was that it is defunct. That was stated because it is defunct. It has ceased to exist. "Liberty" magazine was a successful magazine during most of its run. It too is defunct. "73" magazine isn't very successful. It is not defunct.

Hmm, let's see. We'll take someone who has shown enough interest in Ham Radio to go to the effort of getting licensed. Now, instead of Elmering them, encouraging them to upgrade, show them the ropes, no instead we'll totally ignore them, causing them to get discouraged and leave the hobby.

Oh yeah, that's a great way to preserve the hobby. Preserve it right out of existence.

As I recall he did a bit more than just diss the FCC, he interfered with Police and Fire freqencies, blocking emergency communications traffic and putting lives in danger. He also attacked some hams, something about a car ramming incident if I recall right.

I'm not saying the FCC is perfect, far from it, just that what he did deserves more than just the label "dissing".

> 73 de K2ASP - Phil Kane
> Licensed 50 years TODAY

A hearty congrats! I'm jealous. I could kick myself for not getting into the hobby as a teenager when I had the chance. They already have the QCWA, maybe they ought to have a Golden Ham award for folks in the hobby at 50+ years. Would be interesting to find out who the longest licensed ham. I wonder if you could find that out from the FCC database? Hmmm....

You did. The Frenchman came on here and recited their 6M privs. You stated the freqs where you were contacting them and it was outside their limits. I pointed it out, but you insisted that you were doing nothing wrong and continued to work them anyway. Or so you said.

> > > Brian. Allow this to sink in: The moment they key a radio out of

Why break the rules again, Dave?

What's wrong with contacting desirable dx with CW? There's no reg forbidding cross-mode QSO's.

Remember, you said all the 3rd worlders were using it.

>see any reference to "CB Class A or CB Class B" in there.

I refer you to the Commission's Third Report and Order in the
proceeding entitled "Revision of Operating Rules for Class D
Stations in the Citizens Radio Service", FCC 76-1138, Adopted
December 14, 1976, Released December 16, 1976. Citation is 39 RR 2d
5500, 63 FCC 2d 32, 1975 FCC LEXIS 2142.

In Paragraph 4 of that Order the Commission stated:

4. We believe that the time is now right for the implementation
of the name changes, and we are therefore changing the names of
the Citizens Radio Service and its subdesignations, as follows:
the Citizens Radio Service is redesignated the Personal Radio
Services; the Class A Service is redesignated the General Mobile
Radio Service; the Class C Service is redesignated the Radio
Control (R/C) Service; and the Class D Service is redesignated
the Citizens Band (CB) Radio Service.

It is interesting to note that from 1949 until the early 1960s
there WAS another "General Mobile Service" which was a land mobile
dispatch service (as distinguished from an interconnect service) run
by both wireline and non-wireline common carriers who leased the
equipment to the users. When this service was abolished, there was
a stipulation put into the land mobile rules that the carriers could
no longer lease the equipment to the licensees. This stipulation
was removed in the early 70s when the carriers no longer were interested
in providing such a service.

>Are you going to make a Big Federal Case out of this? :-)

Nah, just a summary procedure....(see the summary above) <ggg>

If he had showed real or fake repentance the first time he was
caught, he could have gotten away with a warning and maybe a couple
of hundred dollars in penalties as others have.

But no, he "dissed" the FCC and kept on doing "bad things".....

Ed, I don't have the slightest bit of confuision on my end.

You said, "Hey, I have an idea. If faster speed is more fun, maybe the VEs should let people learn the characters at faster speed, but send those faster characters at a 5 wpm overall rate."

I said, "Ed, great idea. Why not suggest the FCC incorporate it in to Part 97?"

Then you said, "Doesn't seem to be a need to, Brian."

Then I said, "Ed, do you spend all of your idle time thinking up things that there's no need for?"

Then you said, "I am glad that we agree that there is no need for the FCC to change from Farnsworth testing."

Which of course, ISN'T what I said. You are simply confused, or just plain simple.

Now we're back in position for you to comment again. Please, no snipping or you're likely to get even more confused.

I don't know how they do it in Texas. We make sure there aren't any
gaps or holes in the siding and keep the doors closed. I've never seen
a rat in these parts. Do field mice or chipmunks count?

> You want someone to endorse you for a Pulitzer? :-)

Why, did you get one for your "Ham Radio" articles?

> Couldn't handle the technical stuff in HR, ey?

I wrote an antenna article and a humor piece for those Novices for which
Brian said I didn't search the bands.

> >Nobody said anything negative
> >about the 22 year mostly successful run of "Ham Radio".
>
> Not "mostly successful," Superman, SUCCESSFUL when
> up against CQ, 73, and that membership magazine.

In its latter years, "Ham Radio" was not successful. The other
magazines you mention are still in existence.

> >What was said was that it is defunct. That was stated because it is defunct.
>
> Nah...the gist of it was to slam HR and the people that made it

I've never slammed either the magazine or the people who made it
possible. You are raving.

> >It has ceased to exist.
>
> Not really...it metamorphosed into Communications Quarterly
> and the Ham Radio Bookstore became a retail outlet of CQ.

No, Len. It has really ceased to exist. There is no more "Ham Radio"
magazine.

I did? Did I have an exchange with this visiting Frenchman. First I
ever knew of it was when you reposted his material some time later.
Do you think I bother to read all posts made here?

> > > > Brian. Allow this to sink in: The moment they key a radio out of

Let's try it again, this time v e r y s l o w l y s o t h a t
e v e n y o u c a n u n d e r s t a n d i t :

I broke no rules of the country where I was licensed. You really want
to take this up with the French PTT and REF.

> What's wrong with contacting desirable dx with CW? There's no reg
> forbidding cross-mode QSO's.

Do you know the difference between Phone DXCC and CW DXCC?

> Remember, you said all the 3rd worlders were using it.

I said "all" third world hams use only CW? Proof please.
When I want to work HF CW stations, I do it in the cw/digital portions
of the bands.

Prosecuting? I don't even believe the French PTT is going to prosecute
any of them. So far, you're the only guy who has ever shown the mildest
interest in the matter. Let me ask you again--have you contacted the
French PTT or the REF to protest the outrageous behavior of some French
6m ops?

> Some sap from Germany
> > sent me QSLs for QSOs which took place within five minutes of each

You've uncovered the pile of green stamps?

You've uncovered copies of my logs showing that I was operating out of
band?
```

You've actually taken action through the French PTT?

You have proof that I had copies of the French regs and chose to ignore them?

Get a life.

>The same is true for "CB." Today there is only ONE "CB" left, the
>original Class D part of the four-class Citizens Band Radio Service.

Wrong-amundo, Lennieboy.....

Part 95 states, to wit:

95.401 : CB Rule 1

The Citizens Band Radio Services are: (please note the plural)

(a) The Citizens Band (CB) Radio Service (SNIP)

(b) The Family Radio Service (FRS) (SNIP)

(c) The Low Power Radio Service (LPRS) (SNIP)

(d) The Medical Implant Communications Service (MICS) (SNIP)

(e) The Wireless Medical Telemetry Service (WMTS) (SNIP)

While there is still one subpart that is specifically called "CB", ALL of
the subparts of Part 95 are, by FCC regulation, "Citizen's Band".

Please get your definitions right, Lennie. There are persons here who are
not as versed in radiocommunications, and your erroneous references could lead
to confusion. You profess to be a "communications professional", yet you
continue to post erroneous information.

Why is that?

>The original Class C part of
>Citizens Band has become a separate radio service in nomenclature
>and is also codified in Part 95.

More confusion. "Class C" CB is radio control. It is NOT a "seperate
radio service. It is a SUBPART of an established radio service, specifically
the Citizen's Band Radio Services.

If were a complete seperate service, it would not be under Part 95.

>The old Class A and Class B UHF Citizens Band allocations and
>regulations have long since disappeared and what few equipment
>there was at UHF CB have become scrap or a rare relic gathering

>dust.

It has not completely "disappeared", Your Erroneousness...It exisits today
as the General Mobile Radio Service which is a subpart of Part 95 of the
Commission's rules and regulations. 47CFR95.1 refers...

>Hams HAVE to damn "CB" because it is tradition and has
>long been a part of amateur radio prideful bigotry.

Nope...that's YOUR insistance. And you are NOT a Ham...(Thank GOD!)

>
>It is nonsensical that some otherwise-thinking mid-forties hams
>have to create vast reams of "corrective" messages arguing "errors"
>(even "lies" in the message-point distortion) over 43 years versus
>44 years...as if they had something to do with it when they were
>infants or little children.

It's even MORE "nonsensical" that a retired electronics technician with no
valid license of ANY kind would waste his waning days in a newsgroup for which
he has no vested interest, trying to tell those who ARE licensed how they
should be conducting themselves.

Sucks to be you, Lennie.

>It is VERY petty of some who want to label a 22-year span of an
>independent periodical as "defunct" when they were competitive
>and successful. That only goes to show how low some people
>get in trying to achieve message points in here. Petty. Low-class.

There's nothing "petty" nor "low class" about it, Your Geezerness...The magazine is no longer in regular publication.

There are no "Ham Radio" offices.

There are no "Ham Radio" subscribers.

The U. S. Postal Service has no current record of any periodical being circulated via the mails known as "Ham Radio".

There is no "Ham Radio" staff, editorial, business or otherwise.

Ergo, it is DEFUNCT.

That another publisher bought up therights to the now-DEFUNCT magazine and utilize some of it's old material in irrelevant.

>Such conduct is a discredit to the amateur radio service.

I've read Part 97 forwards and backwards and cannot find a single paragraph that says it is, Lennie....Ergo we are again dealing with something that should have siad "...in my opinion".

No other basis in fact to state otherwise exists.

WRONG! We're discussing people, already active on CB who want
SSB, more bands and Higher Power. We're also talking people
who have _SO LITTLE_ interest in what makes Ham Radio tick
that they cannot tell one end of a resistor from the other.

> Now, instead of Elmering
> them, encouraging them to upgrade, show them the ropes, no instead we'll
> totally ignore them, causing them to get discouraged and leave the hobby.

Their hobby is CB, for it consists of operating only, with no technical
acumen. There's no way I'm going to help them there.

"Life and death situation"? Nonsense! I simply point out errors. For example, you claimed that I have referred to myself as a "renowned historian", which is simply not true.

>overlooking the gist of a message and concentrating on what
>you consider "errors"..

They ARE errors. Your resist to admitting them to an extreme degree, and abuse those who dare to point them out.

The gist of your messages is quite clear: You hate amateur radio, the morse code, and want the whole ARS to simply die out and go away - or turn into a high power multiband version of cb.

>amplification beyond reasonableness when the
>subject doesn't involve amateur radio!

Sounds like most of your posts.

> respect

The RAE is a trivial low level exam to be compared to an 'O' level.
Why should anyone's self respect be improved by doing what I did
years ago, without any significant effort? I remember having to
read the BR68 but the rest was very simplistic. The RAE is a very
fundamental beginning to the process of self training in
communications. From that point any 'real radio ham' will
spend considerable time and effort in real discovery and learning
in any of the many areas of knowledge and skill which are relevant
to radio communication.

> Then you might also gain some from others ?

I certainly have no desire to respected by an ignorant snob
like yourself. Your inability to admit that the vast majority
of the M3 licences have been issued to amateurs with the same
qualifications as you is pathological.

Anyone who believes that operating is not a skill is obviously not a 'real radio ham', and probably a very poor operator to boot. The majority of M3 licence holders have passed the U.K. RAE, so they can tell one end of a diode from the other. Resistors don't care which end is which, BTW. Are you sure you understand electronics at all? Certainly not up to even the RAE, if you think resistors have two different ends!

>Koch method? What is that? Is the ARRL using it to test?

The ARRL VEC, along with all the other VECs, uses Farnsworth timing to test applicants for Morse code proficiency. They will administer a standard timing test for an applicant on request.

If you didn't know this, it explains your confusion. If you did know this and asked that question anyway...

You clearly don't understand electronics; it matters
very much which way round you read the colour code.

So if it bothers you so much, get them interested. Show them the benefits of learning the techincal end.

Besides, there are some people who get into the hobby strictly for the ragchewing. They could care less about building their own eqiupment, that's not what interests them. They are in the hobby strictly to meet new people and chat with them on the air.

And guess what? That's OK. The hobby is quite big enough to hold EVERYONE, from the I-just-want-to-talk to I-built-this-rig-myself to I-don't-own-a-mic-cw-is-great people.

So? Who says they have to? You?? What makes your definition of a Ham the correct one?

>There's no way I'm going to help them there.

Sure, keep up that attitude. But don't be surprised when the number of hams dwindles so far down commercial interests snag our bandwidth.

I've got a EE degree, have been a ham for 51 years, and I didn't
know that a resistor is polarized. Which end goes to plus? Is
there a resistor anode and cathode or what?

From: KC8PMX <kc8pmx@NOSPAMdiamondcs.net>
Message-ID: <afvllh01jc0@enews1.newsguy.com>
Source record: 48239

Maybe I should of clarified that a little.... I was referring to defending amateur radio as a whole, not necessarily just one part of it. There are many congresspersons and senators that I have met in Michigan that have no clue about our hobby. Gee... isn't that a shame!

Granted there are some occurences like Hurricanes that we have "some"
advanced knowledge, but there are a ton of other emergencies that we may not
have any more than 1-6 hours lead time or less to get deployed.

>

As far as the question pools, I have absolutely no problem with the
questions themselves being published. NOT THE FOUR MULTIPLE GUESS ANSWERS.
I took all the questions from the tech and general pools and answered them
in a fill in the blank fashion. Later on, I did make flashcards to help
memorize that evil information from the textbooks, such as frequency/band
allocations and other static info like that. I do not really need to know
why the FCC gives us the certain specific frequencies, I just need to be
aware of them and also proper operation within the limitations. Either way,
the questions themselves are not necessarily a bad thing to have released,
but the answers may be.

Talk to him at least 4-5 times a week. I know never to try to bother him about 9:55PM EST, because he seems to be really faithfull in participating in that net. He has been doing some wonderfull traffic handling classes for our ARES group, as well as other presentations for our club. As stated earlier, I wish more hams were like him. He is definitely a proactive, positive/up-beat ham and a leader also. So far the "grumpier old man" syndrome has not hit him yet. The hobby has clearly benefited from his presence and the hobby would advance more if more were like him.

Stepping down from my pedestal....

Nah.... actually to make morse code an effective and clearly understood method of communication, use of it in the 30-40 wpm range without abbreviations should be where we are testing for now. That is the closest from my estimations as to the speed at what we speak at in a normal conversation, on average. So lets raise that bar back up, and even above the old 20wpm to somewhere between 30-40 wpm. Then morse will be useful.

The same 3-5 minute short voice qso I may have with a local ham would seem to take 15-30 minutes trying to send that via morse at the current/past ranges of 5-20wpm.

Ryan

Ahh, now you're exhibiting the same problem you have with the French
operating outside their band authorization.

Address your questions on French operators to the French PTT or the REF.

Address your questions on why Len thinks what he does to Len.

Dave K8MN

Ok, Jerry...here we go. My response will not be politically correct, but it will be painfully honest.

>> I agree with your post with the exception of this little gem. Many folks
>(like
>> six or seven MILLION!) happen to like the 27 MHz CB.
>
>
>And the question is WHY do they like 27 MHZ?

Because over the past forty-four years, the 27 MHz CB has become a pseudo-hobby band. (Despite the FCC's original intentions.) Some like the skywave propagation and others (Like myself) prefer to rag-chew.

>Those that would like to have
>a local, quiet 2 way radio service would not mind that it happened to be on
>VHF
>and that they now have much less noise and interference.

Good, then by all means...enjoy FRS and MURS.

>Let's not beat
>around the
>bush: the ones that like 27 MHZ and would scream like stuck pigs are the
>ones who
>are already breaking the laws governing the CB "Service". OF COURSE, they
>wouldn't like having 27 MHZ taken away because their precious DX, their SSB
>"clubs", and their assinine "Worldwide-worldwide" foolishness would be
>eliminated.

Well, at least you didn't go the ignorant DX=amps="freeband" route. For this, I'm appreciative. Ok, Let's NOT beat around the bush; You already know my position re. the 155.3 mi. rule so you can surmise that I don't get my knickers bunched up over anybody working DX with 12 watts P.E.P. on the legal forty. If you or anybody else wants to equate that with "criminal activity" or "lawlessness," be my guest. I don't buy into that bunk one bit. Although I don't currently work any 11-meter DX, (I prefer 10.) I would like to see CBer's organize themselves and lobby for the removal of the 155.3 mi. limit on the CB. That's doing it the right way. Just because something's "on the books" doesn't make it right. (Remember prohibition?) Work to change it. More importantly, I think we both know that a sizeable portion of ARO's have come via the CB...and yes, many even worked a little DX Please don't take my word for it.

http://www.eham.net/survey/391

http://www.eham.net/survey/262

I believe those percentages support the demographic. BTW, I belong to a SSB CB radio club and I've never felt the urge to belt out "Worldwide-worldwide!" (Although the misuse of QRT and QSL kinda rubs me the wrong way. <ggg>)

>Either Congress will HAVE to face the music and restore funding to FCC to
>regulate
>the mess that CB is now, or they will have to face the music and take it
>away so that
>legitimate services can conduct their business unmolested.

No Jerry, they don't HAVE to do a blessed thing...hasn't their absence over the past FIFTEEN years shown us that. I sorely wish they would and would happily contribute funds for that exact purpose, but I'm a realist...so let's not hold our breath. (I don't mean the occasional busts either!) Remember, you're suggestiong the removal of the legal 40 channels from 27.9650 through 27.4050 MHz here. That's why I'm responding. I'll "drop a dime" (Er, quarter.) on any unauthorized ops in any amateur bands in a second.

>There is NO
>"right" to oper-
>ate a transmitter; it is a PRIVILEGE granted by the government. If that
>privilege is
>abused, the offender must face the consequences OR the privilege needs to be
>revoked.

Agreed. Have a happy Independence Day, Jerry.

So you admit, then, that the Foundation Licence scheme has been a
signal failure in achievement of its original and prime purpose ...
i.e. to attract "new blood" into the hobby.

It was never conceived as a means of Class B's evading the Morse test
to gain access to the HF bands, but that is what it has principally
been used for.

Gets me the same answer as forwards - I'm color blind. So Dick,
please tell me exactly how a resistor is polarized.

On the resistors that I use, reading them the wrong way round is
impossible. Gareth must be stuck in a time-warp.

>There! You said it again! I knew I wasn't mistaken. The service commonly
>thought of a CB is at 27 MHz.

Sure. But CB has included far more than 27 MHz, as has been confirmed by
others. When Lenover21 wrote

"45 years ago there was no CB...not even on UHF."

(that's a direct quote, and the context is clear)

he was incorrect. Those who claim that CB was created "about 43 years ago" or
"in 1958" are saying things which are not true.

This is not a minor or trivial point, because one of the reasons FCC put Class
C and D cb on 27 MHz was the failure of Class A and B cb to attract many users.

>
>> Class A and Class B CB on UHF,

>
>If "CB" began in 1958, and I was born in 1958 and I'm 43 years old, then
>what's the problem

The problem is that CB did not begin in 1958.
>

>> Did you ever check out those end-fed antenna links? One was a reprint of a
>>1991 QST article, and the other was by a Dutch ham.

>Yes, I did. Thanks.

You're welcome. Note that although some here claim to be "professionals in radio" and will give you their CV at any opportunity, when you really need some practical info, ol' "Lenover21" offers nothing. Instead, the info you need comes from one of those people he hates - a young red-blooded All-American code-using ARRL-member PCTA Yankee Amateur Extra, who is no expert but does know some things about antennas, the Smith Chart, and search engines.

--

btw, the Koch method has been described here several times. See google. Also on several websites. See Yahoo. I know you want to win the "most posts" brass fig newton again this month, but that's your game, not mine.

oneangryman@hotmail.com (One Angry Man) writes:

>The anger comes from
>Extra class operators who don't know how to solder
>or how to check swr with their own equipment.

I can understand that. And I'm an Extra that not only knows how to solder and check SWR, but who has but who has built many pieces of ham gear - including a couple of SWR bridges.

>But are able to get on hf JUST BECAUSE they can
>pass a code test and a couple of written tests.

Why does that make you so angry? Practical tests like soldering and actually knowing how to use test gear have never been a part of the license qualifications. The code test remains ONLY because S25.5 requires it, and FCC won't ignore/violate that requirement.

Your value system places practical technical knowledge (like soldering and making basic tests) high on the scale of importance. Others place such knowledge very low on the scale. After all, it is quite easy to put a hma station on the air today with no soldering or SWR checking at all.

How many hams (besides me) do you know who have designed and built complete ham stations in the past 10 years?

Consider this:

A would-be ham sees a ham using an HT or VHF/UHF mobile setup. The would-be ham asks "what do I need to know to be licensed to use one of those?" Ham hands the would-be a 200 page book full of Q&A about regulations and technical stuff - and that's just the Tech license manual! Would-be says, "Why do I have to leanr all this stuff just to talk on one of those things?" What do you tell the would-be?
>
>I know one Extra who is a science teacher
>in the local school who asks me questions that a
>beginner in CB would know the answer to.

I used to argue with the science teachers in elementary and high school because I knew more about technology than they did. Get over it.
>
>I also have a friend who is a General who is also

>thinks I don't know what I'm talking about. Then
>later (days to weeks) he tells me he found out
>what was wrong and it's just what I had told him
>in the first place.

Been there, done that. The tests are not a guarantee that the person passing them knows all about ham radio.
>
>It's also from the HOLIER-THAN-THOU PCTAs killing
>people's interest in our hobby with their anal
>retentive chant of NO CODE = NO HAM along with the
>other ELITIST crap that they espouse!

There's one anonymous poster who repeats that nonsense here. Most PCTA folks don't think that way.

>I understand electronics and radio theory pretty
>well BUT because I have not taken a code test
>I'm not allowed on HF at all, but at this time
>the freebanders are everywhere (including 10m)
>and VERY FEW if any ever get in trouble for it.
>That's the FCC's double standard I'm upset about!
>IF I HAD HAIR I'D PULL IT OUT BY THE ROOTS!!!

Have you actually tried learning enough code to pass the test? All you need is to pass the 5 wpm receiving test once, and a few simple writtens, and all of ham radio is yours. The writtens should be no trouble for you.

Morse code training freeware is available on the web at:

http://www.g4fon.co.uk/

>BTW I do know that Willam Flippo got in trouble
>for his jamming, but he was being a REAL pain in
>the ass to a LOT of people, they HAD to do
>something with him.

Exactly. Law enforcement goes after the worst offenders first. One of the things FCC is doing is to make an example of Flippo, showing that they will prosecute, incarcerate and get serious fines imposed.

>Not like the 10m freebanding
>cockroaches we started talking about here. They
>aren't showing up on the FCC's radar like

Jim, I've heard this again and again, and you've peaked my interest.

Please describe your personally engineered and built ham station. Hopefully
your antennas are of a personal design also.

He doesn't hate you guys. He hates the way you behave. You assume that the
physics of radio operate differently outside of the amateur bands. That is
clearly nonsense.

Bruce, I notice no spelling errors other than a couple of abbreviations, but
you do need an apostrophe and a comma or two.

Congrats on the huge improvement.

And you're welcome.

You're biggest fan,
Brian/N0iMD

Dave, what part of "Ed" don't you understand. Let "Ed" answer the question.

Dave, we already know what you did. So pipe down and let "Ed" have his
turn.

Hello "Ed," are you in there? I keep getting "Dave," for some unknown
reason.

I've heard rude Americans do all sorts of things. Do you want him on SSB or not?

> Your stuff is beginning to read like Kim's. You have an opinion on
> everything whether you actually know anything about it or not.

Dave, been there done that. Are you are too "little gun" to ask a station to QSY briefly for a contact? Doesn't the DX know WHO you are?

Only what I've read on here. Dick, why with me having passed a 5wpm exam, do you claim that I know nothing of Morse code, yet having only passed a meaningless paper test you are ready to believe that I could modify a radio and operate it out of band?

You obviously need to go back to the drawing board. You don't make any sense at all.

This is the "Motley Crew" formed by WB2CLN? Many have already been conversing with the great R.H. :)
Some of the Canadians appear to be musicians.
Roger has been looking for a "QRMing hole", maybe this will keep him occupied. Radiosigs might even be able to tune in the mischief on his transistor Sony shortwave, after all these are yanks, no your good ole southern boys.

The so called UK FL licence could never exist under your US FCC docket system
If Proposed ? So many US Radio Amateurs would of countered it
It would of been thrown out at the first hurdle

I don't know about that, Jim. Saying that CB was created "about 43 years
ago" is double the accuracy of saying that "20wpm is almost twice as fast
as 13wpm". :-)

One can design and assemble things like packet networks and linked repeater
systems without doing much soldering (you may need special cables). For
that you need not build the individual transceivers or TNCs or antennas,
but you need to have knowledge of how to make it all work together to
achieve a systems level goal.

> ???? try reading the color code backwards and see what it gets you.
>That was his point.

I get the same answer by reading the color code either way, Dick. The tolerance band is easy to identify. The band farthest from the tolerance band is the first significant digit, the next one in is the second significant digit and the next one in, next to the tolerance band, is the multiplier. The value of the resistor doesn't change based on the way I hold it or whether my eyes read the bands from left to right or right to left.

If you are looking at a pc board, do you have trouble identifying the resistors whose tolerance band appears on your left? Perhaps the above tutorial will help.

>Ed, after finding out that the people you've been working are out of band,
>do you go back and make more contacts with them?

Can't say as that has ever come up for me, Brian. On CW, no US station could be out of band on the bands I operate. I don't know the rules for each of the DX countries I might contact, so I couldn't tell you if they were out of band or now.

Is there an easy way for me to know whether a particular station is licensed to work me on a particular frequency?

OK, Mr. Condesending buttflux, work your magic on someone who can use
it. I know that and you know that. So if there's no tolerance band, you
can read it backwards if you don't know better. That was his point that
you so nicely avoided. Or maybe you are actually that stupid.

Try to approximate staying in focus. You asked a question about
my knowledge of "Ham Radio Magazine" and you think it is about
"VEs working for the FCC?" That's practically incoherent.

>> Couldn't handle the technical stuff in HR, ey?
>
>I wrote an antenna article and a humor piece for those Novices for which
>Brian said I didn't search the bands.

Too bad all my Ham Radio Horizons were given away...I could have looked up your article. "Horizons" was aimed at the less-technically-knowledgeable radio amateur while HR itself was aimed at those with more knowledge. I was on the masthead at HR, not Horizons.

>In its latter years, "Ham Radio" was not successful. The other
>magazines you mention are still in existence.

Are THEY "successful?" Give a definition for "success."

>> Nah...the gist of it was to slam HR and the people that made it
>> possible because I mentioned it and the poor baby couldn't
>> resist dragging others down in the mud because of his hate.
>
>I've never slammed either the magazine or the people who made it

...probably Burning At The Stake for heresy. :-)

Extreme Literalists are like the officials in Salem...not satisfied until
the accused witches are given a trial by fire. For them that is a
win-win situation: If the burned accused dies in the fire they are
proved mortal and absolved (but are still dead); if they do not burn
that "proves" they are witches, not mortal, and the accusers were
right.

The interesting thing about such Burning At The Stake is that NO
ONE has survived...and there was NO "plan" on what to do with
"real witches" surviving! :-)

>> >> "45 years ago there was no CB...not even on UHF."

Careful, Brian, he has all this wood piled up for a stake fire and eager
to put someone, anyone "on trial." :-)

>> You're welcome. Note that although some here claim to be "professionals in
>> radio" and will give you their CV at any opportunity, when you really need
some
>> practical info, ol' "Lenover21" offers nothing.
>
>Its not likely that the military would need such a compromize antenna.

Brian, give me a hand with rope-tying, please. The "Salem judge" needs a
"trial" in addition to a visit to the opthalmologist and a new pair of glasses.

I've been involved with technical discussions as they related to technical
matters on subject threads in here. That, too, is in the newsgroup archives.
A few other Literal Extremists got into the act and ran around trying to say
the remarks were "wrong" or even "inapplicable" without proving their point.
After the long previous message exchange on "Shannon's Law" between
Cecil Moore and Richard Carroll, plus some others, I didn't bother with
much commentary in regards to "practical info."

When Sgt Putz demanded I "start a new thread on microwaves," it became
impossible. That uncivil ignorant sort wanted a FREE four-semester
course on microwave theory and techniques, apparently thinking he
"deserved it." Ridiculous demand. It was either an undisguised sarcastic
comment of his or some idiotic noble's demand of "service." :-)

>> Instead, the info you need
>> comes from one of those people he hates - a young red-blooded All-American

It would be nice to have publicly-available references on this. It would be a shame to force people to pay money to subscribe to special-interest publications (such as "Electric Radio") in order to verify the fact. :-)

It would be intriguing to see the notes and notebook-recorded "engineering" decisions and data leading to the final design. Many of us have done that for a living. :-)

>
>Your postings here indicate otherwise.

Poor baby. Suffering along all these years with a reading deficiency...

Tsk, tsk, tsk...

I've said it a long time ago, have repeated it many times, including several
times in here: Amateur radio is a fine hobby involving radio.

Now let's be fair about it. There are a number of radio amateurs in
here who have a very one-sided, personally-biased viewpoint along
with a too-strong identification of themselves and their experiences
and their personal desires who insist that "all" amateur radio is
exactly as they are/do/experience. In particular, the anal-retentive
PCTAs in HERE who proclaim themselves as gods of radio.

>>I also think that some involved with amateur radio have gone over the edge
>>and proclaimed themselves as THE spokespersons and representatives of
>>the hobby, becoming far too involved with the mystique and myths and
>>legends that were created long ago.
>
>That's a really good description of your postings here.

Impossible. I am for the elimination of the morse code test for ANY
radio license. Along the way...and in having to counter the one-sided
anal-retentive PCTAs...I've had to point out facts of the other radio world
outside of amateur radio...and to challenge the claims and mythos and
legends of amateurism that seem to have originated long before WW2.

>>>It's also clear that you are not interested in any sort of civil
>discussion.
>>

>>Oh? This is a "discussion" venue? :-)
>
>Yes, to those who actually have something to discuss.

We could discuss Jimmie Miccolis' profound lack of reading comprehension...but that is a task for an educator and perhaps an expert in languages plus a psychologist specializing in idol worship and cult religions. Sorry, that's not close to being within the bounds of subjects in here.

GETTING INTO amateur radio involves morse code proficiency by a test for any license class having below-30-MHz operating privileges. As such it is very much within the purview of amateur radio policy.

Prove otherwise.

>>I thought it was a forum where the PCTAs could say anydamnthing they
>>wanted against NCTAs but the vice was not versa.
>
>Nope. Your own posts, and those of many others, disprove that. It's quite
clear
>that the nocodetest and anticode folks (like you) say anything they want -
true
>or not.

Miccolis exhibits extreme personal dissatisfaction at being told of his perception by others not of his viewpoint. He tries to "disprove" that by mirroring others descriptions of him and claiming they are "the image of the descriptor's." Sorry, your mirror is broken.

>Do you mean K4YZ, who frequently calls you a putz? The guy whose name,
>profession, and military experience you've repeatedly belittled? Your behavior
>here has earned you that title, and many more.

By the above statement Jimmie Miccolis condones uncivil, insulting behavior by an amateur extra who is an obvious PCTA, as is Miccolis.

That same amateur extra had the first shots of a non-applicable flame war concerning professions and military experiences, using uncivil and insulting language. Not only that, the same amateur extra received complaints from other amateur extras about his behavior in this newsgroup. That is all in the newsgroup archives.

If Miccolis condones that sort of behavior, then he is guilty of a double-standard of ethics just as I described them.

>>Look at yourself, then, arguing minutae as if it was a life-and-death
>>situation,
>
>"Life and death situation"? Nonsense! I simply point out errors. For example,
>you claimed that I have referred to myself as a "renowned historian", which
>is simply not true.

Do you take pride in your "histories" of amateur radio? Have you said that others have complimented you on such "histories?" You have claimed both in here...including the use of "renown" but not literally preceding the word "historian."

That is an example of the Extreme Literalist who attempts to "disprove" something he already wrote...but one which everyone else has already read to be as described.

This same Extreme Literalist syndrome causes a great deal of mis-direction in message subject threads, concentrating on the Literalist. That is a further indication of a high ego content which demands all pay attention to him rather than the subject.

>They ARE errors. Your resist to admitting them to an extreme degree, and >abuse those who dare to point them out.

No, they are not "resistance to an extreme degree," a ridiculous descriptor which tries to magnify an error way beyond proportion. That magnification makes them virtually one of "life and death proportions" in a flame war ignition.

Errors exist, typographical errors exist. Everyone has fallen victim to them. No exceptions.

To dwell on others' errors, to magnify them out of proportion, to virtually shout "ERROR!" repeatedly...and then accuse the error-maker of being "innaccurate in everything!" is a terribly immature act which is far from discussion or debate on a subject.

If an error exists, point it out with an explanation...but make sure it IS an error rather than a difference in opinion.

>The gist of your messages is quite clear: You hate amateur radio, the morse >code, and want the whole ARS to simply die out and go away - or turn into a >high power multiband version of cb.

Incorrect. Miccolis is guilty as charged of immature, uncivil, and insulting statements about another. In addition he is charged with adoption of double-standards of behavior wherein PCTAs may say or do anything they wish while NCTAs must adhere to rigid civil comportment if they are allowed to say anything at all.

Thank you, Phil (the big reading room in DC is a little far for me...).

What you've just said means that there is NO "Class A," nor any
other "class" of CB. For a about a quarter century the ONLY
Citizens Band Radio Service is the familiar-to-most-everyone
service operating in the 27 MHz region.

The Literalists in here will have a terrible hissy-fit! :-)

Sure ;-)

Both statements are inaccurate, though ;-)

However, saying 'CB was created in 1958' and 'CB did not exist 45 years ago...even on UHF" are both totally incorrect. No 'almost' or 'about' in those statements.

Or consider the PC, which has become commonplace in ham shacks. A complete
custom PC system can be built with just a few simple hand tools and no
soldering.

It all depends what you define as a "component". In the network example, the
components are TNCs, transceivers, antennas, computers, etc. In the PC example,
the components are the various cards, motherboard, drives, power supply, etc.

Axeually, Dick, I'm also color blind. That's why I was prevented from
following a career as an electronics technician or other comm jobs.

Instead I was merely a weatherman. Drawing clod fronts in purple never got
anyone killed. For my hobby I've had to use the VOM to measure resistors,
and have had to splice some really long test leads to use in continuity
tests.

Am I handicapped? Should I apply for a test waiver or go get Social
Security?

It's AB8MQ jamming again. He got kicked out of the
Marshall county ARES and has gone off the deep end
trying to "get even" with imaginary enemies.

Ed, I'm certain that you understood the context. You're a pretty smart guy.
But the key is to "respond" in context. You apparently need some luck in
that department.

What's REALLY rediculous, Lennie, is that you think that I think I deserve
it or that I demanded it.

YOU are the one who has asserted that EE's have soooooooo much to offer
Amateur Radio, yet the only one's offering ANYthing are those who are already
licensed.

YOU have offered nothing.

> Ridiculous demand. It was either an undisguised sarcastic
>comment of his or some idiotic noble's demand of "service."

Nope. Was waiting for you to start a thread in which some real exchange
and learning could take place and cool the flames.

You only proved what most of us already new, and that was that nothing
constructive would ever be forthcoming from you.

Nothing new...Same old Lennie

Putz.

>Along the way...and in having to counter the one-sided
>anal-retentive PCTAs...

As opposed to the anal-retentive ex-radio technicians who think they know something ABOUT Amateur Radio, Lennie?

>I've had to point out facts of the other radio world
>outside of amateur radio...and to challenge the claims and mythos and
>legends of amateurism that seem to have originated long before WW2.

And I am sure that such NG Warrior tales are lot's of fun around the Anderson campfire on cool fall evenings and make for lotsa "ooooh"ing and "aaahhhhh" ing as you wow your less literate family members with your tales of RAWCHSBA (*)

(*) Rear Area Widget Claiming Hero Status By Association...a trait of certain non-combatants trying to impress the unwary of their virtue in combat when same never happened...A cowards way of getting "glory" they didn't earn on the Honor of those who did.

>That same amateur extra had the first shots of a non-applicable flame
>war concerning professions and military experiences, using uncivil and
>insulting language.

Damned, Lennie...Do such lies and mistruths just flow out of your brain without effort, or does it take you a while to think them up?

>Not only that, the same amateur extra received
>complaints from other amateur extras about his behavior in this
>newsgroup. That is all in the newsgroup archives.

Miniscule compared to the reams of complaints about you...from Extras and non-Extras alike.

>If Miccolis condones that sort of behavior, then he is guilty of a
>double-standard of ethics just as I described them.

Once again, you are so proud of yourself. Why are WE not surprised?

>To dwell on others' errors, to magnify them out of proportion, to virtually
>shout "ERROR!" repeatedly...and then accuse the error-maker of being
>"innaccurate in everything!" is a terribly immature act which is far from
>discussion or debate on a subject.

You're right, Lennie...You don't get EVERYTHING wrong...You DO manage to get your name and address right pretty consistently...And your frequent retelling of your Rear Area Widget record is rote by now...pretty hard to screw up something you have repeated so many times....

>Incorrect. Miccolis is guilty as charged...(SNIP)

Oh I LOVE this!

Lennie always attempts to denigrate anyone who he perceives and "judge and jury", yet here he is in black and white reading his own verdict!

And telling Jim that HE has 'double standards"...

What a P U T Z ! ! ! !

>...(UNSNIP) of immature, uncivil, and insulting
>statements about another.

Yep...Andersonian double standard. "Do As I Say, Don't Do As I Do."

>In addition he is charged with adoption of
>double-standards of behavior wherein PCTAs may say or do anything they
>wish while NCTAs must adhere to rigid civil comportment if they are allowed
>to say anything at all.

What a L I A R!

Sheesh!

I wouldn't dream of contacting a rare SSB DX station in the midst of a
pileup by calling him on CW to ask him to move up the band or listen up
the band for me. The size of the gun is not important.

Because it ties to Len's similar earlier comments in the thread.
Pay attention, Brian.

There are plenty of no code technician class licensee's who could eat the lunch of many MANY Extra class licensees here in the states,
The class of license has nothing to do with the quality of the ham or what he may contribute to the hobby.

I find your suggestion arrogant, unwarranted. I started into the hobby as a Novice in 1978 and have since run about every mode, built dozens of hombrew radios, amps and tuners from scratch, and helped several others get licensed. I'm pretty sure at 16 years old I asked plenty of questions like how long a 40m dipole is and what does SWR mean.

The only thing I see that brings this wonderful hobby down are those who feel everyone else should be at thier level or must conform to what they're expectations of the hobby are. Perhaps if you spoke to a few M3's you might realize that they are as interested in learning more and advancing just like everyone else. I don't care if you went Novice to Extra in one day... nobody starts at the top.

On the other hand if you want to boycott hams who are rude, juvenile, and with little or no technical capability I will support you completly. Unfortunatly most of the hams on that list have either a General or Extra class license.

>ranges of 5-20wpm.

Does that include all of the "uuuh", "ummmm", "ya know", repeats of names
and locations, coughing, and interruptions due to phones, kids, TV volume, etc
etc etc?

Normal human speech is 60 -120 wpm. It's slower on the air because we
want to be well understood. It's even slower when you consider most folks will
repeat things that they already said because they really don't have a whole lot
to say, but keep the mike open becasue they feel obligated to do so.

Most CW ops don't feel obligated to try and repeat that which they have
already stated just to transmit longer. It's not necessary.

Phone Is Fun But Code Is Cool.

Oh my! They believe this nonsense in the USA too. :-(

Band occupancy will *never* save our bandwidth from commercial
interests. In the end, it will be sold to the highest bidder ... and
that will not be the amateur radio service.

Feel like you are losing this one, Dick? When you are on the defensive, you revert to your adolescent insult mode. Haven't heard that one since the 8th grade.

>So if there's no tolerance band, you can read it backwards if you don't know better.

So if there is no tolerance band, how would one know which way is backwards and which way is not? The lack of a tolerance band indicates a tolerance,does it not? In that case, the rule is pretty straightforward and you can read the value of the resistor no matter what way it is mounted on the PC board. I can anyway; from what you are saying it appears that you might be having some difficulty..

>Or maybe you are actually that stupid.

Smart enough to know how to read a resistor without a tolerance band, and from either direction at that. Seems that I might have one up on you, OM.

And, true to form, end it with a petty insult! Do you really think that you can insult your way to being right? Think it earns you the respect of your peers?

According to the FCC, if they pass the tests, they have met the standards and have a place in the ham bands.

Perhaps it would be more useful if you posted the content of the questions you have submitted to the Question Pool Committee to acutally do something more than post exclusionary statements on rec.radio.amateur.policy. That way, we could at least have something meaningful to discuss. I can't imagine that anyone would be saying the things you are saying here unless he had done something positive to forward his goals.

Why "in the end" and not right now? So far, amateur radio has fended off most direct assaults on its spectrum.

The real risk is from increasing allocations for secondary, unlicensed devices. And to save our bandwidth from those commercial interests, occupancy is the key. If amateurs were operating high power on the upper part of the 2.4 GHz band, the Part 15 users would not be able to continue to operate there.

>Ed, answer the question.

I can't think of a more complete answer to the question than the one I gave. Do
you have difficulty understanding answers that are more in-depth than yes or
no?

I will try it a bit more simply for you, if that will help.

To my knowledge, no ham has been operating out of band when he or she is in QSO
with me. I have no way of knowing whether a ham is or is not out of band when
they are in QSO with me. I do not check whether other hams are out of band when
they are in QSO with me.

Can I presume that you regularly check whether other hams are out of band when
they are in QSO with you? If not, why did you ask me the question and appear
to expect me to do that?

> the band for me. The size of the gun is not important.

Then, apparently, you really didn't need him that badly.

Here's the reciprocol of that scenario: Ask the French hams to move into
their legal band limits and you colud follow them and continue your little
pileup.

I recognized your post as sarcasm immediately. From his post, Brian appears to believe it to be a likely scenario. Considering the precise meaning your words, that you would successfully lure (one has not lured someone into doing something unless they actually do it) a boatload of Techs onto 160 meters, that is a pretty far-fetched thing for Brian to believe likely.

Perhaps he meant something different from what he said.

Sorry, Dick, but I had no need for an Extra license. You simply cannot
have it both ways.

> If I had an interest in an EE I would have got one.

If I had had an interest in an Extra license, I would have gotten one.
Funny how your argument works both ways, isn't it? Fact is, I would
presently still have had no interest in an Extra license if the FCC had
not turned my Advanced license into a lame duck.

On the contrary, there is certainly an "about" in your statement above.
"About 43 years ago" is actually more accurate than "20wpm is almost
twice as fast as 13wpm".

No, Buttflux, that just shows that you are not nearly as informed as
you think. There were a LOT of resistore manufactured with no tolerance
band. Guess you missed that, huh? So you come up with cute little
derogations.
Well, you can always go soak your pointed head! Might wake you up.

I don't believe you. You're using that as a convenient excuse. FCC
stated that no one will lose anything due to restructuring, and history
bears that out. The Advanced was discontinued from the early50's through
1968 and not one was reverted to any other class. After all the bitching
about Incentive Licensing there is no way that they'd ever do anything
that would revive all that.

I was drawing a similarity to the senario in the states of lesser or easy
exams, I assume the posters concerns were that the
exam for an M3 class or call prefix were less than he thought appropriate.
If that is not the case then explain to me what point I missed.

Why do you have trouble reading an upside down resistor value, Dick?
Are you handicapped in your ability to read right to left? Do you
need a waiver for upside down resistors?

Koch is a gradual learning of each character, adding more to your practice set as you master them (start with 2 letters, add another when you learn the first two, and so on). What I seem to remember reading is that this was used by the US military - WWII or thereabouts to train new operators to do around 30wpm in a month or less.

Hello? Is there another Len Anderson posting here. If not, you'll have
to take the rap.

> Steve has no medical doctorate.

I'll ask you again: What of it?

> >> >Then you launch into a

It's easy, Len. Did you work for "Ham Radio" in the same sense that
VE's "work for" the FCC?

It would be tough for us to discern the difference between the two
magazines without your inciteful explanation.

> >In its latter years, "Ham Radio" was not successful. The other
> >magazines you mention are still in existence.
>
> Are THEY "successful?" Give a definition for "success."

How about being in business at present compared to "Ham Radio". It, as
you know, is defunct.

> >> Nah...the gist of it was to slam HR and the people that made it

What do you find difficult about a couple of simple declarative
sentences, Leonard H.?

> >> You ARE an amateur Superman, aren't you?

> government civilian service. Have you?

Maybe you didn't read the part where I said "no" to being a superman and
told you that I'm a radio amateur. Since you are not a radio amateur
you might want to look around for rec.radio.professional.retired.
You already know that I've worked for the U.S. government as a civilian
so why are you asking? I've also worked for the U.S. government while
in the military. I've worked in the private sector and have been
self-employed as well. Does that cover everything for you?

Good for you. I don't operate out of band either. Your view on working
the trailer trash crowd out of band is a good one too.

What would possess you to write that?

> Here's the reciprocol of that scenario: Ask the French hams to move into
> their legal band limits and you colud follow them and continue your little
> pileup.

I don't see that as a *reciprocal* at all. If I wanted to operate up
the band, I'd be operating up the band. French ops were not the only

Europeans who called me, Brian. Maybe the others couldn't operate up the band. The only little pileups I encountered while operating overseas were during the periods of low sunspot activity in the '80s and '90s while I was OH2/K8MN. Finland isn't very rare but it's a great place to spend the solar minima.

I believe that Brian is a man on a mission. He just hasn't quite
defined what the mission is or where he should direct his indignation.

So if the licensing authority decides to award Ham Radio
licences to all CBers who have held a licence for two years,
that'd be OK with you?

It wouldn't be OK with me, as the current situation isn't OK.

The M3 licence is a CB licence and has no place
on the Ham Bands.

Of course, the people who own the frequencies make the rules.
Declaring that to be "not OK" and two bucks will get you a decent
cup of coffee.

Yes, if they contain an answer. What is your answer?

> I will try it a bit more simply for you, if that will help.

I'm willing to try anything at this point. Give it your best shot.

Ed, not a very good best shot. You failed the attempt. Are you are
incapable of hypothetical thinking?

Yet, for Dave, you are capable of hypothetical thought. Thanks Ed, I see
the good ole double standard still at work.

Dave, what indignation? I merely pointed out the error of your ways. It
couldn't be much simpler than that.

Who, other than you, has said that I am not? Just don't lie and present
them as your own.

> >Got any?
>
> I have had a fair share in my time, Brian.

I've had small successes. I was able to persist until the CCIT Morse Code
was posted, as none of the weight of the ARRL, the PE's posting here, nor
the Code Experts was enough to get it done.

I've single handedly gotten Bruce to post in English. Well, maybe only
once.

I've encouraged Val to keep plugging away on his code that he said he was
going to do.

I have brought many of them to bear

I think most UK Radio Amateurs would be more than pleased to have the
FCCs licences and requirements here ?
I certainly would !

If the FCC were on drugs, bypassed their Docket system,
and introduced the UK FL licence in the US ?
Flooding the Amateur bands with CBers
You would have Extra class Hams going out shooting FCC officials and FL
licensees ;-)

In the UK we just whinge instead of taking action

Steve Terry

C'mon, Dick - don't you know by now that Cecil has a convenient excuse for
everything? ;-)

>FCC
>stated that no one will lose anything due to restructuring, and history
>bears that out. The Advanced was discontinued from the early50's through
>1968 and not one was reverted to any other class. After all the bitching
>about Incentive Licensing there is no way that they'd ever do anything
>that would revive all that.

Of course not! But be sure to remember this: There were lots of false rumors
circulated about incentive licensing, too. Lots of gullibel folks believed
them, and those rumors were the cause of much of the arguing about the proposed
changes.

All the Internet has done is to make it easier for false rumors to snare the
gullible ;-)

--

I remember that back in the mid-1970s there was a (false) rumor in these parts
that the FCC wasn't going to renew any more Conditional licenses. You should
have heard the screaming and moaning about THAT one! Some folks were terrified
of having to pass the tests again. Turned out the rumor was half-true - no more
new Conditionals, and existing ones would be renewed as Generals. Sure gave an
insight into the Conditional, though.

Why were there lots of Conditionals around here, with the Philly FCC office so
close? That's another tale.

Why should radio amateurs operate high power just to interfere
with legitimate, legal Part 15 devices? Deliberate interference is
illegal under US radio regulations.

>And the actual information content is often negative. :-)

Cecil, this person doesn't seem to have had much contact with
air traffic control people on the radio. That information exchange
is handled in excess of 120 words per minute.

Neither does he seem to have any experience with public
safety radio conversation. Any scanner monitoring will yield
knowledge that such conversations are quick, rather faster than
120 words per minute.

Poor speakers have difficulty with rapid speech on the
microphone because they lack experience in radio talk. To
rationalize that they boost morse code proficiency above
reasonable bounds of information throughput.

Either that or they are simply inaccurate in saying that a
"high rate" of (usually maximum) 40 words per minute
equivalent is "quick" while greater-than-120-words-per-minute
speech is "not quick enough." :-)

There IS a double standard when it comes to the PCTA
crowd. :-)

>to take the rap.

You are avoiding the issue. You inserted yourself in this non-
conversation, called me a "cartoon character" as if you were the
model of Superman. :-)

Now you want to misdirect in another direction.

No problem, the double standard of PCTAs in general is quite
evident. PCTAs can say anything they want, be as uncivil as
they want, be as arrogant and superior as they believe they are
and the NCTAs must take it all without a whimper. Tsk, tsk.

>> Steve has no medical doctorate.
>
>I'll ask you again: What of it?

If you don't want to discuss your own behavior, why do you want
to discuss others' behavior?

>It's easy, Len. Did you work for "Ham Radio" in the same sense that
>VE's "work for" the FCC?

Editing others' manuscripts is usually NOT easy. But,
Communications Technology, Inc (the parent corporation of
"Ham Radio Magazine") was not a self-appointed adjunct
authority of US amateur radio as the ARRL wants to be known.

Why do you demand private income disclosure? Do you feel that
you have a "right" to disclose individuals' private information?
If so, why?

>
>How about being in business at present compared to "Ham Radio". It, as
>you know, is defunct.

That's not a definition of "success."

Dictionaries have that definition.

My Webster's New World dictionary defines "defunct" as "dead or
extinct."

If Ham Radio Magazine is "dead or extinct," why is it being
reproduced by CQ on CDs and resold by the ARRL? Note:
$150 gets you three CDs covering all articles of all 22 years
of their existance. [shipping charges extra with the ARRL mail
sales, not so if bought through a retail amateur radio outlet]

>What do you find difficult about a couple of simple declarative
>sentences, Leonard H.?

...that you can't make them or answer them.

>Maybe you didn't read the part where I said "no" to being a superman and
>told you that I'm a radio amateur.

You may consider yourself an absolute marvel but you do not fit
the Superman image of Marvel Comics to anyone else but
yourself.

>Since you are not a radio amateur
>you might want to look around for rec.radio.professional.retired.

There is no such newsgroup.

Part of amateur radio policy is about GETTING INTO amateur
radio and the regulations concerning license testing. You appear
to forbid such discussion except by those who have already
obtained a license. You have NOT explained your exclusionary
demands except that such discussion aggravates you.

>You already know that I've worked for the U.S. government as a civilian
>so why are you asking?

Why is that some "qualification" on being and acting exclusionary
and prohibitive? You demean others' professional experience and
get a hissy-fit when others challenge your experience.

The double standards of the PCTA are highly evident with you.

>I've also worked for the U.S. government while in the military.

Which military? The US military IS part of the US government.

>I've worked in the private sector and have been self-employed as well.

Why is that some kind of qualification? You do not accept others'
experience as having relevance to amateur radio. Why should
others accept your claims?

>Does that cover everything for you?

Not at all. You've never explained why your non-amateur radio
experience is relevant while others' non-amateur radio experience
is "not relevant." You cannot have it both ways.

You have never explained why discussion of regulations on getting into amateur radio must only be done by those who have already been granted a license. You consistently demand that such discussion must be done only by the licensed.

Or saved by the US the docket system

I remember 20 years ago a consortium lead by Motorola put in a FCC docket
reallocating 220MHz to a new class "E" FM CB ;-((
Motorola reconed they could make a load of dosh from selling VHF CBs,
and especially components
Motorola released a series of application lists using Moto components
to would be manufacturers of these new rigs
Motorola stood to make millions

After a long docket struggle 220MHz was saved

Compare that with what happened in the UK about the same time
with Philips and "Mould"
Pye / Philips told the MOD that they could flog them a load of off the shelf
PMR for MOD police / security use
Putting them 12.5 KHz away from UK 70CM repeater outputs ! ;-(

I know 70Cms is shared band, but with a little thought
"Mould" could of been put away down the bottom or top of the band
Just as well "Mould" is now out dated and being replaced

It's just as well Phillips didn't want 70CMs for CB !

Steve Terry

As is YOUR double standard of calling people names, analoginzing them with nazis for not agreeing with you, then crying "FOUL" whe the same is revisited upon you.

And YOU think that no one except you notices...What an idiot.

>>> Steve has no medical doctorate.
>>
>>I'll ask you again: What of it?
>
>If you don't want to discuss your own behavior, why do you want
>to discuss others' behavior?

You were asked a direct question, Lennie, and you will not answer it.

This is NOT the first thread in which you have tried to make some issue of my lack of a license to practice medicine. Yes, I have had the priviledge of saving more than one person's life, and NO, I did not require a degree in medicine to do it. The law does not require it...

JUST like they do not require a degree in electronics in order to operate an Amateur Radio station...as much as I know that irks you...

>>It's easy, Len. Did you work for "Ham Radio" in the same sense that
>>VE's "work for" the FCC?
>

The degree of difficulty in editing a magazine was not the question, Lennie. STAY FOCUSED.

>Why do you demand private income disclosure? Do you feel that
>you have a "right" to disclose individuals' private information?
>If so, why?

You certainly do, Lennie. For what ever reason you thought it was necessary to do so, you felt it necessary to discuss my nursing licensure in

Georgia...Cited my license number, date of expiration, level of licensure, etc etc etc.

Another Lennie "double standard"...??? YOU cite "double standards" against Dave (see above), yet feel perfectly at-liberty to do the same thing with impunity.

Why is that? (Another direct question...go ahead, Lennie, add this one to the pile)

>No problem, always glad to help the ignorant.

Whoever helps you should be fired, Lennie. Your batting average on accuracy in Amateur and other radio policy matters is not faring well lately.

>>> Are THEY "successful?" Give a definition for "success."
>>
>>How about being in business at present compared to "Ham Radio". It, as
>>you know, is defunct.
>
>That's not a definition of "success."

This little dodge is cute....Watch!

>
>There is no such newsgroup

Then perhaps you should start one, Lennie. Your presence here is certainly inappropriate.

>The double standards of the PCTA are highly evident with you.

You've provided four very glaring example of your own double standard right here, Your Geezerness. You ought to have your stuff proofread by a ten year old before you let it fly.

>Not at all. You've never explained why your non-amateur radio
>experience is relevant while others' non-amateur radio experience
>is "not relevant."

Could be because there's not been any aspect of his "non-government"
experiences that have not included SOME aspect of Amateur radio.

>You cannot have it both ways.

Why not? You certainly think YOU can....

>You have never explained why discussion of regulations on
>getting into amateur radio must only be done by those who have
>already been granted a license. You consistently demand that
>such discussion must be done only by the licensed.

Perhaps because the licensed have some practical experience in such matters
and a better perspective on what is relative to Amateur Radio and what is
not...

At best, all you can offer is an opinion. And so far, a not very well
informed opinion.

As ususal.

Putz.

>that "proves" they are witches, not mortal, and the accusers were
>right.

"Extreme Literalists"... hmmm...

Could they be:

The Extreme Literalists who get all worked up over the lack of a specific WORD RATE in the ITU treaty?

The Extreme Literalists who insist that Morse code sent with Farnsworth spacing is not Morse code?

The Extreme Literalists who are come all unglued because a magazine that is no longer published is called "defunct"?

The Extreme Literalists who insist that "CB" means Citizens Band in the 27 MHz region, and nothing else?

Answer: All of the above.

Jim, N2EY

>is handled in excess of 120 words per minute.

OK, Lennie...I'll show you MY pilot's license, you show me yours.....

The exchange on ATC frequencies is NOT the average "discussion", nor is it random.

ATC has very specific phraseology and delivers that information in a predictable and expected format. Deviation from accepted ICAO terminology, prowords or format will bring rapid chastizing from ATC.

(Guess you're still using ATIS as your source of aviation experience, eh Lennie?)

JUST LIKE a contest on Amateur Radio. In a contest, I can rattle on at 40WPM becasue I know he's going to give me a certain "report", and I him the same.

In NORMAL conversations, I hover at 25 WPM.

>Neither does he seem to have any experience with public
>safety radio conversation. Any scanner monitoring will yield
>knowledge that such conversations are quick, rather faster than
>120 words per minute.

Same stuff, Lennie....Information will be delivered in a predictable manner. Certain 10-codes, procedural signals, etc. And very little, if any "chit chat"...ESPECIALLY in major metro areas where such is absolutely forbidden and likely to bring the rath of the Watch Commander down on you.

>There IS a double standard when it comes to the PCTA
>crowd.

Not in THIS context, Lennie. Sorry...YOUR lack of practical experience is,
once again, glaring.

This is true - all vegetables such as turnips, potatoes, carrots, parsnips, spinnach and Gareth are composed of tiny wee charged particles. :o)
Turnips are especially tasty when stewed slowly along with carrots, mushrooms and a good piece of steak then served with a liberal helping of protons (add salt and pepper to taste.)

I can't tell the difference between brown, red, and orange. When I
am dealing with resistors, I have to have an ohm-meter (or a technician
like Dick) around.

My, my another buttflux! But no surprise this time - you've been a buttflux all along. So repost where I ever suggested much less said I had any problem reading any color code in any position. Didn't happen, and its no surprise you missed the boat yet again. But some newbies who just learned the color code and have no experience might just read it backwards.

His mission is to spin in ever decreasing circles until he craps out.

Mike, he's capable of hypothetical thinking in other arenas. Its a double
standard kind of thing.

Not at all, Cecil. My idea of integrity is that I broke no amateur radio regulations of the country from which I operated. Perhaps you can assist Brian with his draft protest to the French PTT and REF.

So that's Brian's game! Shoulda known all along! He's a leftover from
that crew! What did we expect? Thanks for helping clear that up, Dick.

Henceforth Gadfly will be SWINE.

The self-righteous indignation you've exhibited each of the several times you've attempted to trot out this tale in order to make it appear that I was guilty of some wrong doing. That indignation. You pointed out the error of the ways of some French 6m ops and have tried to take me to task on it. Allow me to suggest once again that you contact the French PTT and REF and vent your spleen on them. The alternative is for you to continue your ranting toward me while making yourself look like a complete boob.

I must have missed it but I like the concept. I was fond of Charles Schulz portrayal of Linus as a "wild-eyed fanatic without a cause" back in the early sixties. I'm expecting Brian to drop by and spray paint protest slogans on my car.

So you are willing to reverse any recently declared stand except those
involving an FCC reg? What shall we call that--partial integrity?
regulatory integrity?

Again, you need to take the matter up with Dick and Larry. I operate
phone, CW, RTTY, etc. If you want to express your indignation, you need
to express it where it might do some good. The situation is much like
directing your ire over the habits of scofflaw French 6m ops toward me
instead of contacting the French PTT and REF.

That's right. Sometimes, whether you're an American ham not wanting to
do something liddy like breaking a DX pileup on CW to ask the op to move
up or whether you're a French ham who hears a DX station operating on a
frequency not permitted by your regs, it is better not to transmit at
all.

I don't recall asking for a solution. In your "reciprocol" scenario, I didn't even have a problem which required a solution.

>
>"Extreme Literalists"... hmmm...
>
>Could they be:
>
>The Extreme Literalists who get all worked up over the lack of a specific
>WORD RATE in the ITU treaty?

No. There is NO word rate specified in the 1958 CCITT document
referenced in Part 97.3 (26).

There is no specific "treaty" at the ITU. There are only "recommendations"
and they have NO force of law, only an honor obligation by adminstrations.

Pity that an Extreme Literalist such as Miccolis cannot make his
nastygram correct. :-)

>The Extreme Literalists who insist that Morse code sent with Farnsworth
>spacing is not Morse code?

No. Extreme Literalists such as Miccolis keep insisting that
high-rate morse code is as quick as ordinary speech. :-)

I've never argued that "Farnsworth spacing" is "different" from "morse
code" (International Morse Code). Pity that an Extreme Literalist such
as Miccolis cannot get nastygram #2 correct. Tsk, tsk.

>The Extreme Literalists who are come all unglued because a magazine that is
>no longer published is called "defunct"?

No. My "glue" over Ham Radio Magazine still holds. So does CQ
and the ARRL who sell a collection of all HR articles from all 22
years of its publication. Hardly defunct when it still sells ($150 for
the three-CD set, shipping charges extra if ordered by mail from
ARRL, no shipping charges if bought through a retail ham outlet).

I mean Extreme Literalists who come all unglued if nobody bothers
him about "Electric Radio," a subscriber-only fanzine that isn't
found on big newsstands...such as Miccolis.

Tsk, tsk, nastygram #3 also incorrect.

>The Extreme Literalists who insist that "CB" means Citizens Band in the 27
>MHz region, and nothing else?

Not me. For over a quarter century "CB" has referred ONLY to the
single "band" in the 27 MHz region and nothing else. See Phil
Kane's reminder and a summary of a 1976 Report and Order.

I meant Extreme Literalists such as Miccolis who cannot bear that
he his corrected when wrong and has to go to such idiotic word-
specific extreme literalism in an attempt to misdirect "fault" to
others. Miccolis picks on nits as if they were gold nuggets...but
they are only iron pyrite known as "Fool's Gold."

>Answer: All of the above.

Incorrect on all four, Miccolis. Sorry, but your Burning At The
Stake has to wait until your wood is dry. You are all wet.

Steve:

Having some 4-land knuckle-dragger chew you out at length for not remembering your 10-10 number is "fun?" That's the incident that caused me to disconnect my microphone from my HF rig with a pair of "dikes."

Brian:

I was just making an example based on an unfortunate reality within our society. I have plenty of "room to talk," because there are plenty more such examples, thanks to the liberal elite who create misery to keep themselves in power.

Came out of the last days of Lil' Abner. Al Capp.

Back about 1960 picketing was the rage so a group of us in high school
chose to picket the sewer plant. Some of the signs had MORE on one side,
LESS on the other. One I remember said, 'I don't know what I stand for,
but I'll fight'. Didn't last long and amused hell out of the
sludgepumpers.

That's a great idea. In order to speed up bringing our proficiency to that level, I propose that one month of the year, say August, be declared "Microphone Free". This would be a microphone free holiday similar to the tax holidays we see in certain states. Only code would be permitted on all of the band segments. I wouldn't be surprised to see those code speeds way up there, at least into the 30 wpm range. What do you say to this? Let's make every August "Microphone Free"!

Dick, reading the color code backwards doesn't change the value of the
resistance. You, as an Extra, should know that.

Before going on 10, add up all your credit card numbers plus your phone
number plus any other numbers near and dear to you, multiply by the
barometric pressure in millibars, and tell them it is your Universal
Number. Somewhere about the 12th digit they get the hint.

They make reproduction furniture, reproduction pottery and even
reproduction radio gear too. I can even order "Best Radio Diagrams of
1938 on CD yet Supreme Publications is defunct too. Do any of those
issues of Ham Radio on the CD set bear a 2002 date?

> yourself.

No, you're getting confused again. I don't consider myself to be an
absolute marvel. I consider myself to be a radio amateur.

> >Since you are not a radio amateur
> >you might want to look around for rec.radio.professional.retired.
>
> There is no such newsgroup.

See! There's a new self-appointed advocate position for you to take on.

> Part of amateur radio policy is about GETTING INTO amateur
> radio and the regulations concerning license testing. You appear
> to forbid such discussion except by those who have already
> obtained a license. You have NOT explained your exclusionary
> demands except that such discussion aggravates you.

You and I both know that you've taken longer getting into amateur radio
than most folks spend actually being radio amateurs.

> >You already know that I've worked for the U.S. government as a civilian
> >so why are you asking?
>
> Why is that some "qualification" on being and acting exclusionary

I didn't read a challenge.

> The double standards of the PCTA are highly evident with you.
>
> >I've also worked for the U.S. government while in the military.
>
> Which military? The US military IS part of the US government.

Do you read your own stuff? Your question was about a civilian role.
I wasn't in the military as a civilian.

> >I've worked in the private sector and have been self-employed as well.
>
> Why is that some kind of qualification? You do not accept others'
> experience as having relevance to amateur radio. Why should
> others accept your claims?

Man, you ARE confused today! I didn't make any claim toward any of my
employment qualifying me to speak about amateur radio. I've been an
active ham for 39 years. THAT qualifies me to speak on amateur radio.

> >Does that cover everything for you?
>
> Not at all. You've never explained why your non-amateur radio
> experience is relevant while others' non-amateur radio experience
> is "not relevant." You cannot have it both ways.

See above. I don't expect it "both ways".

> You have never explained why discussion of regulations on
> getting into amateur radio must only be done by those who have
> already been granted a license. You consistently demand that
> such discussion must be done only by the licensed.

You've had your say with the FCC and you've had more than your say here.
You've made no attempt at all to achieve even the simplest entry level
license. What weight should be given to your views, Len? What of
importance have you imparted here?

It's coming back now. Capp was one-of-a-kind. I loved it when he
revealed on the Carson show that he held the socks on his wooden leg up
with thumbtacks.

> Back about 1960 picketing was the rage so a group of us in high school

WEBN radio in Cincy used to run ads for "Brtue Force Cybernetics--the
company which creates a need, then fills it".

They are selling those COPIES because the magazine itself is
DEFUNCT....Not in business any longer...No longer publishing...You cannot write
to "Ham Radio" magazine at ANY address and request reprints, etc.

>>The Extreme Literalists who insist that "CB" means Citizens Band in the 27
>>MHz region, and nothing else?
>
>Not me. For over a quarter century "CB" has referred ONLY to the

>Kane's reminder and a summary of a 1976 Report and Order.

Non-sequitor, Lennie my boy...CURRENT FCC regulations (that means TODAY,
Your Putziness...NOT 1976) details several different subparts, all of which are
categorized under "citizens band". 47CFR95.401 refers.

That, by the way, is dated 1983, NOT 1976.

>Incorrect on all four, Miccolis. Sorry, but your Burning At The
>Stake has to wait until your wood is dry. You are all wet.

Oh, the scales have fallen from my eyes! If Brian says he is leaving
the group but find out that he is *mistaken*, immediate reversal is not
a problem. Thank you for your insight, mystical one.

What is this 10-10 number stuff anyhow? I've heard about it, and heard hams using it on 10 meters, but I'm not familiar with it.

I am not color-blind (colour-blind?), but I never trust the markings
on resistors. I always check each resistor with an ohm-meter before
using it!

Dave isn't the Wonder Bread of amateur radio that he wants us to believe.
Apparently, he thought his working French hams out of band was an OK thing
to do, till I called him on it.

Now he has to defend his misdeeds even if it means destroying my reputation.
Such is life on rrap. I'm used to it. Blaze away.

Why would there be any indignation over a double standard?

The situation is much like
> directing your ire over the habits of scofflaw French 6m ops toward me
> instead of contacting the French PTT and REF.

Scofflaw French 6M Ops? Is that anything like admitting that you knew they
were out of band? I think it is.

Just how long will it take for you to admit it?

> > > Good for you. I don't operate out of band either. Your view on

Yes, you did. You complained about a pileup on 14.132 MHz phone, but you
couldn't operate phone there. I offered a solution. You rejected it
because you suddenly found religion.

But you don't know any of the people who wrote Part 97. And your argument is that you don't believe the French ham who came on here and gave French 6M band limits because you didn't know him.

Dave, again, if someone made you aware that you were working foreign hams which were operating out of band, would you keep making contacts with them, knowing even though you were within your band limits, that they were illegal?

So what is your 10-10 number? After that deep mental scarring that you
received, I would think it a permanent part of the back of your eyelids by
now.

OK, we're worried that a newbie that just learned the color code might read
a resistor backwards, but we're not worried that a newbie who is just
learning the code will know which exam to ask for and possibly be denied
access to the amateur radio service because the Regulations specify Morse
code at 5WPM, but the Examiners are testing Farnsworth code at 13-15WPM.

Now I get it. You're an idiot.

Heh heh heh...for $150 anyone can get 22 years of Ham Radio
Magazine on CDs and print out paper copies all they want
for only the cost of paper and ink...considerably cheaper than
the $3/page charge for ARRL members ($5/page non-members).

Oh, pity those poor Salem judges...their wood is all wet and
they can't light a bonfire to keep their icy-cold hearts warm.

To them, paraphrasing: "Ain't life a witch?" :-)

writes:

>I've encountered you here for a number of years. I've not yet noticed
>you being civil but I have noted you saying anything you want.

Dave poor baby..."being civil to you" is not defined as agreeing
to everything you write or accepting all the trash you say about
others.

You are being deliberately antagonistic and confrontive here,
your own rage vented on another only to satisfy yourself. Try
approaching a subject some time. Try doing it with an open
mind rather than reacting with rage against all those "unworthies"
who do not believe in you and accept all your opinions.

>You seem fogged, Leonard H. You brought Steve's medical qualifications
>up as an issue.

They are NOT an "issue" except to yourself and that other ego-need
creature. You, repeat YOU keep bring this non-issue up.

>Oh, then being defunct must not fit the definition either.

Answer the question or be considered intellectually defunct,
Dave. You've gone off the deep end again in working the spite,
anger, sarcasm bit very poorly.

You keep wanting to use "defunct" as if it is "extinct" or "dead."

You keep wanting to use "defunct" as a thinly-disguised
personal attack.

All you are, by example, is an ego-driven spiteful person who
gets their jollies out of harassing and/or insulting those who
do not agree with him. By continuing your "defunct" attack,
you've now insulted a number of hams who worked hard to
make Ham Radio Magazine a success for 22 years.

>> Dictionaries have that definition.
>>
>> My Webster's New World dictionary defines "defunct" as "dead or
>> extinct."
>>
>> If Ham Radio Magazine is "dead or extinct," why is it being

...then get your reproduction system busy, old man. So far, all
you've done is screw yourself with your own words.

>I can even order "Best Radio Diagrams of
>1938 on CD yet Supreme Publications is defunct too.

1938-era radio technology may be too advanced for you. Go easy
on such high-tech information until you get up to speed...say at
the 1960 level.

>Do any of those
>issues of Ham Radio on the CD set bear a 2002 date?

Why are you so concerned. Can you understand any tech
level as advanced as the year 2002?

>No, you're getting confused again. I don't consider myself to be an
>absolute marvel. I consider myself to be a radio amateur.

I concede that you are an amateur.

>> Part of amateur radio policy is about GETTING INTO amateur
>> radio and the regulations concerning license testing. You appear
>> to forbid such discussion except by those who have already
>> obtained a license. You have NOT explained your exclusionary
>> demands except that such discussion aggravates you.
>
>You and I both know that you've taken longer getting into amateur radio
>than most folks spend actually being radio amateurs.

Misdirection again by the demands to "get a license first, then be
'allowed' to talk about getting in."

>> Why is that some "qualification" on being and acting exclusionary
>> and prohibitive? You demean others' professional experience and
>> get a hissy-fit when others challenge your experience.
>
>I didn't read a challenge.

So, you get into a hissy-fit anyway?!? How strange.

Regardless of your emotional instability, please try to explain
why you are being exclusionary and prohibitive?

Is this some kind of "extra thing?" Or is it part of the PCTA
double standard?

>> The double standards of the PCTA are highly evident with you.
>>
>> >I've also worked for the U.S. government while in the military.
>>
>> Which military? The US military IS part of the US government.
>
>Do you read your own stuff? Your question was about a civilian role.
>I wasn't in the military as a civilian.

You are confused and raving again. Please note that the US military
is part of the US government. If you were IN the military, you are

PART of the government, not "working for it." [the days of the
mercenary for US military are long gone]

>Man, you ARE confused today! I didn't make any claim toward any of my
>employment qualifying me to speak about amateur radio. I've been an
>active ham for 39 years. THAT qualifies me to speak on amateur radio.

Incorrect. You've made several references to "being a ham in
foreign countries, having a license in that country, etc." while
in State Department employ. Would you have voluntarily traveled
to Guinea-Bisseau and lived there just to be the "only ham in the
country?!?"

>> Not at all. You've never explained why your non-amateur radio
>> experience is relevant while others' non-amateur radio experience
>> is "not relevant." You cannot have it both ways.
>
>See above. I don't expect it "both ways".

You expect it ONLY your way. That's quite obvious.

>> You have never explained why discussion of regulations on
>> getting into amateur radio must only be done by those who have
>> already been granted a license. You consistently demand that
>> such discussion must be done only by the licensed.
>
>You've had your say with the FCC and you've had more than your say here.

...and I will continue to be heard by both.

>You've made no attempt at all to achieve even the simplest entry level
>license.

There was NO requirement or regulation stating that a license was
necessary. None is required. Except among those poor souls
who use their license status-rank-title as some kind of "qualification"
on knowing it all.

>What weight should be given to your views, Len?

I leave that up to the reader.

Those who are confirmed PCTAs will ignore it and become
argumentative, confrontive, and abusive...because they have no
valid argument against the NCTAs.

Other readers have varying opinions and are capable of
independent thought.

The FCC does not require its staff or commissioners to hold
amateur radio licenses in order to make regulations about US
amateur radio. Why do you, not with the FCC, demand
such adherence to standards which are NOT codified law?

The FCC makes decisions about regulations based on US citizen input and the logic of that input. Most readers have US citizenship and logic capability. I do not demand that they share my viewpoints, just that they listen to another's view with an open mind. Why do you close your mind and demand others adhere to your standards?

>What of importance have you imparted here?

Irrelevant use of the word "importance." This is discussion, debate, argument. All readers can agree, disagree, remain indifferent, as they choose. Readers have that option. They are NOT required to adhere rigidly to your specific personal desires or to the so-called "traditions" demanded to be followed. Most readers can think and reason. Reason and reasonableness is a positive attitude in discussion and debate on laws and policies thereof.

If anything of "importance has been imparted," it is showing the baseness and perfidious attitudes of those long-timers who think that all policy should reflect their wishes just because they think they are so great. You have demonstrated that attitude in great abundance in here. QED.

Nonsense. Your attitude towards amateur radio and radio amateurs has been made
quite clear here over the years.
>
>I've said it a long time ago, have repeated it many times, including several
>times in here: Amateur radio is a fine hobby involving radio.

You've said it a few times in here - in between mountains of words condemning
virtually everyhting in ham radio.
>
>Now let's be fair about it.

HAW! That's a GOOD one!

>There are a number of radio amateurs in
>here who have a very one-sided, personally-biased viewpoint along
>with a too-strong identification of themselves and their experiences
>and their personal desires who insist that "all" amateur radio is
>exactly as they are/do/experience.

There are? Who?

While we're at it, consider non-radio amateurs in here who have a very one-sided, personally-biased viewpoint along with a too-strong identification of themselves and their experiences and their personal desires who insist that amateur radio MUST be what they say it is.

>In particular, the anal-retentive
>PCTAs in HERE who proclaim themselves as gods of radio.

"Now let's be fair about it." Be sure to include the anal-retentive NCTAs in here who proclaim themselves as gods of radio.

>>>I also think that some involved with amateur radio have gone over the edge
>>>and proclaimed themselves as THE spokespersons and representatives of
>>>the hobby, becoming far too involved with the mystique and myths and

If it happens, it must be possible. It happens.

>I am for the elimination of the morse code test for ANY
>radio license.

So is K2UNK - but he gets his points across without uncivil behavior or insults. He does more to promote the NCTA cause in a single post than you have done in all the years you've been posting here.

You're against the code test and much much more. What we don't know, even after years of reading your rantings, is what you are FOR, except the age requirements for a ham license. Such age requirements are totally unnecessary, and would be harmful to the ARS, but you are for them Interesting. .

>Along the way...and in having to counter the one-sided
>anal-retentive PCTAs...I've had to point out facts of the other radio world
>outside of amateur radio...and to challenge the claims and mythos and

Nope, it works fine. But there are none so blind as you who will not see.
Instead, you insult the messenger.

>>Do you mean K4YZ, who frequently calls you a putz? The guy whose name,
>>profession, and military experience you've repeatedly belittled? Your
>>behavior here has earned you that title, and many more.
>
>By the above statement

(N2EY)

>condones uncivil, insulting
>behavior by an amateur extra who is an obvious PCTA, as is

(N2EY)

Nope. I simply point out that your uncivil, insulting behavior has earned you
the same in response.

You, on the other hand, not only condone such uncivil and insulting behavior,
but constantly engage in it yourself.
>
>That same amateur extra had the first shots of a non-applicable flame
>war concerning professions and military experiences, using uncivil and
>insulting language. Not only that, the same amateur extra received
>complaints from other amateur extras about his behavior in this
>newsgroup. That is all in the newsgroup archives.

So are your uncivil and insulting remarks against anyone who disagrees with you
or points out your mistakes. Even if they do so in a civil fashion, you call
them names, make fun of their jobs, names, etc.

>>>Look at yourself, then, arguing minutae as if it was a life-and-death
>>>situation,
>>
>>"Life and death situation"? Nonsense! I simply point out errors. For
>>example,
>>you claimed that I have referred to myself as a "renowned historian", which
>>is simply not true.
>
>Do you take pride in your "histories" of amateur radio?

There is only one, and it's a history of amateur radio licensing in the USA
since the end of WW2. Very specialized, but relevant to rrap. You have dissed
it, but have not proven one fact of it to be incorrect.

What's not to take pride in?

> Have you said
>that others have complimented you on such "histories?"

I don't recall doing so - but so what if I did? You sound jealous.

>You have claimed
>both in here...including the use of "renown" but not literally preceding the
>word "historian."

Pure gobar. Produce the post where I have done so.

You claimed that I called myself a "renowned historian". The use of quotation
marks indicates a direct quote. But you have not produced any proof.
>
>That is an example of the Extreme Literalist who attempts to "disprove"
>something he already wrote...but one which everyone else has already
>read to be as described.

More gobar. You made the claim, now prove it. All it would take is a google
link. But you won't/can't do that - it would show that you made yet another
mistake.
>
>This same Extreme Literalist syndrome causes a great deal of mis-
>direction in message subject threads, concentrating on the Literalist.
>That is a further indication of a high ego content which demands

Yup, you feel like you are losing this one.

> that just shows that you are not nearly as informed as
>you think. There were a LOT of resistore manufactured with no tolerance
>band.

Of course there were, Dick. The position for the tolerance band was blank.
That indicated a 20% tolerance resistor. I guess I just assumed that you would
know that the blank band had as much meaning as silver or gold. It appears
that in some cases, assuming that another knows something fundamental could be
a mistake.

> Guess you missed that, huh? So you come up with cute little
>derogations.

Guess you missed that, so you come up with juvenile name calling.

>Well, you can always go soak your pointed head! Might wake you up.

Yup, you are losing.

>
>No. My "glue" over Ham Radio Magazine still holds. So does CQ
>and the ARRL who sell a collection of all HR articles from all 22
>years of its publication.

Those are OLD publications. They're a part of HISTORY. (sound familiar?) The
CDs are just a way of reprinting old information. Nothing new is presented. The
magazine called 'Ham Radio' is defunct, just like Atwater Kent is defunct, even
if reproduction radio sets are made with that name on them.

The 4th edition of the 'Radiotron Designer's Handbook' is also available on CD.

>Hardly defunct when it still sells ($150 for
>the three-CD set, shipping charges extra if ordered by mail from
>ARRL, no shipping charges if bought through a retail ham outlet).

Sales tax often applies.

Yup, that's it. When the accuracy reaches 90-95%, one new character is added to the set. Speed is usually set in the 16-18 wpm range so that the characters are heard as units of sound.

The system was worked out by a German psychologist named Koch, and published in 1936.

>Ditto for Dick. Two faced.

Wow, Brian, you forgot me. Maybe we should keep a list of those on rrap you believe are two-faced. So far, it seems to end up being anyone who ever disagrees with you about anything.

Hypothetically, what do you think that means?

>specific law against it. Do you disagree?

We all believe that there are things others shouldn't do in spite of their being no law against their doing so. The reason there is no law is probably because we all have a different list of personal unwritten laws.

When I operate, I don't check to see if every ham who QSOs me is licensed to operate on the frequency we are using. Have I broken your unwritten law?

The person making the mistake suffers the consequences whether he knows
the color code or not. Reality doesn't care if you know the color code.
Reality only cares if you make a mistake. You may know the color code
perfectly, reach for the correct resistor, and pick up the wrong one.

Your task was harder than mine, Ed. My early 50's ARRL License Manual
had only 3 pages for Novice and 10 pages for General. Seems the exams
have been getting harder over the years rather than easier.

At the speed I'm learning at, it will take me that long
(40 years) just to be able to pass the 5wpm test anyway!
I did download the G4FON program and it does look
promising. But OTOH so did Super Morse, Morse
Academy, MorseCat, Morse Trainer, and Morse MIDI.

Oh well at least I'm trying! :^)

I built one of those Ten Tec 705 desk mics and you aren't kidding. The red
and
orange are "almost" the same color. So I broke out the trusty DVOM and went
for it. And I'm sure glad I did it that way also, as it worked the first
time :^)

I've held a CB radio license since 5/12/1975 (expired 1980) and the FCC
gave me a ham radio license, does that count? If so can I have the $100 ;^)

Ed, your use of "un-stupid" was an unnecessary distraction. Please try to stick with English in future responses.

Prove the ARRL told it 12 years ago. Keeping it secret for 12 years then making the proclamation was "stupid," to use your words. I would call it dishonest.

> Do we not apply such double standards throughout much of our lives?

Ed, you would answer the question if Dave's rep weren't on the line. Why do
you feel you must protect Dave at all costs?

This is part of the definition of Cronyism, and it is, of course, a double
standard.

Show us your short list.

> When I operate, I don't check to see if every ham who QSOs me is licensed
to
> operate on the frequency we are using. Have I broken your unwritten law?

Nor do I. But when I'm informed that the folks I'm talking to are out of band, am I supposed to keep talking to them just because I'm within my band limits? Who wants to talk to bootleggers anway?

When a Novice that you personally know comes up on a non-220mhz linked 2M repeater, do you carry on with him or her all day long just because you are within your operating privelege?

You and Dave say YES to both questions!

And then question my reputation.

Cronyism at its worst.

Losing *WHAT*?????

One can only assume that you've reverted to your 60's pothead days and
have gone into hallucinations. To lose something, there has to be a
contest. If you think that my simple assertion that a newcomer might
indeed read a resistor color code backwards in the absence of sufficient
experience to know better, you are hallucinating without question. If
you think I don't know how to read a resistor color code I pity you. I
was reading all versions of them while you were sucking the pot as a
preteen. No, I haven't forgotten how. If you think a newcomer could
never read a color code in reverse that's your shortcoming, not mine.
Live with it instead of dumping on me.

If there is a contest it's in your imagination, and there it will stay.
Me calling you a buttflux was response to your lunatic post. Do it
again, and most likely so will I. You're a mess,

Dick, apparently you were in a contest with yourself and you were the big loser. You've lost your self-respect.

If you can't respect yourself, you can't respect anyone else. And you respect no one on rrap.

Get a grip, play nice, lose the cronyism. If you disagree, prepare a rational argument and respond without all the name calling and sniping.

Good luck on getting your self respect back.

73, Brian

So it's a bet? Give me ANY address in the entire world, Steve, and
I will request reprints from that address. You lose. You didn't
say I couldn't *obtain* reprints, you said I couldn't *request* reprints.
I can request ANYTHING in the world from ANY address in the world.

You remind me of the woman at the CA DMV who told me I couldn't transfer
my ham plates from my motor home to my pickup. I told her, too late,
I've already done it. You owe me a lobster dinner.

Exactly what in my statement above is incorrect, Dick? Seems you are the
one who lives in a different universe from the rest of us where knowing
the resistor color code protects you from every making a mistake for
the rest of your life.

Have you ever said you would never do something and wound up doing it?
After that gigantic hangover, you never said, "I will never touch another
drop of booze"? Every human being has said they weren't going to do
something and then did it later anyway, Dick. If you are human, you have
done exactly that many times in your lifetime! Get real!

Sounds to me like an angry member of the PCTA suffering from sour grapes
posting anonymously to try to stir up ill feelings toward the gentle NCTA
folk. Nice try, didn't work.

Proper American.

At least I try. :)

To many members of my family use Redneck American, or Southern American.

individual attempting to lay the wrong doing of others at my feet.

Yep.

> Dave, you're the one on thin moral ice. Mend your ways, and stop defending
> an indefensible position. That is all.

I've defended my position ably and it has been an easy thing to do.
Your "moral thin ice-mend your ways" stuff is simply more self-righteous
indignation on your part.

Up until now, you've not answered the question (you're big on telling
folks to answer the question): Have you contacted the French PTT and REF
and brought the matter before them. If you haven't done so, you are

really not interested in the issue at all.

Brian, it would be impossible for me to top your act in the silliness
department. The high ground you think you hold is illusory. I wasn't
"out of band" when working French hams on 6m from Tanzania. If there
were French hams out of band while working me, you need to contact the
French PTT or REF. I don't know how many times I need write this before
you catch on. Protest the behavior of French scofflaw hams.

...and I didn't accuse you of being a vandal, only of not knowing what
your mission is.

Your manner of writing indicates indignation. Again, I'm not involved
in your pissing contest with Larry or Dick. Feel free to work out your

angst with either or both of them.

> The situation is much like

You'd be wrong. If French hams worked me while operating out of their
assigned 6m segments, they'd be scofflaws. Have you taken the matter up
with the French PTT or the REF?

> Just how long will it take for you to admit it?

It won't be during this life.

Once again, you're reading between the lines rather than reading the
material as presented. I've told you what I'd do and not do. I can't
speak for what French hams will do.

> > > > > Here's the reciprocol of that scenario: Ask the French hams to move

operate phone there. I offered a solution. You rejected > it because you suddenly found
religion.

No, Brian. I found that the solution to my problem was not to transmit
a) illegally on SSB or b) in a liddy manner by using CW to call the SSB
DX station running a pileup. I would use self restraint. Neither of
these choices involved consulting you for advice.

Now perhaps is the time for you to address the issue of self-restraint
by some French 6m operators by contacting the French PTT or the REF.
I'd think it would be more productive use of your time than to attempt
tackling the issue by accusing the DX station they called of wrong
doing.

I don't believe I do. Why, did the French guy write a portion of Part
97?

> And your argument
> is that you don't believe the French ham who came on here and gave
> French 6M band limits because you didn't know him.

I don't know him and didn't see his posting. I only have some stuff
which you posted and which you claim came from a French ham. I don't
even know that he knows what he's talking about. What weight should his
post here carry with me? Was he with the REF or French PTT?

> Dave, again, if someone made you aware that you were working foreign
> hams which were operating out of band, would you keep making contacts > with them,
knowing even though you were within your band limits, that > they were illegal?

I still don't know for a fact whether the French or any other station I
worked on 6m except for the two Americans I qso'd from Tanzania were
within their authorizations. I don't have copies of of the
authorizations for all countries and if I did, I wouldn't bother
consulting the authorization tables before replying. I can only be
responsible for the operation of my station. It is entirely up to the
other station how he operates his equipment. My presence on a frequency
I am permitted to use cannot be used as an excuse for the illegal
operation by another. I don't operate my equipment outside my
authorized allocation. Again, since your issue is the illegal 6m

operation of French hams, you need to address this issue to the French PTT or the REF. Have you yet done so?

Bootleggers are unlicensed station, Brian. Come to think of it, I'd
stay off the bands if I were you since I'm now making you aware of the
fact that any station you QSO could be an unlicensed individual using a
made up callsign or "borrowing" the callsign of another. You can't be
too careful.
>
> When a Novice that you personally know comes up on a non-220mhz linked 2M

heh heh...you have to ask? :-)

It should be obvious. They are pre-restructuring extras, therefore they
are GODS OF RADIO. No mere mortals can approach their
magnificence nor outshine their heavenly lights. They have told us
that in thousands of messages. :-) :-) :-) :-)

"Cronyism" isn't cronyism if practiced by two cronies. This extends to Extras, especially. :-)

If one crony exhibits personal discomfort via being pierced by ordinary news-group barbs (deserved) and being deflated, then the other crony must come to the rescue. Maybe it is a "pack thing" for survival? :-)

>Is that all 22 years of "Ham Radio" is worth? It was considered the best
>technical amateur radio rag going.

A critical analysis of the ham radio publications of the 60s to the
start of the 90s might turn up that it was THE best technical
ham periodical at the time. Jim Fisk, the first editor in chief, set
the tone and content, could be both editor and writer of
excellence. His call, W1HR, is now a memorial station call.

What was surprising to some of the staff was the number of
non-amateur-radio manuscripts submitted for consideration.
Good quality work. Some of the foreign authors had very good
command of the English language in writing. The subjects were,
unfortunately, too out of the "traditional" ham radio "technical
field" to maintain the magazine's demographics after Jim Fisk
died...at least according to the publisher and following editors.

"HR" was not into the "traditional" reprints of MOPA transmitters,
regenerative wonder receivers, or the usual boat-anchor tube
stuff (or modifications of same) and did not HAVE to include some

CW (morse code keying) capability in every article concerning transmitters. :-)

The professionals in RF thought highly of the magazine, at least from the readers' responses. It did not "talk down" to the old-timers nor did it keep myths and legends alive nor did it praise itself unduly like another periodical that is a membership magazine. "HR" simply explained theory involved in an article, how the reader could make it work if a construction piece, or how a tutorial applied to practical applications. It wasn't for the dilletante or dabbler, but rather aimed at those who didn't mind rolling up their sleeves and doing some skull sweat to truly experiment-build-try-out radio stuff in old, new, or innovative ways.

That's rather gone by the boards in the US ham radio periodical field where that field was turning into a "race for subscribers" and a competitiveness-among-publishers for a shrinking advertising income. That got to the point of some kind of elitism and snobbery among the publishers where demographics was everything and the technically-oriented amateur be damned.

No matter...the majority in amateur radio now use manufactured equipment of high quality in performance, fairly reliable equipment enabled through nearly the latest in solid-state and ASICs. They would rather take the lower road in arguing logos and trademarks than bother getting into any part of the technology...and doing the bluff-poker game of saying "my brand can beat up your brand" in meaningless little braggadoccio-laced "technical" arguments. :-)

>CDs are just a way of reprinting old information. Nothing new is presented.
>The magazine called 'Ham Radio' is defunct, just like Atwater Kent is defunct,
>even if reproduction radio sets are made with that name on them.

Let's cut to the chase. You are using "defunct" as a left-handed insult because you are highly irritated at non-hams' participation in the content of a respected 22-year-publication-history technically oriented amateur radio periodical. So is Superman Dave and Sgt Putz, all three of you wanting to be insulting...you all succeed in that but carry the insults far beyond a few participants in here.

Your insults apply to a large number of US radio amateurs (as well as some foreign radio amateurs) who made "HR" a leading ham technical periodical. I don't understand why you wish to insult a large number of hams, most of which were in the hobby as long or longer than yourself.

Are you so petty that you desire to insult a whole group of technically-competent radio amateurs just to "get" one person in this newsgroup?

Theory, tutorials, construction articles on radio-electronics basics as applied to amateur radio seldom get "old." Or are you suddenly "into" logo and brand-name-ID snobbery where the "latest" thing is the "best?" If so, why do you tout vacuum tube circuitry as superior...especially in self-description of "superiority" as a ham in "designing and building your own transmitter-receiver (using tubes)?"

>The 4th edition of the 'Radiotron Designer's Handbook' is also available on
>CD.

That's nice. It's editor was an Australian and worked for an Australian RCA Corporation. Is "RCA" defunct? I can still find "RCA" brands in today's marketplace. In consumer electronics the "RCA" brand is still there although that has been acquired by Thomson from General Electric.

The old RCA Corporation was sold entire, first to General Electric, then parts of it to other corporations. Did such selling make it "defunct?" The word "defunct" is defined as meaning "dead or extinct." I don't see the "RCA" brand as either extinct or dead.

Communications Technology, Inc., sold Ham Radio Magazine to CQ along with its Ham Radio Bookstore. Does that selling make Ham Radio "dead or extinct?" All 22 years of HR are collected

on three CDs and for sale by CQ and the ARRL. Article lists of
HR articles are found on two separate Internet sites.

The "Radiotron Designer's Handbook" doesn't have any design
data for transistors or integrated circuits. It is oriented towards
vacuum tube design; the "Radiotron" is/was an old RCA trade-
mark for vacuum tubes. By contrast, there are dozens of
articles in the HR history that include transistors and ICs, most
of which are still on the market. A general-purpose NPN
transistor with transition frequency of 150 MHz can be purchased
from hundreds of retail outlets for a quarter...a triode vacuum tube
to do the same circuit task typically costs $5 and available only
from a limited and shrinking retail outlet group.

>>Hardly defunct when it still sells ($150 for
>>the three-CD set, shipping charges extra if ordered by mail from
>>ARRL, no shipping charges if bought through a retail ham outlet).
>
>Sales tax often applies.

Oh, my, a REACH for an "argument!" :-)

California sales tax is 8.5% (give or take). Other states vary.

ARRL publication prices are the same from surface mail or e-mail
as in retail outlets. If shipping charges are required extra cost to
a mail order then that is approximately equal or slightly more than
local state sales tax. But, a retail ARRL publication outlet has to
make a profit to stay in business, so it obtains ARRL publications
at a reduced rate...or did you think the retail outlet sells without
profit out of the goodness of their hearts?!? :-)

Shipping charges on a $25 ARRL publication can reach $5. That's
a 20 percent extra charge over the retail store price. I don't know
of any US state that charges 20 percent sales tax. Do you? :-)

You may argue that "it takes fuel to drive to a retail store to buy
something" but the dollar amounts don't achieve a successful
argument. [in my case there's an HRO across the street from the
supermarket we frequent, taking hardly a dime's worth of extra
gasoline to cross...:-)]

You may argue that "retail ham stores aren't found everywhere"
and you would be right. However, the standard book retail outlet
list prices are DOUBLE that of what the outlet pays publishers.
That hundred-percent markup has been standard since before
WW2. That also explains how Amazon and Crown Books (along
with Barnes & Noble, Borders, etc.) can "slash" retail prices and
still stay in business..."while passing along 'savings' to buyers."

I don't know what the bulk-sell or quantity charges are on ARRL
publications. They MUST be lower than stated retail prices or
very, Very, VERY few retailers would "resell" at zero profit. So,

how come for why the ARRL cannot do a "service" to mail-order
buyers and drop the shipping-and-handling charges? :-)

>Nonsense. Your attitude towards amateur radio and radio amateurs has been
>made quite clear here over the years.

Oh, my, Miccolis "represents" amateur radio and equates himself and his
personal desires and beliefs as that held by the ENTIRETY of amateur
radio?!?!?

No, you poor aggrieved soul, I don't "hate" amateur radio. I dislike (not
hate) INDIVIDUALS within amateur radio who think they "speak for all."

Jimmie Miccolis is NOT the ENTIRETY of amateur radio, not even of
US amateur radio. His personal desires and beliefs are NOT SHARED

by everyone so he should quit putting on his "noble cloak" as if he did represent them all. Jimmie Miccolis is an individual, an ordinary mortal, possessed of no god-hood, nor of any authority to speak for all. All he can do is speak for himself.

>>I've said it a long time ago, have repeated it many times, including several
>>times in here: Amateur radio is a fine hobby involving radio.
>
>You've said it a few times in here - in between mountains of words condemning
>virtually everyhting in ham radio.
>>
>>Now let's be fair about it.
>
>HAW! That's a GOOD one!

I'm trying to be fair, but Miccolis seems to think His desires and beliefs are the "same" as two-thirds of a million other hobbyists. He is not.

Miccolis charges that I "condemn virtually everyhting [sic] in ham radio."

His egocentrism leads him to equate "virtually everthing" with his own personal desires and beliefs. There can be no rational discussion with those who are so egocentric...thus "fairness" doesn't exist...

>>There are a number of radio amateurs in
>>here who have a very one-sided, personally-biased viewpoint along
>>with a too-strong identification of themselves and their experiences
>>and their personal desires who insist that "all" amateur radio is
>>exactly as they are/do/experience.
>
>There are? Who?

James Miccolis for one such.

>While we're at it, consider non-radio amateurs in here who have a very
>one-sided, personally-biased viewpoint along with a too-strong identification
>of themselves and their experiences and their personal desires who insist
>that amateur radio MUST be what they say it is.

I am merely arguing for greater freedom in a hobby involving radio, speaking for myself. That rankles the egos of those who say Their Word is that of a third of a million others. Tough. Hand me your TS card and I will punch it.

Is Jimmie of the divinity? Did he see some "burning bush" equivalent and hear a voice (of a higher authority) saying (loudly and distinctly) "There shall be a morse code test for ever and ever and morsemanship shall be the ultimate skill among amateurs?" If so, he is merely "Herschel" up against some unnamed "Moses" in a satirical comedy on film. :-)

The major issue in amateur radio is still the code test. That's highly polarized, yes, but the belief system supporting continued code testing is all wrapped up in myth, legend, and personal identification with those few who could achieve high-rate morsemanship. Those achieving the

latter become overly, overtly proud of their skill and continue to maintain
that they are superior to others because of that skill, up to and including
any regulation that endorses that skill.

Is amateur radio all about morsemanship? I don't think so. Many others
don't think so, including the FCC.

Is amateur radio all about "keeping traditions of ham radio alive?" I don't
think so. Others don't think so. All of radio is only about 108 years old
and the standards and practices of the 1930s are hardly applicable in
this new millennium. "Tradition" is something for the museums and the
overly-proud, posturing membership organizations...and the lovers
of the past who, not being able to learn the modern, cling desperately
to the past of their youth. Why the youth of now has to be saddled with
the nostalgia emotionalism of the now old or middle-aged is not a good
reason for retention of certain regulations.

>>>>I also think that some involved with amateur radio have gone over the edge
>>>>and proclaimed themselves as THE spokespersons and representatives of
>>>>the hobby, becoming far too involved with the mystique and myths and
>>>>legends that were created long ago.
>
>Like those NCI folks, huh? Imagine!

No, like the ARRL, still trying to hang onto a ham radio of yesterday in
everything, appeasing their old-timer membership base and ignoring or
talking down others.

>>I am for the elimination of the morse code test for ANY
>>radio license.
>
>So is K2UNK - but he gets his points across without uncivil behavior or
>insults. He does more to promote the NCTA cause in a single post than you
>have done in all the years you've been posting here.

Poor baby. If you can't take confrontation, best you shut off your
computer or quit trying to access this newsgroup.

I'm not Bill Sohl nor do I always agree with his statements, but Bill *IS*
a Director of NCI and No Code International DOES have support from
foreign (to the USA) organizations. NCI has the main goal of abolishing
the morse code test for an amateur radio license. When that main goal
is achieved, NCI has stated that it will dissolve.

Jimmie, you poor soul, you just cannot bear losing that code test nor
the status and title-symbolism representation for your morsemanship.
That seems to be the root cause of your inability to rationally argue
the retention or elimination of the code test. Not my problem.

You want to be confrontational with a superior attitude of "knowing
what is best for amateur radio." That's okay, but you go off the deep
end when confronted with another who doesn't agree with you. You
do NOT "know what is best for amateur radio." I doubt anyone does.

Every hobby evolves and must make transitions from old to new.

You cannot handle strong confrontation. That is clear. That is why I suggest you quit trying to be some "knowing what is best for amateur radio" spokesperson.

>>GETTING INTO amateur radio involves morse code proficiency by a
>>test for any license class having below-30-MHz operating privileges.
>
>Sure. What's the big deal? That test has been whittled down to the most basic
>form imaginable. It will almost certainly disappear next year. That's old
>news.

Only the deeply religious and the fools see the future with "certainty."

The amateur radio license test has NOT been "whittled down to the most basic form imagineable." You want to put on your "I know what is best for amateur radio" cloak and proclaim, not understanding that amateur radio is NOT about morse code or morsemanship.

The US morse code test is NOT gone. S25.5 has NOT been rewritten, will not even be discussed at WRC-03 until next year. Rewriting of S25.5 will NOT automatically delete the morse code test since a Recommendation is NOT US law.

Until there is some sign that US law will be rewritten to eliminate the morse code test, there is NO "certainty" and the code test elimination confrontation WILL continue. Adapt to it. Remember, you are only one hobbyist among hundreds of thousands and you do NOT speak for all. You only know what is best for you, personally, not for anyone else.

>Nope. I simply point out that your uncivil, insulting behavior has earned you
>the same in response.

Poor baby. Failure to honor and glorify your morsemanship, your greatness in amateur radio, and all-around knowing what is best for amateur radio is suddenly a "legitimate" excuse for you own pique? :-)

The "extra double standard" seems alive and kicking. :-)

>So are your uncivil and insulting remarks against anyone who disagrees with
you
>or points out your mistakes. Even if they do so in a civil fashion, you call
>them names, make fun of their jobs, names, etc.

Have I called anyone else "putz" dozens of times? No.

Have I told someone else to "go soak their head" many times? No.

Have I called someone a "blowhard?" No.

PCTA amateur extras have used those "civil-fashion" statements. :-)

Let's have a clarification on definitions here. An opposing view to a personal desire or belief is NOT automatically "uncivil." It is merely an opposing

view.

Confrontation on ISSUES is difficult for the egocentric or the religious with very deeply-held beliefs. That's not my problem, it is theirs. They are neither
God nor Emperor nor do they "know what is best for amateur radio." :-)

I cannot "make fun" of someone's occupation when they don't identify that occupation. You have repeatedly said you will not identify that because you "fear some ridicule from me," yet you condone ridicule of other PCTAs towards any NCTA. Tsk, tsk, double standard again. Hardly "civil." :-)

>>Do you take pride in your "histories" of amateur radio?
>
>There is only one, and it's a history of amateur radio licensing in the USA
>since the end of WW2. Very specialized, but relevant to rrap. You have dissed
>it, but have not proven one fact of it to be incorrect.

I did not honor it or sing hosannahs in the highest at its appearance. Such histories have been done before by real historians. Yours has no footnotes or references. It is therefore subject to doubts of accuracy or from plagiarism.
The Thomas H. White radio histories on the Internet contain referencible footnotes and facts.

>>No, they are not "resistance to an extreme degree," a ridiculous descriptor
>>which tries to magnify an error way beyond proportion. That magnification
>>makes them virtually one of "life and death proportions" in a flame war
>>ignition.
>
>My description is quite accurate.

No. You insist on a flame war even now, can neither take criticsm nor any correction. :-)

As I said before, you cannot handle rational discussion on subjects. You have to resort to personal attacks. That seems to be "very civil" in the double standard of the extras. :-)

> to everything you write or accepting all the trash you say about
> others.

As I said, I've not yet noticed you being civil but I have noted you saying anything you want. Included are pot shots at the ARRL, casual dismissal of the views of long-time licensed hams and those who are pro-code testing, trashing of the contributions of radio amateurs and of their traditions, tales from your military service period and from your civilian employment.

> You are being deliberately antagonistic and confrontive here,
> your own rage vented on another only to satisfy yourself.

Naw, Len--not only to satisfy myself. I do it to counter your anti-ham radio bias and maybe to provide a few laughs at the expense of a condescending windbag who isn't even a participant in amateur radio. Ain't I a stinker?

> Try
> approaching a subject some time. Try doing it with an open
> mind rather than reacting with rage against all those "unworthies"

Do they have Loons in California, Len. You addressed the topic as if it had some relevance. Now you're busy trying to convince us that you didn't bring it up. What gives?
>
> >> >It's easy, Len. Did you work for "Ham Radio" in the same sense that

I can mention sex too, Len, without desiring any tales from your
personal exploits (whether money changed hands or not). As much as
you'd like to tie together the topics of work and income disclosure,
your statement doesn't ring true.

I answered the question. You didn't like the answer.

> You've gone off the deep end again in working the spite,
> anger, sarcasm bit very poorly.
>
> You keep wanting to use "defunct" as if it is "extinct" or "dead."

No, "defunct" isn't extinct or dead. "Ham Radio" magazine is extinct or dead.

> You keep wanting to use "defunct" as a thinly-disguised
> personal attack.

No matter how much you'd like for this to be accepted as fact, it isn't true. The fact is: "Ham Radio" magazine is defunct. How you turn this into a personal attack is beyond me.

> All you are, by example, is an ego-driven spiteful person who
> gets their jollies out of harassing and/or insulting those who
> do not agree with him. By continuing your "defunct" attack,
> you've now insulted a number of hams who worked hard to

Poppycock, Len. I've done no such thing. I've pointed out that the magazine no longer exists. It is defunct. I don't know anyone else who considers someone who points this out to be guilty of harassing or insulting. If you feel harassed or insulted, learn to deal with your feelings.

> >> Dictionaries have that definition.

> you've done is screw yourself with your own words.

You've failed to explain how the reproduction of old magazine copies on CD equates with me "screwing myself with my own words.

> >I can even order "Best Radio Diagrams of
> >1938 on CD yet Supreme Publications is defunct too.

>
> 1938-era radio technology may be too advanced for you. Go easy
> on such high-tech information until you get up to speed...say at
> the 1960 level.

...but you don't address the issue that both the copies of the Supreme Publications material and the 22-year run of the defunct "Ham Radio" magazine are simply reproductions of old material. There are no new issues of "Ham Radio" coming off the press.

> >Do any of those
> >issues of Ham Radio on the CD set bear a 2002 date?
>
> Why are you so concerned. Can you understand any tech
> level as advanced as the year 2002?

I'm concerned because you write as though "Ham Radio" magazine is still being published. It isn't. It is defunct.

> >No, you're getting confused again. I don't consider myself to be an
> >absolute marvel. I consider myself to be a radio amateur.
>
> I concede that you are an amateur.

It is about time. Maybe you can play too someday.

> >> Part of amateur radio policy is about GETTING INTO amateur

I was part of the government as a civilian in the military? I suppose I
was not just working as a State Department employee, I was PART of the
government. When I was self-employed, was I part of myself?

> >Man, you ARE confused today! I didn't make any claim toward any of my

> to Guinea-Bisseau and lived there just to be the "only ham in the
> country?!?"

The State Department had no role in my amateur radio activities just as
no employer in the U.S. has had a role in my amateur radio activities.
The State Department didn't order me to Guinea-Bissau, I voluntarily bid
on the assignment. Why? Does it bother you?

>
> >> Not at all. You've never explained why your non-amateur radio

I have no doubt. I just don't think anyone there or here is paying much
attention.

> >You've made no attempt at all to achieve even the simplest entry level
> >license.
>
> There was NO requirement or regulation stating that a license was
> necessary. None is required. Except among those poor souls
> who use their license status-rank-title as some kind of "qualification"
> on knowing it all.

Sure there is, Len. There is a requirement for someone to pass a
license exam in order to be a ham. Remember? This newsgroup deals with
amateur radio.

> >What weight should be given to your views, Len?
>
> I leave that up to the reader.

I wouldn't want to be out on THAT limb.

> Those who are confirmed PCTAs will ignore it and become
> argumentative, confrontive, and abusive...because they have no
> valid argument against the NCTAs.

...or some might get that way after reading enough of your drivel.

> Other readers have varying opinions and are capable of
> independent thought.

Don't worry, Len old boy, you only have to worry about the rational
readers.

> The FCC does not require its staff or commissioners to hold
> amateur radio licenses in order to make regulations about US
> amateur radio. Why do you, not with the FCC, demand
> such adherence to standards which are NOT codified law?

Nope and you don't have to hold a driving license to work for the DMV
either. You aren't with the FCC and you don't make regulations about
U.S. amateur radio.

> The FCC makes decisions about regulations based on US
> citizen input and the logic of that input. Most readers have
> US citizenship and logic capability.

So you'd likely be an exception based upon at least one of the two
criteria?

> I do not demand that they
> share my viewpoints, just that they listen to another's view with
> an open mind. Why do you close your mind and demand
> others adhere to your standards?

Man, your posts certainly don't read like the stuff you've outlined
above. What would be the reason for the discrepancy between what you

> >What of importance have you imparted here?
>
> Irrelevant use of the word "importance."

A matter doesn't lose relevance because of your dismissal.

> This is discussion, debate,
> argument. All readers can agree, disagree, remain indifferent, as
> they choose.

...except when they disagree or dismiss your ideas as crap, they are
chastised by you. You go into your CAPS mode, crank up the "Nazi
machine" or begin using the diminuitive form of their names.

> Readers have that option. They are NOT required
> to adhere rigidly to your specific personal desires or to the
> so-called"traditions" demanded to be followed. Most readers can think > and reason.
Reason and reasonableness is a positive attitude in
> discussion and debate on laws and policies thereof.

So...like when are you going to start with the reason and
reasonableness?

> If anything of "importance has been imparted," it is showing the
> baseness and perfidious attitudes of those long-timers who think
> that all policy should reflect their wishes just because they think
> they are so great. You have demonstrated that attitude in great
> abundance in here. QED.

...as opposed to you having demonstrated that you get your feelings hurt
when someone strongly disagrees with your insulting comments over ham
radio in general, Extra Class licensees, ham radio traditions or the
ARRL? You're a gasbag, Len.

The reality is that the license should mean something - regardless of what testing elements are included in it. If you don't have to put forth any effort, if the license is free, you'll likely end up with something that sounds like 11 meters does today.

73 from Rochester, NY

11m vs. 147.435 in Los Angeles - except for the frequency, what's the
difference? There have been times where that 2m repeater has been worse than
11m.

Thanks a lot for the link Larry.

In looking at the page, I can see that this seems like a worthwhile "club". I might be interested in joining this myself.

I would say that they take themselves a tad more seriously than I would have expected. This isn't necessarily a bad thing, just an observation, nothing that would keep me from joining them.

But in reading this, I had one of those "connections" type moments. Here Larry is (quite rightfully) upset that someone chewed him out for not remembering his 10-10 number. He had a bad experience that has helped shape his whole ham attitude. This is similar to your having had bad experiences with the Morse code test, which has shaped your ham outlook. Different directions of course, but shaped by somewhat similar bad experiences.

I would be very surprised if that happened, at least in the USA. Look at the reductions in written testing that happened with restructuring - fewer tests and fewer total questions for any level of license.

I think that if/when S25.5 goes away, FCC will simply waive Element 1 by executive order.

Resistors aren't the broblem. Its the cable assemblies with 60+ wires and
they run out of colors so they start striping the insulation. My tests
leads for a continuity check don't reach the other end as often as they
should.

Mike, I remember my 10X number as well as passed my code test, @9wpm, with
perfect copy I might add.

> Different directions of course, but shaped by somewhat similar bad
> experiences.

My only bad amateur experiences were with Extras with bad attitudes. Larry allows one bad experience to shape his entire outlook on the phone mode. I am merely wary of Extras who claim their shorts don't stink.

This is such a minor thing to get so defensive about, circle the wagons, organise smear tactic campaigns, etc...

And the answer is so simple, but they cannot let their guard down for a moment. I'm amazed at how dishonest they can be with themselves.

Good grief.

Dave, do try to get over it. You're not rare dx anymore and its unlikely th
at you will have the ability to lure morally corrupt people out of band.
But as long as there are unscrupulous amateurs who encourage bootleggers to
operate out of band by submitting to them the ultimate rare dx courtesy of a
QSL card...

Dave, since you are back in America, I find it unlikely that you'll be able
to lure anyone out of band. Do let me know if you're planning a dxpedition
to some rare land and I"ll be sure to keep my eye on you.

> ...and I didn't accuse you of being a vandal, only of not knowing what
> your mission is.

You said that you expected me to spray paint grafitti on your car. That is being accused of being a vandal. Being a vandal is not my mission.

Dick, you're bringing back memories. Did Al Capp write 'lil Abner? Did SWINE come out before or after 'phoney Joanie' (at which point Joan Biaz - pardon the spelling, I'm not sure of it - sued Al Capp)? The SWINE does sort of resemble the newsgroup at times. Thanks for the momories!

Dave, obviously I cannot override an FCC regulation. Unless I do some
creative reading and interpretation, but that's not within me to do. Its
dishonest.

It's called integrity; not partial integrity, not regulatory integrity.

> > The situation is much like

The people you call scofflaws. French hams on 6M operating out of band are
a "whole class of people."

> > > > > > Then, apparently, you really didn't need him that badly.

> by some French 6m operators by contacting the French PTT or the REF.

What do I have to take up with the French authorities? Its all what you
said, i.e., heresay. Its all in your logs, not mine. You're the only one I
can legitimately discuss it with as it is only what you told me. The only
other part is the French ham who came on here and gave their 6M band limits.

> I'd think it would be more productive use of your time than to attempt
> tackling the issue by accusing the DX station they called of wrong

I think SWINE came first but not by much. Joanie Phoney, Joan Baez, was a bit unfair but a lot of what Capp did was unfair. Poor 'Engine Charlie' Wilson became General Bullmoose, Adlai Stevenson became Failwell Fatchance. Even poor Marlene Dietrich became Apassionata von Climax, how he got that by the censors is still a mystery.

I still remember Cap'n Eddie Ricketyback of Trans-Dogpatch Airways and the mailman's U. S. Mule. And I think Sterling Price was the model for Jubulation T. Cornpone.

Unfortunately, he was a nutcase toward the end.

>should.

They don't have to. There are ways to ring out cables with simple test equipment and some ingenuity.

With two people, such tests are a snap, but they can be done alone also.

For example:

- A cable with an odd number of conductors (all the same color) has been installed and you have to identify and place all the conductors with a minimum number of trips between cable ends. All you have available for test equipment is a continuity tester and some materials to mark the conductors and keep notes. (It can be done in a single round trip).

I have nothing to get over, Brian. I'm not the one filled with the fire
of self-righteous moral indignation.

> You're not rare dx anymore and its unlikely th
> at you will have the ability to lure morally corrupt people out of band.

I see it as peculiar th at you would say th at. I've never noted any
item in the amateur radio regs of any country where I've operated which
mentions "luring" at all. Have you bothered to bring the matter of the
"morally corrupt" French 6m ops to the French PTT or the REF?

> But as long as there are unscrupulous amateurs who encourage > bootleggers to operate out
of band by submitting to them the ultimate > rare dx courtesy of a QSL card...

Which bootleggers, Brian? You've already been corrected several times
on the use of that term. Re the unscrupulous amateurs who encourage
others to transmit by simply operating where they have every right to
be: You're beginning to sound very thick.

Brian:

I guess there's a bit more to it than the 10 - 10 incident. Like 75-meter "roundtables" in which each participant transmits for a solid half-hour at a crack, with or without identifying sometime during the dissertation. Like DX phone pile-ups. Like people running SSB nets with their VFO knobs welded in place on "their" frequency. Like all the QRM caused by those "hams" who are offended by the above. Like being accused of "ethnic cleansing" because I think code testing is a worthwhile requirement for a ham license. Like some 5' 2" 300-lb. YL No-code Tech laying into a lengthy personal attack on my character during an ARRL Forum for merely asking a question regarding the ARRL's resolution to support code testing, without the ARRL "officials" present doing anything to restore order to the proceedings. Like having a repeater shut down on me for mentioning my disagreement with the No-Code Tech license. I could go on and on, but I think you get the picture.

>I am merely wary of Extras who claim their shorts don't stink.

How would you know they were lying, Brian? Did you take a sniff?

>have expected.

Harumph! Just have a QSO with one of them on 10-meters someday, and
conveniently "forget" your steenking 10 - 10 number! THEN tell me how
seriously they take themselves!

>This isn't necessarily a bad thing, just an observation,
>nothing that would keep me from joining them.

Yeah, it's more like something that would make you "un-join" them.

> But in reading this, I had one of those "connections" type moments.
Here
>Larry is (quite rightfully) upset that someone chewed him out for not
>remembering his 10-10 number. He had a bad experience that has helped
>shape his whole ham attitude. This is similar to your having had bad
>experiences with the Morse code test, which has shaped your ham outlook.
>Different directions of course, but shaped by somewhat similar bad
>experiences.

When people have bad experiences with code testing, it's generally
because of poor preparation and/or a self-defeating attitude on their
part. The bad experience I had on 10 - 10 was a simple matter of one
LID stinking up the entire organization he represented. That by itself
probably would only have put me off 10-meter 'phone; however, it was
the cumulative effect of many other bad experiences on the 'phone
bands that caused me to concentrate my efforts on CW and the
digital modes -- much to my personal enjoyment and betterment.

Why is th at, Brian? West Virginia is a rare state on 6m. I'll likely
be operating below 50.200. Why would French ops who are inclined to
transmit below that frequency be less likely to do so if they need my
state for a new one?

Do let me know if you're planning a dxpedition
> to some rare land and I"ll be sure to keep my eye on you.

How many French stations did I work before and after I got the
definitive word from the keyboard of N0IMD, noted expert on French
amateur radio regulatory matters? Why is the matter of such interest to
you in light of the fact that you aren't Tanzanian and aren't French?
Which Tanzanian amateur reg did I break by working French stations?
Could it be French regs which were broken by French radio amateurs?

Finally, have you contacted the French PTT or the REF about this matter
of concern for you?

I'll be happy to do so about the time when you respond to whether or not
you've contacted the French authorities instead of repeatedly ignoring
my question.

They are? Just how many do you surmise makes up this merry band.
You'll need information like this when you take the matter up with the
French authorities.

Let me think...ummm, uhhh--Oh Yeah! Because you are the only person on
the planet worried about my 6m QSOs with French amateurs.

> Its all what you said, i.e., heresay. Its all in your logs, not mine.

What are my Tanzanian logs to you? Why are you worried about someone
else's logs?

> You're the only one I
> can legitimately discuss it with
> as it is only what you told me.

I've told you that I broke no Tanzanian regs and that the French ops who
called me below 50.200 broke French regs. Have you taken the matter up
with them? Noooooooo. Have you taken the matter up with the French PTT?
Noooooooo. Have you taken the matter up with the REF? Noooooo. I'm
starting to see a pattern here.

> The only other part is the French ham who came on here and gave their > 6M band limits.

Have you taken the matter up with him? Nooooooooo.

> > I'd think it would be more productive use of your time than to attempt

> It takes two to tango.

If I'm a clerk in a 7-11 at half past two in the morning (thus guilty of
luring a robber into the store) and he robs the place--am I guilty of
robbing the store? Does being where I'm supposed to be have me doing
the tango with a robber? Does any of this have anything to do with you?

The ARRL is a political organization, an entity which can, like
other US political organizations, have its pots shot at. Live with
it.

I will UN-casually dismiss the views of long-time licensed hams if
such views are elitist, dictatorial, grounded in personal belief and
desires, and do not appear to be encouraging of newcomers.
Long-timers do NOT have some "squatters rights" to viewpoints
and a hobby is NOT a professional organization where tenure or
seniority is superior. Live with that.

Most of your objections listed are simply personal dissatisfaction
at not having your noble, godlike viewpoints shared. Try to live
with that. Opposition to nobility will continue.

>> on knowing it all.
>
>Sure there is, Len. There is a requirement for someone to pass a
>license exam in order to be a ham. Remember? This newsgroup deals with
>amateur radio.

OK, understood. You consider your license status-rank-title is some
kind of "qualification" on knowing it all...therefore you also wish to
stifle any talk, discussion, debate on different regulations that may
threaten your license status-rank-title.

>> >What weight should be given to your views, Len?
>>
>> I leave that up to the reader.
>
>I wouldn't want to be out on THAT limb.

True...you aren't on any limb but rather sitting out in the air like
some cartoon character. Unfortunately for those cartoon
characters, they wind up falling once they realize they aren't
sitting on anything. :-)

I leave my comments to the various readers in here. I have no
problem with that. You have a great deal of trouble with that.
Tsk, tsk.

>> Other readers have varying opinions and are capable of
>> independent thought.
>
>Don't worry, Len old boy, you only have to worry about the rational

What ARE you talking about Herr Robust?!? Have you read the
US Constitution with any understanding?

What part of "US citizens can petition the government..." do you
not understand?

>> I do not demand that they
>> share my viewpoints, just that they listen to another's view with
>> an open mind. Why do you close your mind and demand
>> others adhere to your standards?
>
>Man, your posts certainly don't read like the stuff you've outlined
>above. What would be the reason for the discrepancy between what you
>espouse and what you actually post?

There is NO "discrepancy." I simply give my viewpoints. I do not
DEMAND licensing as a criteria for anyone giving their viewpoints.

You, on the other hand, DEMAND licensing in order to discuss.

You do NOT allow others to give their viewpoints without trying to
give them a hard time for not meeting your criteria on said view-
points.

Poor baby. Newsgroup discussion is obviously not for you. Try
deselecting this newsgroup and do something useful instead of
dictating to everyone who doesn't agree with your views.

>You may now begin accusing me of beating up little old piranhas.

No...even though you would assault your own kind...

>subparts, all of which arecbategorized under "citizens band".
>47CFR95.401 refers.

This is stated that way for a very arcane reason - Sect. 307(e) of the Comm Act gives the Commission authority to issue "blanket authorization" (i.e. authority to operate a station without individual licenses) to the "citizen band radio services" and gives the Commission authority to define by rule what that phrase means.

This was done in the 1980s when the only "citizen band radio services" were the Remote Control (R/C) Service and the Citizens Band (CB) Radio Service provided for in Subparts C and D -- the only Part 95 services operating in the confines of the 27 MHz "citizens band".

Along comes the FRS followed by other alphabet-soup Part 95 services which the Vommission wanted to make license-free nut there was a hitch - the Comm Act permotted that for "citizen band radio services".

What to do?

Why, the easy way is to define those alphabet-soup services as "citizen band radio services". A "cat" is a "dog" whern the "dog-catcher" has to catch it.....

This was discussed in a footnote to the Report and Order establishing the FRS.

I can think of several ways to do this properly but it would literally take an Act of Congress to change the wording of the Comm Act.

The Comm Act is not easy to change for just wording reasons. Section 4(f)(3) is the classic example - it refers to the Field Engineering and Monitoring Bureau which hasn't existed since 1965, to Engineer in Charge and Radio Engineers, positions which haven't existsed since 1996 and 1973 respectively, to an activity which was privatized in 1996, and is worded to consider Saturday as a "weekday" which hasn't been the case in Federal employment practice since about WW-II.

Yet, the action authorized by that statute (special overtine compensation of ship safety inspectors at field offices and reinursement of same by the shipoeners) continued to be valid despite the name changes until the inspections were privatized and survived

many audits by the General Accounting Office, The Congress' squad of hatchet-men.

So much for Literalness.

It's so difficult to hire competent "help" nowadays.....

What's really interesting about this is the fact that you "didn't have
time" to practice code but you had all sorts of time to inform yourself
of band allocations in foreign lands. What is much less certain is that
you know what you'r talking about.
I would have ignored you, too. What's it to you what French hams do?
Since when are you the International Radio Police?

I worked there when that happened. Rape and pillage is a more
accurate description. "RCA" went from a real company to a rather
meaningless trademark. Kinda like "The Fisher" used to be a
manufacturer of high end hifi sets, now it's a trademark of some
asian trash consumer products.

So all the guys running SSB on 40 meters aren't really HAM's??

BTW, I'm a General Class, worked up from Novice w/ 5wpm... :-)

Just my $.02

>A critical analysis of the ham radio publications of the 60s to the
>start of the 90s might turn up that it was THE best technical
>ham periodical at the time.

The topic was not that it wasn't a good magazine, the topic is that is it
now DEFUNCT. It was and it is.

>What was surprising to some of the staff was the number of
>non-amateur-radio manuscripts submitted for consideration.

Nothing there is surprising. It was a good magazine, and it is now
DEFUNCT.

>"HR" was not into the "traditional" reprints of MOPA transmitters...(SNIP)

No, it was not. And now it is DEFUNCT.

>The professionals in RF thought highly of the magazine, at least
>from the readers' responses.

Obviously they didn't think so highly of it as to help keep it afloat, as
it is now DEFUNCT.

>That's rather gone by the boards in the US ham radio periodical
>field where that field was turning into a "race for subscribers" and
>a competitiveness-among-publishers for a shrinking advertising
>income.

It's too bad that ANY focused-subject magazine can't stay in business soley
on it's technical merits or it's editorial staff enthusiasm. If it could, it
might not now be DEFUNCT.

>No matter...the majority in amateur radio now use manufactured
>equipment of high quality in performance, fairly reliable equipment
>enabled through nearly the latest in solid-state and ASICs.

Yes, they are...But in time those radios too will be DEFUNCT.

Lennie-to-English translation: Unless you agree with me, thre can be no discussion.

>I've never argued that "Farnsworth spacing" is "different" from "morse
>code" (International Morse Code).

Oooooh...L E N N I E ! ! ! ! ! Liar Liar Pants On Fire!

>Let's cut to the chase. You are using "defunct" as a left-handed
>insult because you are highly irritated at non-hams' participation
>in the content of a respected 22-year-publication-history technically
>oriented amateur radio periodical.

No, we are simply pointing out that you continue to harrangue Amateurs about allegedly rying to cling to "legacy modes" and practices established in the 30's, all-the-while clinging to your less than stellar "writing" career in a failed magazine and 1950's era rear area Army communications posts.

It's one of your "double standards" that you accuse OTHERS of doing.....

> So is Superman Dave and Sgt
>Putz, all three of you wanting to be insulting...you all succeed in
>that but carry the insults far beyond a few participants in here.

The "insult", Lennie, is the one you heap on the memories of REAL Amateurs like Jim Fisk...On the one hand you take every single opportunity to denigrate ANYTHING Amateur, then you run back to your "career" with The Late Mr. Fisk as if it makes your conduct "OK".

It doesn't.

Also, your frequent references to "friends" who happen to be Amateurs...You remind me of the bigot who freely refers to persons of African heritage with the "N" word, but then points out how some of his best friends are of that same heritage.

That you have acquaintences that are licensees inthe Amateur Radio service do NOT make it alright.

>Your insults apply to a large number of US radio amateurs (as well
>as some foreign radio amateurs) who made "HR" a leading ham
>technical periodical

It can't be TOO large, Lennie...the magazine is now DEFUNCT.

>I don't understand why you wish to insult a
>large number of hams, most of which were in the hobby as long or
>longer than yourself.

I know a 12 year old that's been in Amateur Radio longer than you have,
Lennie...What does THAT mean?

>Are you so petty that you desire to insult a whole group of
>technically-competent radio amateurs just to "get" one person
>in this newsgroup?

Nice try, Artful Dodger...NOW you are hiding behind some undefined "silent
majority" so as to try and deflect any further criticism of your own
misdeeds...Just like you tried to gain some Rear Area Widget war hero points by
trying to associate your self with soldiers who died in combat 3 years before
you arrived in that rear area...Not only the actions of a PUTZ, but a COWARDLY
PUTZ.

>Is "RCA" defunct?

Nope...But "Ham Radio" magazine is.

>Communications Technology, Inc., sold Ham Radio Magazine to
>CQ along with its Ham Radio Bookstore. Does that selling make
>Ham Radio "dead or extinct?"

Yes. CTI is only offering COPIES of a magazine that is no longer in
publication. "Ham Radio" magazine is not selling them...CTI is.

>All 22 years of HR are collected
>on three CDs and for sale by CQ and the ARRL. Article lists of
>HR articles are found on two separate Internet sites.

Copies...Just copies.

>>Nonsense. Your attitude towards amateur radio and radio amateurs has been
>>made quite clear here over the years.
>
>Oh, my, Miccolis "represents" amateur radio and equates himself and his
>personal desires and beliefs as that held by the ENTIRETY of amateur
>radio?!?!?!?

He didn't say that.

Try again, Your Putziness.

>No, you poor aggrieved soul, I don't "hate" amateur radio. I dislike (not
>hate) INDIVIDUALS within amateur radio who think they "speak for all."

Your actions do not reflect your words. You DO hate Amateur Radio. If
you didn't, we'd see you in the FCC database.

>Jimmie Miccolis is NOT the ENTIRETY of amateur radio, not even of
>US amateur radio.

He didn't say he was. Please provide the quote from N2EY that
substantiates your claim, Oh Factless One.

>I'm trying to be fair, but Miccolis seems to think His desires and beliefs
>are
>the "same" as two-thirds of a million other hobbyists. He is not.

No. Lennie...You are anyhting BUT "fair". You are incapable of it.

>Miccolis charges that I "condemn virtually everyhting [sic] in ham radio."

You do. It's archived right here. From VE's to operating events, to
emergency services to civil defense. NO ASPECT of Amateur Radio has escaped
your spiteful rants.

>There can be no rational discussion with
>those who are so egocentric...thus "fairness" doesn't exist...

For once we agree. And for diametrically opposed reasons.

>Hand me your TS card and I will punch it.

How about if I hand you mine but punch you instead?

>The major issue in amateur radio is still the code test.

No, it's not. PRB-1 and spectrum protection are the leading issues of interests to most Amateurs, Lennie. If you were active in some forum OTHER than rrap you might know this.

I am sure it is the "major issue" to you, but that's because you are ignorant of the world outside your own imagination, Lennie.

Sucks to be you, I guess.......

>Is amateur radio all about morsemanship? I don't think so.

Obviously, you do...otherwise you'd have a license and spend more quality time on the air instead of wasting countless hours trying to fake people into believeing that you are really a person instead of a spiteful troll.

>All of radio is only about 108 years old
>and the standards and practices of the 1930s are hardly applicable in
>this new millennium.

Nor are "achivements" accomplished in a rear area Army radio facility in the 1950's...But you feel it neessary to keep telling us that you did it...It's meaningless and tiring. Too bad you don't have any CONTEMPORARY tales to tell, Lennie.

Again...SUCKS to be you.

>"Tradition" is something for the museums and the
>overly-proud, posturing membership organizations...and the lovers
>of the past who, not being able to learn the modern, cling desperately
>to the past of their youth.

.....As told by Sgt Lennie H Anderson, U. S. Army, 1950-something to 1950-something else...Again.....

>Why the youth of now has to be saddled with
>the nostalgia emotionalism of the now old or middle-aged is not a good
>reason for retention of certain regulations.

Nor is it sufficent reason to flog people with tales of your hero By Association tour-of-duty in 1950's Japan, Lennie.

>No, like the ARRL, still trying to hang onto a ham radio of yesterday in
>everything, appeasing their old-timer membership base and ignoring or
>talking down others.

Sheesh! What rediculous tripe!

>If you can't take confrontation, best you shut off your
>computer or quit trying to access this newsgroup.

A bit of your own advice you should heed next time you go off on another one of your "...he tried to deny me my rights" rants, Lennie.

>Jimmie, you poor soul, you just cannot bear losing that code test nor
>the status and title-symbolism representation for your morsemanship.

We will lose nothing, Lennie. When the test is laid to rest, we will still be licensed Amateurs...the only difference is that we will be able to do something you can't...and that above all just eats you up at night.

>That's okay, but you go off the deep
>end when confronted with another who doesn't agree with you.

He's disagreed with a lot of folks, sometimes vigorously. YOU are the only one who tries to belittle him for it. Probably becaue YOU can't accept that YOUR opinon is not held as sancrosanct by others as by you.

STILL sucks to be you.....

>You cannot handle strong confrontation. That is clear.

Hope you had your helmet on when you launched THAT one, Lennie, because it landed pretty close to home!

>That is why I
>suggest you quit trying to be some "knowing what is best for amateur
>radio" spokesperson.

He never has.

>The US morse code test is NOT gone. S25.5 has NOT been rewritten,
>will not even be discussed at WRC-03 until next year.

Perhaps they should discuss it at WRC-03 in 2005?

>Until there is some sign that US law will be rewritten to eliminate the
>morse code test, there is NO "certainty" and the code test elimination
>confrontation WILL continue.

I am sure you are right, Don Quixote. Head right on over that way (a few miles west of you)...You can tilt at all those steel windmills on the coast. I am sure "Big Oil" will have a good time watching the old man joust with the windmills.

>The "extra double standard" seems alive and kicking.

Is that anyhting like the "EE double standard"...???

> Have I called anyone else "putz" dozens of times? No.

Sure...At LEAST that many times this week alone!

>Have I told someone else to "go soak their head" many times? No.

Liar, liar pant's on fire, Lennie! Done it to me many MANY times!

>Have I called someone a "blowhard?" No.

Well...I guess you had to give yourself at least ONE "out"....

>Let's have a clarification on definitions here. An opposing view to a
>personal
>desire or belief is NOT automatically "uncivil." It is merely an opposing

>view.

Well gee whiz, Lennie-poo! If you'd taken some of your own advice we wouldn't have all this ugliness, now would we...?!?!

I love it how you get your own spitefullness fed back to you, and now you suggest flks "play pretty".

>I cannot "make fun" of someone's occupation when they don't identify that
>occupation.

That's right. You can't. And I can't blame Jim for keeping his current employment or employer to himself.

>>My description is quite accurate.
>
>No. You insist on a flame war even now, can neither take criticsm nor any
>correction.

He "insists" on nothing of the like. However YOU offer NOTHING that approaches CONSTRUCTIVE criticism, and your "corrections" are only sleights of hand meant to confuse otherwise uninformed readers. They are rarely if ever correct.

>As I said before, you cannot handle rational discussion on subjects.

Pot/Kettle/Black.

It REALLY sucks to be you, Lennie.

> This is stated that way for a very arcane reason -

The "reason" it is stated that way, Phil, is irrelevant. it's there in black and white, reardles of "what they meant". Citizens are not obligated to try and guess what was in thier minds...Courts only go by what is on paper.

That Herr Anderson insists that there is only one "citizens band" is disproven with only the most superficial of reading of the regulations.

The FCC says there are several subparts to part 95, and that they are ALL "citizens' bands". It's in black and white. Please read it.

>Sect. 307(e) of
> the Comm Act gives the Commission authority to issue "blanket
> authorization" (i.e. authority to operate a station without
> individual licenses) to the "citizen band radio services" and gives
> the Commission authority to define by rule what that phrase means.

Your point? GMRS is not "licenseless", yet is under Part 95 and is CLEARLY identified in 47CFR95.401 as one of several "services" within the "citizens band radio services".

>This was done in the 1980s when the only "citizen band radio
> services" were the Remote Control (R/C) Service and the Citizens Band
> (CB) Radio Service provided for in Subparts C and D -- the only Part
> 95 services operating in the confines of the 27 MHz "citizens band".

GMRS was a part of those regulations even then, Phil. Still don't see your point.

>Why, the easy way is to define those alphabet-soup services as
> "citizen band radio services". A "cat" is a "dog" whern the
> "dog-catcher" has to catch it.....

Huh?

> It's so difficult to hire competent "help" nowadays..

Can't be any worse than the "help" that they used to have. Espeically the one's who threw thier hands up in the air over the monster THEY created...(and then enacted prohibitions on radio accessories for Amateurs due to abuses by NON Amateurs...go figure...)

Oh well...Guess what was once old is now new again.

>government.
>
Phil Kane explained the special status of the FCC here some time back. Search for a post by him mentioning the Congress, White House, and executive branch.

The reference to "executive order", above, simply means that I think the FCC will just drop code testing ASAP after S25.5 goes away. No NPRM, no comments, no big deal. FCC has already said they see "no regulatory purpose" to code testing other than compliance with S25.5, and they've reduced code testing to the absolute minimum that will reasonably comply. It is logical to conclude that when S25.5 goes, FCC will refer to their earlier pronouncements and say there is "no regulatory purpose" at all, and just drop Element 1.

Is that clear?

73 de Jim, N2EY

> The ARRL is a political organization, an entity which can, like
> other US political organizations, have its pots shot at. Live with
> it.

...but you've told us on numerous occasions that you aren't anti-ARRL.
For one who isn't anti-ARRL, you certainly don't miss an opportunity to
take a swipe at the League.

> I will UN-casually dismiss the views of long-time licensed hams if
> such views are elitist, dictatorial, grounded in personal belief and
> desires, and do not appear to be encouraging of newcomers.
> Long-timers do NOT have some "squatters rights" to viewpoints
> and a hobby is NOT a professional organization where tenure or
> seniority is superior. Live with that.

You perceive the views of anyone who points to your being on the outside
as a non-participant or who believes your idea of setting a minimum age
limit for amateur radio licensing is silly, as being elitist,
dictatorial and grounded in personal belief.

> Most of your objections listed are simply personal dissatisfaction
> at not having your noble, godlike viewpoints shared. Try to live
> with that. Opposition to nobility will continue.

You mean compared to your personal dissatisfaction at being considered a non-ham who believes his military and professional credentials of the past entitle him to try molding a radio service of which he has never been a part?

> >> You are being deliberately antagonistic and confrontive here,

>
> Your answers are intellectually defunct.

So if I didn't answer the question, I'm to be considered intellectually defunct and if I did answer the question, my answers are intellectually defunct. And all of this judgement comes from a fellow who can't accept that a magazine he once did some work for is belly up?

> >...but you don't address the issue that both the copies of the Supreme

> much?

I actually bid on every assignment except for my first posting. Were you
of the impression that State Department employees bid on assignments
based on food delicacies available?

> Or did you go there to be the ONLY ham in Guinea-Bisseau?
> [I'll bet that's it...it fits your personality...:-)]

Might be, Len. It could also have to do with the fact that I received
25% hardship pay and 12.5% standby pay during those years. Being in an
exotic spot which most Americans don't have the opportunity to see may
have played a part in it. Any of it sort of takes the wind out of your
sails regarding your initial snipped comment, huh?

> >> >You've had your say with the FCC and you've had more than your say here.

>
> You are paying attention. You are taking the time and trouble to
> reply, criticize, and act the general #$%^!!!. No problem. :-)

Another miscue on your part, Len. You act the general #$%^!!!. I just respond to your stuff. All this time you must have had hopes for converting me to your point of view. What I sad disappointment I must be as a convert.

> >> There was NO requirement or regulation stating that a license was

I've haven't cut off your access to newsgroups, sabotaged your
newsreader or intercepted your mail to the FCC. I've only ridiculed
your views. Most of your posts are ripe for ridicule.

> No "license" is required. No "permission" is required.

No, Len. You only need a license to actually be a radio amateur. We all
undertand that it is perfectly natural for an old fellow out in
California to be obsessed with changing the regs for the amateur radio
service in which he is a total non-participant. That makes a lot of
sense.

> >> The FCC makes decisions about regulations based on US

> >espouse and what you actually post?
>
> There is NO "discrepancy." I simply give my viewpoints. I do not
> DEMAND licensing as a criteria for anyone giving their viewpoints.

Oh...that part. What about the sniping you do? the use of diminuitives
or cutesy names? What is that stuff?

> You, on the other hand, DEMAND licensing in order to discuss.

I don't demand that you become licensed, Len. I delight in pointing out
that you are not licensed despite a decades-long interest in amateur
radio, despite your comments about obtaining an "Extra out of the box".
The FCC officials who administer amateur radio are very familiar with
it. That is their job. You, on the other hand, aren't very familiar
with it but you seek to change it by removing the morse test for HF
access and by instituting a minimum age for participation. I find that
absurd.

> You do NOT allow others to give their viewpoints without trying to
> give them a hard time for not meeting your criteria on said view-
> points.

That's the American way, Len. Even politicians can be laughed at,
ridiculed or scorned. It is not mandated that your comments be accepted
or embraced.

> Poor baby. Newsgroup discussion is obviously not for you. Try
> deselecting this newsgroup and do something useful instead of
> dictating to everyone who doesn't agree with your views.

Why should I leave an amateur radio newsgroup? I'm a radio amateur.

> >You may now begin accusing me of beating up little old piranhas.
>
> No...even though you would assault your own kind...

You aren't my kind.

I'm color blind. Well, not 'blind', I have what's called a 'red-green'
deficiency. I think it's the most common form of what people refer to
as 'color blindness'.

On the Ishihara color test, I can't see some numbers, and on other plates
I see DIFFERENT numbers.

It turns out that additive colors (light) are not near as much a problem as
subtractive (paints as on an object) colors.

It's not too bad, really. Although it's enough to bar me from any
electronics work in the Air Force.

Yes, resistor codes are a pain, although if I look under a magnifying glass
with a bright light I can usually figure it out. I mean, there ARE certain
common combinations.

You can imagine what building my K2 was like! Actually, not too bad,
as for MOST of the kit the resistors were on a sequential tape for the
construction order. And I checked EVERY ONE with my digital meter
before I soldered it in.

Mike

> with his own
>personal desires and beliefs. There can be no rational discussion with
>those who are so egocentric...thus "fairness" doesn't exist...

You are being deliberately antagonistic and confrontive here, your own rage vented on another only to satisfy yourself. Try approaching a subject in a civil manner some time. Try doing it with an open mind rather than reacting with rage against all those "PCTAs", "one by twos", "extras" who do not believe in you and who do not blindly accept all your opinions. Try leaving out the personal attacks. Instead, just discuss the subject, and accept that others are going to disagree with you.
>
>>While we're at it, consider non-radio amateurs in here who have a very
>>one-sided, personally-biased viewpoint along with a too-strong
>identification
>>of themselves and their experiences and their personal desires who insist
>>that amateur radio MUST be what they say it is.
>
>I am merely arguing for greater freedom in a hobby involving radio, speaking
>for myself.

"Greater freedom"? How will the imposition of a minimum age requirement result in "greater freedom"?

Radio amateurs, particularly American radio amateurs, probably have greater freedom than any other radio service. We have access to significant amounts of spectrum from MF to microwaves. We can use power levels up to 1500 watts, a wide range of modes, and are not restricted to channels or schedules. We can build equipment of our own design without certification.

And all that is required to obtain this freedom is a license. Said license is earned by passing simple tests.

>The major issue in amateur radio is still the code test.

You do not speak for the entirety of amateur radio. You do not speak for anyone other than yourself.

>That's highly
>polarized, yes, but the belief system supporting continued code testing
>is all wrapped up in myth, legend, and personal identification with those
>few who could achieve high-rate morsemanship.

Incorrect. Ad hominem attack noted.

The code tests for an amateur license have never been "high rate" by any stretch of the imagination, and all testing beyond 5 wpm has been a thing of the past for more than 2 years in the USA.

>Those achieving the
>latter become overly, overtly proud of their skill and continue to maintain
>that they are superior to others because of that skill, up to and including
>any regulation that endorses that skill.

More ad hominem attack noted.
>
>Is amateur radio all about morsemanship? I don't think so. Many others
>don't think so, including the FCC.

I don't think amateur radio is "all about morsemanship". I do know that Morse code is a big part of amateur radio today, despite your hatred of it.

Many others think Morse code is a big part of amateur radio. Live with it.
>
>Is amateur radio all about "keeping traditions of ham radio alive?" I don't
>think so. Others don't think so.

You don't speak for anyone but yourself. Which traditions of ham radio do you want to preserve? How about the tradition of following the rules?

>All of radio is only about 108 years old
>and the standards and practices of the 1930s are hardly applicable in
>this new millennium.

Try speaking clearly. What "standards and practices of the 1930s"? You mean AM, (such as is used by air traffic control), or SSB, or FM?

>>>>>I also think that some involved with amateur radio have gone over the
>edge
>>>>>and proclaimed themselves as THE spokespersons and representatives of
>>>>>the hobby, becoming far too involved with the mystique and myths and
>>>>>legends that were created long ago.
>>
>>Like those NCI folks, huh? Imagine!
>
>No, like the ARRL, still trying to hang onto a ham radio of yesterday in
>everything, appeasing their old-timer membership base and ignoring or
>talking down others.

The ARRL is a membership organization. Its leadership is elected by the membership, to represent their views.

Seems like you want the ARRL leadership to ignore what the members want and instead do what YOU want. Why should the BoD do such a thing?

>>>I am for the elimination of the morse code test for ANY
>>>radio license.
>>
>>So is K2UNK - but he gets his points across without uncivil behavior or
>>insults. He does more to promote the NCTA cause in a single post than you
>>have done in all the years you've been posting here.
>
>Poor baby.

I'm not a baby. You behave like one, though ;-)

>If you can't take confrontation, best you shut off your
>computer or quit trying to access this newsgroup.

Translation: You want me to shut up rather than point out how obnoxious and unnecessary your behavior here can be.

>I'm not Bill Sohl nor do I always agree with his statements, but Bill *IS*
>a Director of NCI and No Code International DOES have support from
>foreign (to the USA) organizations.

So what?

The point is that K2UNK can debate the issue of Morse code testing in a fair, civil and unbiased way, without insulting anyone. No diminutives, no disparaging remarks about people's jobs, age, or ethnicity, military service or technology.

I don't agree with K2UNK on many things. But I respect him, as do many others.

>NCI has the main goal of abolishing
>the morse code test for an amateur radio license. When that main goal
>is achieved, NCI has stated that it will dissolve.

Misdirection noted.
>
>Jimmie, you poor soul, you just cannot bear losing that code test nor
>the status and title-symbolism representation for your morsemanship.

HAW! That's a good one!

It's not even an issue to most hams anymore - including me. Most of the test is gone already.

You are the one who cannot stand to lose the test, because without it your main source of trolling material will disappear.

>That seems to be the root cause of your inability to rationally argue
>the retention or elimination of the code test. Not my problem.

You are being deliberately antagonistic and confrontive here, your own rage vented on another only to satisfy yourself. Try approaching a subject in a civil manner some time. Try doing it with an open mind rather than reacting with rage against all those "PCTAs", "one by twos", "extras" who do not believe in you and who do not blindly accept all your opinions. Try leaving out the personal attacks. Instead, just discuss the subject, and accept that others are going to disagree with you.

>You want to be confrontational with a superior attitude of "knowing
>what is best for amateur radio." That's okay, but you go off the deep
>end when confronted with another who doesn't agree with you.

Describing yourself, again.

>You do NOT "know what is best for amateur radio."

How do YOU know? Have any proof that my approach is not what is best for amateur radio?

I didn't think so.

Anyone who ventures an opinion on what should be done in amateur radio is, by definition, saying that they "know what is best for amateur radio". Live with it.

>I doubt anyone does.

So negative.

>Every hobby evolves and must make transitions from old to new.

There you go again, putting amatuer radio down as a "hobby".
>
>You cannot handle strong confrontation. That is clear.

You are being deliberately antagonistic and confrontive here, your own rage vented on another only to satisfy yourself. That is not "strong confrontation", it's just name-calling. Try approaching a subject in a civil manner some time. Try doing it with an open mind rather than reacting with rage against all those "PCTAs", "one by twos", "extras" who do not believe in you and who do not blindly accept all your opinions. Try leaving out the personal attacks. Instead, just discuss the subject, and accept that others are going to disagree with you.

>That is why I
>suggest you quit trying to be some "knowing what is best for amateur
>radio" spokesperson.

Sounds like you don't have a rational argument, so you pile on the insults, call it "strong confrontation", and then tell me to shut up. Not going to happen.

>>>GETTING INTO amateur radio involves morse code proficiency by a
>>>test for any license class having below-30-MHz operating privileges.
>>
>>Sure. What's the big deal? That test has been whittled down to the most
>>basic
>>form imaginable. It will almost certainly disappear next year. That's old
>>news.
>
>Only the deeply religious and the fools see the future with "certainty."

Nonsense. Anyone who understands the issues can see where things are headed. Do you REALLY think FCC will continue any sort of code test without S25.5? Do you REALLY think S25.5 will last beyond WRC 2003? Get real!
>
>The amateur radio license test has NOT been "whittled down to the most
>basic form imagineable."

I didn't say that. The code test has been whittled down to the most basic form imagineable that has any semblance of compliance with S25.5. Said compliance is the only reason FCC keeps the code test. Them's the facts. Ask K2UNK.

>You want to put on your "I know what is best for
>amateur radio" cloak and proclaim, not understanding that amateur radio
>is NOT about morse code or morsemanship.

"Amateur radio is NOT about morse code or morsemanship"?? Nonsense! What are all those Morse signals doing in the ham bands, then?

Morse code is a big part of today's amateur radio, test or no test. Live with it.
>
>The US morse code test is NOT gone. S25.5 has NOT been rewritten,
>will not even be discussed at WRC-03 until next year. Rewriting of S25.5
>will NOT automatically delete the morse code test since a Recommendation
>is NOT US law.

Extreme Literalism noted.
>
>Until there is some sign that US law will be rewritten to eliminate the
>morse code test, there is NO "certainty" and the code test elimination
>confrontation WILL continue.

The "sign" is obvious in the FCC's R&O. Remember? "No regulatory purpose"?

Pretty clear sign what the FCC thinks.

>Adapt to it. Remember, you are only one
>hobbyist among hundreds of thousands and you do NOT speak for all.
>You only know what is best for you, personally, not for anyone else.

Same goes for you - except you're not even a ham.

>>So are your uncivil and insulting remarks against anyone who disagrees with
>you
>>or points out your mistakes. Even if they do so in a civil fashion, you call
>>them names, make fun of their jobs, names, etc.
>
>Have I called anyone else "putz" dozens of times? No.

Yes - you refer to someone as "Sgt. Putz".

Then there's your use of diminutives of people's names, "Nursie", "Gunny", "Herr" and other obvious childish nonsense. By you.
>
>Have I told someone else to "go soak their head" many times? No.

You've told me to shut up many times.
>
>Have I called someone a "blowhard?" No.

>PCTA amateur extras have used those "civil-fashion" statements. :-)

Is that your standard? Somebody else calls people names, so you have the right to call everyone names?
>
>Let's have a clarification on definitions here. An opposing view to a
>personal
>desire or belief is NOT automatically "uncivil." It is merely an opposing

>God nor Emperor nor do they "know what is best for amateur radio." :-)

You are being deliberately antagonistic and confrontive here, your own rage vented on another only to satisfy yourself. That is not "strong confrontation", it's just name-calling. Try approaching a subject in a civil manner some time. Try doing it with an open mind rather than reacting with rage against all those "PCTAs", "one by twos", "extras" who do not believe in you and who do not blindly accept all your opinions. Try leaving out the personal attacks. Instead, just discuss the subject, and accept that others are going to disagree with you.
>
>I cannot "make fun" of someone's occupation when they don't identify that
>occupation.

That's why I don't make a big deal about it. Your behavior with other people's occupations shows your true colors.

>You have repeatedly said you will not identify that because
>you "fear some ridicule from me,"

No fear. Just a pretty clear idea that no matter what my occupation, you'd make fun of it. Must eat you up inside, not knowing. Live with it.

>yet you condone ridicule of other PCTAs
>towards any NCTA.

Nope. I have no control over what others post.

>>>No, they are not "resistance to an extreme degree," a ridiculous descriptor
>>>which tries to magnify an error way beyond proportion. That magnification
>>>makes them virtually one of "life and death proportions" in a flame war

The FCC has supposedly been trying for the past few years.

Not even the BULLET in the repeater was able to stop it. This is the only
repeater I know of where someone actually tried to shoot it.

I would suggest that is a good practice to follow anyway, on a
complex piece of equipment. Think about a 4 band 1% resistor.
Brown, Red, Black, Brown. If you weren't paying attention it
could be 1k or 12 ohm. A digital meter will confirm which it is.

It is under the House Commerce Committee, His Extortionist Billy Tauzin, Chair. But radio hasn't been under the Commerce Dept since 1927. All of the Commissions with aspects of the Executive, Legislative, and Judicial Branches have been independent since the old Interstate Commerce Commission was established in the 1880's. Some have been better than others: it was said of the ICC that it was good the Overland Stage had bellied by then or the ICC would have preserved it. Ma Bell was behind the Communications Act of 1934 because it got them out from under the ICC. The transport system has come close to recovery from the ICC but there are still places you can't get because the ICC thought you should take a steamboat.

The word Commission is the tip-off.

>go by what is on paper.

Not so - courts give great weight to "legislative history" which explains WHY something gets stated as it is. The "kegislative history" of Commission rules is spelled out in the Reports and Orders, and where there is a conflict the "legislative history" can and usually does trump the "black letter".

If "citizens" (hey - most of us attornies are citizens, too) can't interprt the material properly, s/he can always turn to someone who can. Not everyone can read a medical chart either.

> That Herr Anderson insists that there is only one "citizens band" is
>disproven with only the most superficial of reading of the regulations.

There's only one "citizens band". There are several "citizens band radio services" for the purpose, and only for the purpose, of conforming Sect. 95.401 of the Rules to the standards required by Sect. 307(e) of the Act.

Welcome to the Adminsitrative Law merry-go-round.
>
> The FCC says there are several subparts to part 95, and that
> they are ALL "citizens' bands". It's in black and white. Please read
> it.

Yeah, please read it. It's not "ALL" because it does not include the General Mobile Radio Service (Subpart A) which requires individual licenses, and the Radio Control (R/C) Service (Subpart C) which is exempted from individual licensure by the provisions of Sect. 307(e) of the Act.

>> Sect. 307(e) of

Source record: 48580

Don't ever get discouraged. I failed my general twice in the early 60s. A friend of mine, Tim, WB2KAO, kicked my tail section mentioning that if I could learn grade 1.5 Braille in 2 weeks, I could pass the code test. He promised me that I'd pass if I'd buy a code record (yep, vinyl back then - by Ameco, I believe) and promise to use it 15 minutes every night for a week. At the end of one week, I was up to 18. The general was a snap. Then, I started enjoying CW. I was good for maybe 20 - 25 words per minute when I was on the Rochester Peanut Whistle Net (a cw net) one evening (everyone had to slow down for me as they were good cw ops) and Mike, WA2SEY (now W2AV), the control op, suddenly sped up to around 40 and told Tim (WB2KAO) that smoke was comming out of his rig and Tim had the net. I was amazed. I copied 100%. Int qrq. rrr and the net sped up to around 30. Int qrq. rrr and the net sped up again. I never looked back. I was good for 40. A few years later, whilst in the Navy, I copied 40 words per minute on a typewriter for perhaps 5 minutes with ZERO errors. Once you can get past the 'I can't do it' syndrome, it gets easier. I'm telling you the truth - been there, done that! Not bad for someone who failed 13 words per minute twice. The 5 will come. Just put in 15 minutes per day - no more or you will start hating it. Just 15. Keep at it and let us know how you make out. I'll bet you're ready for anything the amateur licenses require in a week or so!

True, but administrative appeals of some issues still go to the Secretary of Commerce, not to the FCC commissioners. Perhaps some parts of 47 CFR haven't been updated in quite a while! I saw one such reference a couple of years ago and noted it as extremely strange (but I just don't remember where). It may not be fully autonomous!

Bill, you may be one of those rare individuals who have trouble learning code at lower speeds because you are trying to copy both right and left-handed at the same time. If you are more than slightly ambidextrous or if you have a job that requires doing the same thing mirror-image, you can get into the habit of trying to do it both ways and it leads to disaster. Most people have a 'hump' at about 10-11 wpm for a similar reason but I have seen it at lower speeds by a man who worked on railroad car brakes which is a mirror-image activity in that the same operation reverses with the end of the car being worked on.

The tip-off to this is 'inversions': some as to sense, P becomes X, and some as to sequence, F and L notably.

The cure, which I am sure you won't like, is the Koch method. Essentially you learn code at 16 wpm. It actually takes no longer and you are at Journeyman speed when you get done. You should also literally disable the non-writing hand by sitting on it or putting it in your pocket and copy with earphones in the writing-side ear only to convince the brain which side you are using. Longhand on unlined paper BTW.

The real Koch Method uses two letters at a time but I find it better to use A, W, J, 1 as the first group and N, D, B, 6 to work on the inversions right out of the box. And realize that you are going to have to build a mental buffer and avoid 'copying on top' or some combos will sound like a machine gun.

Morse Academy is a real good tool for this approach if it sounds like this is your problem.

Good Luck

Dick N&#65533;BK

Well... so you hang out there, are fami1iar with them, and are
prepared to name them in detail. You've been licensed longer than I and
you have an Extra. Looks like you've made my point. Thanks!

What teacher? Who am I telling it to?

This is an ongoing conversation with one of the perps, Dave. I'm merely going on what Dave has related on the newsgripe, so how could I be wrong? The information is there for all to see.

Dick, pull your head out.

The hell I didn't have time to practice code. I worked on it for months.
That's how I passed the exam. You should pull your head out before you
speak. As tightly as its wedged in, I should hear the "POP" in Columbus.

And there ARE other facets to amateur radio than JUST the code. But your
head is so far up your flux that you don't know it.

> I would have ignored you, too. What's it to you what French hams do?
> Since when are you the International Radio Police?

You can ignore anyone you want. Ignore me, please.

Dave, then you agree

a. to keep talking to bootleggers that you know are out of band, and
b. to keep taking to a Novice on 2M.

So what are you arguing with me about?

> > > > And then question my reputation.

Cecil/Cecilia (reminds me of Victor/Victoria)

My humblest apologies for the misspelling. I should have remembered that - I have two relatives named Cecilia. Then there's the Simon and Garfunkel song....

Loudon Wainwright III (best known for his work on the M*A*S*H TV series and for the song "Dead Skunk In The Middle Of The Road") does a song called "I Wish I Were A Lesbian" (on the "Grown Man" CD). Great stuff.

In the heyday of Morse/CW, guess how fast the code exam was?

Hmmm.

When I insert the continuity voltage on the one side for each of the wires,
then go to the back side to see if I have continuity, the voltage is gone.
I failed that logic test.

What is the solution?

Ditto. During my military physical, after all the really fun stuff, they
sat me in front of the little flip chart and said to name the number I saw
on each card. After the 3rd card, I asked what I was supposed to do again.
After the 5th card I asked if this was some kind of psychology test.

I built the Heath vswr meter and audio filter, a repeater controller, and a
Ten-Tec regen SW. I measured every resistor.

The drill is: Read the posts, then reply. Read the posts, then reply.
You'll get the hang of it before too long.

> So what are you arguing with me about?

So far, I find your search of a mission definition amusing. You've come
up with a problem not involving you or any U.S. radio amateur and for
which you have no firm information. You've thus far accused me of guilt
for the wrong doings of others but you are not concerned enough to

contact the authorities in the country where the wrong doers dwell.
You've accomplished nothing. You've evidently gained no believers in
your case (which is in its third of fourth incarnation) and you've made
yourself look like a boob. I can hardly wait for the next act.

> > > > > And then question my reputation.

It may be a little different. I believe I told you to mind your own
business last year. I broke no amateur radio regulations and operated
my station in accordance with Tanzanian law. What's all of this to you?

Bet you're dying to tell us what you consider the heyday was.
It was the sixties for me. For my pal Ike, it was in the thirties. For
my friend Bert, the heyday was in the fifities.

So did Len but he'll likely snip that part to save face.

I had that problem. Got me into trouble every thing I sent, "good luck".

You are not seeing the capabilities of the tools in your hands, grasshopper.
>
>What is the solution?

It's simple, quick and elegant. Of course none of the "professionals in radio" here will tell it to you (probably because they don't know the solution), so here goes:

Let's say the cable has 7 conductors and is installed north-to-south, and you happen to start at the north end.

Step 1: Lay out (strip the ends and place) and label the 7 wires at the north end. The first 26 wires are labeled A through F, and the last wire is labeled 7. Make sure none of the wires are internally shorted to any other wires (test using short sequence)

Step 2: Connect Wire A to Wire B. Connect Wire C to Wire D. Connect Wire E to Wire F. Wire 7 is left floating. You will have 3 pairs and one loose wire.

Step 3: Go to the south end and lay out all wires. Start checking wire pairs for continuity. Label the wires you find shorted together - Wire 1 is shorted to Wire 2, Wire 3 is shorted to Wire 4, etc. One wire will not be shorted to any other wire - that's Wire 7. Wire 7 is now positively identified and labeled at both ends.

Step 4: Connect Wire 7 to Wire 6. Connect Wire 5 to Wire 4. Connect Wire 3 to Wire 2. Wire 1 is left floating.You will have 3 pairs and one loose wire.

Step 5: Go back to the north end. Undo the connected pairs at the north end but keep their labels in place.

Step 6: Find the wire that is shorted to Wire 7 - this must be Wire 6, because you shorted them at the south end. Relabel it Wire 6, and note its old (letter) name. Wire 6 is now positively identified at both ends.

Step 7: The wire that was previously connected to Wire 6 is obviously Wire 5. Relabel it Wire 5, and note its old (letter) name. Wire 5 is now positively identified at both ends.

Step 8: Find the wire that is shorted to Wire 5 - this must be Wire 4 because you shorted them at the south end. Relabel it Wire 4, and note its old (letter) name. Wire 4 is now positively identified at both ends.

Step 9: The wire that was previously connected to Wire 4 is obviously Wire 3. Relabel it Wire 3, and note its old (letter) name. Wire 3 is now positively identified at both ends.

Step 10: Find the wire that is shorted to Wire 3 - this must be Wire 2 because you shorted them at the south end. Relabel it Wire 2, and note its old (letter) name. Wire 2 is now positively identified at both ends.

Step 11: The wire that was previously connected to Wire 2 is obviously Wire 1. Relabel it Wire 1. Wire 1 is now positively identified at both ends. As a double check, note that Wire 1 is not shorted to any other wire.

This method may be expanded to cables with any odd number of wires by repeating the appropriate steps.

I learned this method of cable wire identification from a Quist Quiz. It's come in handy more than once.

Time to send in some DF gear - and when someone looses their house along with their radio gear, things will quiet down. Problem is, everyone is willing to give a second, third, fourth, and more chances. NAL a few folks and the rest will fall into line.

My point has been if the exam is too easy - or free - folks don't appreciate it. If it costs nothing, one has nothing to loose. How does one tell when one got his extra? I obtained my 1st extra (along with my commercial telegraph and 1st phone and radar endorsement) in 1966. I dropped my tickets around 1981 and decided to get back in the game in 1993. No study (and I hadn't copied CW since 1969 except for the CW that was sent in the movie 'Fantastic Voyage') and I managed to wheeze my way through the whole process in 1993. It has to cost something.

Dave, whatever are you talking about?

I personally didn't have a heyday with the code. Why do you say you did?

If you're going to comment on the rules, get them right. What you volunteered
is incorrect information.

It does make a difference if either the year of issuance or the year in which it
expires is a leap year and someone waits until the "last minute."

How did you know? I've been ambidextrous since 1st grade when I
wanted to write left handed and they made me do it right handed Now
I write just as bad with BOTH hands ;^)

For me it was 20 years as a GM service tech. (Mr Goodwrench) I'm
very used to doing everything 'mirror image' style. I'm also kinda on
the compulsive disorder side as in I have to have every thing symmetrical
or it drives me nuts.

I've been using Morse Academy and it has gotten me this far. At least I've got the 'basic' code learned it's now just a matter of getting up to a usable
speed with no mistakes.

THANKS for the help!!!

I don't know, Brian. I still don't have a table of 6m allocations
published by the REF. How many French stations breaking French regs
would be enough to have you contact their PTT with *your* worries?

I don't see any requirement in Part 97 for a ham license to cost something
and/or not be easy to obtain. The only worth of a ham license is the
privileges granted and those privileges are what someone has to lose.

I've not had any trouble responding to your posts. You've apparently
had some difficulty with mine. You obviously came away with no
understanding of what I wrote since you've gotten it all screwed up.

> You also don't appear to think before
> answering French hams on 6M.

It isn't a mathmatical excercise, Brian.

My scenario:

"5H3US, this is Foxtrot Five Lima India Delta".

"F5LID, 5H3US--five seven, over".

Your scenario:

"N0IMD from Fox Five Lima India Delta".

"The F5 station--standby. I want to be sure that you're operating where
you're supposed to be. You aren't a bootlegger are you?".

You mean the part where I've not broken the regs of Tanzania?

> > What's all of this to you?
>
> Nothing.

It must mean something to you since it is the third or fourth time
you've brought it up and strung it out. I'm available to play for as
long as you like.

I take you at your word. You were miserable with your experience then
and it colors (colours) your thinking now. I say I had a heyday because
I did. I enjoyed my Novice experience and morse code. It was all new
and exciting. I have a log book full of QSOs from my Novice days which
I'm also not going to send you.

In retrospect, I know know where Lennie has been spending those rrap sabaticals...He's stalking Dave's laundry to see which one "sniff's" better.

If he had an Amateur license he could have been on the air, instead.

Why am I not surprised?

Guess I had better use the dryer more often and keep stuff off the line......

It's not drivel.
It's very much a policy issue; whether a CB-style
qualification should be allowed to remain as a
pseudo Ham licence.

>Let's cut to the chase.

Translation: Let's iqnore the facts, such as the fact that the magazine called 'Ham Radio" (actually, they did not capitalize the name on the cover) is defunct, because Lenover21 does not like the word "defunct".

That magazine has ceased to be. Passed on. It has left this mortal publsihing coil. Snuffed it. It is no more.

> You are using "defunct" as a left-handed
>insult

"Left handed insult"? Are you against lefties, too? Sounds like it.

> because you are highly irritated at non-hams' participation
>in the content of a respected 22-year-publication-history technically
>oriented amateur radio periodical.

No insult - just a statement of fact. "Lenover21" has made yet another mistake, projecting is own feeelings of irritation on others. He demonstrates his double standard by showing that it's OK for him to describe things as "old" and "a part of history", but not others. He is insulted by the word "defunct" applied to a magazine that ceased publication years ago, but derides a current publication as a 'high priced fanzine'.

>So is Superman Dave and Sgt
>Putz,

...and thus the typical namecalling by Lenover21.

>all three of you wanting to be insulting...you all succeed in
>that but carry the insults far beyond a few participants in here.

The only people who are insulted by the word "defunct" are those whose egos carry a near-religious connection to the magazine.
>

>Your insults apply to a large number of US radio amateurs (as well
>as some foreign radio amateurs) who made "HR" a leading ham
>technical periodical.

Most of them would agree that the magazine "Ham Radio" is defunct.

> I don't understand why you wish to insult a
>large number of hams, most of which were in the hobby as long or
>longer than yourself.

Where's the insult? I did not say "Ham Radio" was a bad magazine. Just that it
is no longer with us.

I don't understand why you constantly insult a large number of hams, all of
whom have been in the ARS longer than yourself.
>
>Theory, tutorials, construction articles on radio-electronics
>basics as applied to amateur radio seldom get "old."

Really. Then why do you put down certain technologies and methods simply
because of their age?

> Or are
>you suddenly "into" logo and brand-name-ID snobbery where
>the "latest" thing is the "best?"

Not me.

>If so, why do you tout vacuum
>tube circuitry as superior...especially in self-description of
>"superiority" as a ham in "designing and building your own
>transmitter-receiver (using tubes)?"

I don't "tout" anything as superior, nor do I build "transmitter-receivers".
>
>>The 4th edition of the 'Radiotron Designer's Handbook' is also available on
>>CD.
>
>That's nice. It's editor was an Australian and worked for an
>Australian RCA Corporation. Is "RCA" defunct? I can still find

Just a brand name.
>
>The old RCA Corporation was sold entire, first to General Electric,
>then parts of it to other corporations. Did such selling make it
>"defunct?" The word "defunct" is defined as meaning "dead or
>extinct." I don't see the "RCA" brand as either extinct or dead.

It's just a brand name.
>
>Communications Technology, Inc., sold Ham Radio Magazine to

>CQ along with its Ham Radio Bookstore. Does that selling make
>Ham Radio "dead or extinct?" All 22 years of HR are collected
>on three CDs and for sale by CQ and the ARRL. Article lists of
>HR articles are found on two separate Internet sites.

Publication of new issues has long since stopped. All that is available are reprints of existing publications.
>
>The "Radiotron Designer's Handbook" doesn't have any design
>data for transistors or integrated circuits.

There were no ICs in 1954, and transistors were very new technology then.

>It is oriented towards
>vacuum tube design; the "Radiotron" is/was an old RCA trade-
>mark for vacuum tubes.

Which means it's a good book for some things but not others. It's on CD, too.

>By contrast, there are dozens of
>articles in the HR history that include transistors and ICs, most
>of which are still on the market.

Many of them are not.

> A general-purpose NPN
>transistor with transition frequency of 150 MHz can be purchased
>from hundreds of retail outlets for a quarter...a triode vacuum tube
>to do the same circuit task typically costs $5 and available only
>from a limited and shrinking retail outlet group.

Lenover21 needs a tutorial on the basics of enineering econimics as applied to amateur radio home construction.

With certain exceptions, homebrewing of radio equipment with new retail parts is not cost effective. Manufacturers buying lare numbers of parts get quantity discounts, hams buying a few parts don't. Add to this the price of special tools and test equipment, and even simple projects become expensive.

One notable exception to this rule is when parts can be obtained at a small percentage of their retail cost. "Surplus" outlets, hamfests, internet venues and even dumpsters are sources of such parts - including tubes.

Comparison of single-part prices, as Lenover21 has done above, is misleading. What matters in the economic area is total project cost.

The parts cost issue is not a new thing. It is one of the main reasons for the success of Heathkit. More than 40 years ago, it was cheaper to buy a Heathkit than to build an equivalent device from new retail parts.

>>Sales tax often applies.
>
>Oh, my, a REACH for an "argument!" :-)

Yeah, you sure did.
>
>California sales tax is 8.5% (give or take). Other states vary.
>
>ARRL publication prices are the same from surface mail or e-mail

Retailing 101
>
>Shipping charges on a $25 ARRL publication can reach $5.

If it's big and heavy, sure. CDs are neither big nor heavy. CDs constitute
"media" and get the special low postage rate.

> That's
>a 20 percent extra charge over the retail store price. I don't know
>of any US state that charges 20 percent sales tax. Do you? :-)

What $25 publication gets $5 shipping?

Both the Advanced and Extra exams were effortless for me, Jim. (I was drunk as a skunk when I passed my Advanced in the 70's.) Like any other license, the worth of a ham license are the privileges granted. Effort doesn't matter to the FCC.

Bwaahahah - yep, reminds me of when I took my commercial phone. We were getting drunk in the dorm and one of the guys was bragging he had a 3rd class radiotelephone ticket. When I stated that the 3rd class was nothing, he asked me what class I had and the amateur ticket meant nothing. Sooo .. next morning I cut classes (I forget which days which tests were administered in Buffalo, but at the time I knew the phone tests were to be given the next day) and drove to Buffalo. The examiner took one look at me and asked if I really wanted to take the exam. I passed the 2nd class radar endorsed license (and I was NOT sober). I had to go back for the 1st (which I did get) as I found out you had to know the television band splits (where the audio and video carriers were was important, but the 1st question on my exam was 'where is the video carrier of channel 6 television in the United States') and bother to memorize the color burst frequency to the Hertz (3.58 didn't cut it). I did get my commercial telegraph and amateur extra also in 1966. I dropped all of my tickets around 1981 and then got back into the game in 1993, obtaining the GROL (big deal, means nothing) and amateur extra with no study and no cw since 1969. 20 was a push after all of those years, but putting together both a send and receive program in dos for cw got my speed up a fair amount as I did not want to debug the thing at 20 words per minute - too slow.

> answering to you, because there are very few hams allowed on 6m in
> France with the maximal (100 W) power. Others are limited to a little
> output power too low to chat with USA.

Interesting. Firstly, I could operate CW all I desire above 50.2. It is a legal mode there. Secondly, I do NOT operate often above 50.2. I'm usually between 50.100 and 50.130. That's where all of the French stations call. I guess they are all there illegaly. I don't really care if you believe me or not. The fellows are in my log and I'm sure that WA8JOC has sent them all QSL cards.

There is no output power on 6m which is too low to work the U.S. I've worked the West Coast of the U.S. from Guinea-Bissau with 7 watts and a three element yagi. By the way, I'm in Tanzania, not the U.S.

> are located.

Dave:

I certainly know the difference between a French overseas territory and
France. I also know that with my antenna pointed to EU and the band
open to EU, I'm not working overseas territories. The stations are
French. They are below 50.2 (usually 50.115 or 50.110). I have never
worked a French station above 50.2 from any of four different countries
in Africa or from Finland.

Dave, did you ever bother to confirm whether you were working French
bootleggers or not?

You may finally be on to something. It's my word and my business. Why
are you attempting to make it your business? What's yours is the worry
and the indignation. To ease that, you'll need to contact the French
PTT and the REF.

Dave K8MN

Neat, Brian. So we have a Frenchman who tells me that he doesn't
believe that I worked anyone. He tells us that there are a few French
hams permitted 6m with 100w and that others don't have enough power to
work me. He doesn't represent himself as an official of the French PTT
and if he was, his target should have been French reg breakers, not a
Tanzanian licensee working within his authorization. So how I am guilty
of wrongdoing?

Not from Tanzania. I'm in the U.S., Brian. I haven't broken U.S. regs
either.

> Your argument is with what you said then versus what you say now.

No, I disagee. My argument is with some goof who blames me for French
stations operating out of their authorized allocation on 6m--someone who
has not taken any steps to contact the authorities of the country whose
amateur's broke their regs.

> > > > What's all of this to you?

> It all rests with the actuarial tables.

Many folks live much longer than the actuarial tables. I could be
around for another 30 or 40 years given the average life span of the
bulk of my ancestors. You could be gone tomorrow. What has any of this
to do with your misdirected, self-righteous indignity? Are you within
your authorization, Brian? Wanna go for who worked me out of band on
160m?

Bootleggers sending QSL cards, Brian?

Is this supposed to be a reponse to my comment or are stuck in the
"paste" mode? Maybe the French stations were having a heyday.

I can play that, Brian:

N0IMD:
Try this instead: "The F5 station, please confirm your within your
authorization. QSL?"

N0IMD:
Try this instead: "The F5 station, please confirm your within your authorization. QSL?"

N0IMD:
Try this instead: "The F5 station, please confirm your within your authorization. QSL?"

N0IMD:
Try this instead: "The F5 station, please confirm your within your authorization. QSL?"

I especially like the little "QSL?" tag at the end. It really marks you as a sharp op.

Dave said:
I certainly know the difference between a French overseas territory and
France. I also know that with my antenna pointed to EU and the band
open to EU, I'm not working overseas territories. The stations are
French. They are below 50.2 (usually 50.115 or 50.110). I have never
worked a French station above 50.2 from any of four different countries
in Africa or from Finland.

You would knowingly work any ham out of band from wherever you happened to
be licensed (or perhaps not licensed).

I'm suprised the FCC doesn't have a regulation concerning TUI: testing
under the influence. After all, we gotta keep the riffraff out somehow.
;^)

Dave, apparently French stations can have any kind of day they want. Ditto
Tanzanian stations.

>>profit out of the goodness of their hearts?!? :-)
>
>Retailing 101

That's not answering any questions. My last formal Economics
class didn't mention the ARRL. :-)

>>Shipping charges on a $25 ARRL publication can reach $5.
>
>If it's big and heavy, sure. CDs are neither big nor heavy. CDs constitute
>"media" and get the special low postage rate.

According to the ARRL website, the shipping charges on CD-ROMs
are "$5 plus $1 for each additional CD-ROM."

Prove me wrong.

According to the ARRL website, the shipping charges on other
items between $20.01 and $30.00 is $6.00.

That's an additional charge varying from 30% to 20% depending
on item price.

You can prove my original message wrong because my amount
was TOO LOW.

You cannot prove anything else wrong on shipping charges until
the ARRL changes its rates. Go to their own website, click on
"products" then click on "shipping."

You greatly desire making a Big Federal Case out of one thing
in someone's posting, a virtual Battle To The Death in words.
OK, here's your chance.

>> That's
>>a 20 percent extra charge over the retail store price. I don't know
>>of any US state that charges 20 percent sales tax. Do you? :-)
>
>What $25 publication gets $5 shipping?

None. A $25 publication now gets SIX DOLLARS additional shipping charge addition to an order.

That's a 24 percent EXTRA CHARGE. Prove me wrong.

The HRO chain charges a minimum of $6 shipping charges on mail orders but has FREE UPS shipping on orders of $100 or more.

Want to order an official ARRL diamond logo decal? That's cheap at $1 [#1130]. It will cost $4 to ship it. That's a 300 percent increase over the basic price.

How about the official NTS mug? That's only $7 but it will cost $4 extra for shipping. Total price is now $11, not $7, if ordered by mail.

The ARRL is a business. The ARRL is a political action group. The ARRL is a big help to radio amateurs. The ARRL still doesn't have as much as a quarter of all licensed US radio amateurs.

As an 8-year former employee of RCA Corporation I will agree
partly with you. Electromagnetic and Aviation Systems Division,
EASD, Van Nuys, CA (my place of employment) began down-
sizing in '74 and continued to around 1978. The only RCA west
coast division was dissolved and the sub-divisions within EASD
absorbed elsewhere in RCA or sold outright to other corporations.

What seems to bother many is that they EXPECT a constancy,
a never-changing-from-marketing-claims impressed on them at
an earlier time to remain forever. Some think of it as a "royalty"
thing, a divine gift or whatever. :-) Ain't no such thing in life or
in business.

The whole point of this "defunct" business was one poor baby
wanting to toss dirt on another's earlier efforts and thus insulting
a lot of radio amateurs for their effort of keeping an independent
ham radio publication alive and well for 22 years. That was
petty and vindictive, but rather standard operating procedure in
that individual's "contributions" to this newsgroup. :-)

By the same logic and extreme literalization methods:

Collins Radio is DEFUNCT in the ham radio business.
There is no more "Collins Radio" in the midwest since they
sold out to Rockwell International and became a division
of that corporation.

Bill Halligan's Chicago-based Hallicrafters is DEFUNCT in
the ham radio business. Hallicrafters is gone, period.

National Radio in New England is DEFUNCT in the ham
radio business. They've reorganized or whatever and when
I last saw them, did only very specialized electronics work
for governments.

Heath Company of the famous "Heathkit" marque, are
DEFUNCT in the electronic kit and ham radio business.
Heath was sold to Zenith, then sold again to another
corporation, moving to the southeast away from Michigan.
They market a nice set of wireless doorbells (we have a
set here) and some minor home security items that
appear to all be made off-shore.

So:

Collins is DEFUNCT. Hallicrafters is DEFUNCT. National
is DEFUNCT. Heath is DEFUNCT. :-)

"They are NOTHING but 'brands.'" :-)

They are all DEFUNCT. DEFUNCT. DEFUNCT. :-)

A lot of the self-important posters in here seem to be DEFUNCT
of any recognition of others doing good things because the want
to diss others out of spite. They are partially DEFUNCT human
beans in their nonsense. :-)

>CW or CB -- no other choice.

If a radio amateur has designed transmitters and receivers, but does not want to learn code, this automatically makes you a CBer, and not a Ham?

The disgrace to Ham Radio occurs when the test rewards Morse Code skill, but allows you to memorize the questions and answers for the technical licence. Then, your licence class is given for the higher class, when you actually learned code, not the licence class material.

>NO CODE = NO HAM. KNOW CODE = KNOW HAM.

So, a no-code tech is not a Ham, even with a technician licence? How about the radio amateur experimenters that do not want to learn code?

Also, to be a Ham, you must use strange language, like CQ and 73. You must call your setup a "rig", which must sound cooler than calling it a radio setup.

You also like to scan the dial and call out to various people. You have "contests" on who can contact the most people in a given time period.

I guess, you have to be part of that Ham tradition, no deviations, to be a Ham.

Radio amateurs can be fascinated with getting their own radio designs (or tweaking a kit) on the air and not be interested in the terminology or contesting. So, one can be a radio amateur, but not a Ham.

>Oh crap, even I was able to learn 5wpm and I suck when it comes
>to learning "motor skills" type of things.

I probably can learn Morse Code, but I have more important use of my time, like courses towards rf certication. I enjoy rf electronics, which is difficult enough. I don't see how learning code will help that.

>Only 11 months to wait for the suppress of CW in the ITU-RR !

I hope the Morse requirement goes away in 11 months. I will not learn Morse code. I will wait until it goes away before upgrading my licence.

Good thing a technician class gives enough band access for experimentation.

Why would someone operate unlicenced? You could go to your local VE testing facility, have a one day review session, get tested, and get your licence in one day.

Perhaps the CBer does not know this, or does know this and does not want to be a Ham?

Isn't that what they already do right now with Morse Code? You have to know
Morse code to upgrade your licence.

This is more valuable that the rest of Amateur Radio combined, since you
actually have to know it. To pass the technical elements, you can memorize the
questions and answers.

Unfortunately, the ease of the exams nonwithstanding, the examinee might actually have to know something. Although obtaining a codeless tech from ground zero (no knowlege of radio or electronics) might take a week, a lot of folks don't want to put any effort into it. Considering the number of unauthorized stations operating virtually everywhere in HF and the relatively small number of 'busts' by the FCC, I am of the opinion that if one keeps a low profile (running an unauthorized FM station in the FM broadcast band is NOT low profile), you'd have a better chance of winning the lottery than getting caught. I suspect more than a few folks also believe this and thus proceed with whatever they wish to do with little thought of prosecution. You'll find unauthorized transmissions in the marine band - no thought to public safety. As long as *I* can do what I want, to heck with everyone else.

be given away as some kind of entitlement.

>The only worth of a ham license is the
>privileges granted and those privileges are what someone has to lose.

Unfortunately, the easier it is to obtain these privileges, the less they will
be valued by those who have had those privileges granted to them.

"They may be, if you axe them to QSY down to the CW portion of the"

Axe?? The word "ask" refers to a question perhaps you should have
learned English. It would do you better than knowing CW.

If you believe that CW=HAM then I guess you think that
wrestling and Roller Derby are on the level also?

I guess your
just hitting yourself

I've not been out of band while working any ham anywhere I've been in
the world. As far as working those not licensed, how would you or I or
any of us be able to confirm that each station we work is really
licensed? What if you, for example, were to work someone signing F1DR.
Maybe, just to be on the safe side, you should stick to SWLing so as not
to run afoul of the regs.

No, I've never been out of band on 160m either. Maybe you can research
the authorization tables for various countries and cite me for luring
folks to operate their equipment where THEY aren't supposed to be.

>The whole point of this "defunct" business was one poor baby
>wanting to toss dirt on another's earlier efforts and thus insulting
>a lot of radio amateurs for their effort of keeping an independent
>ham radio publication alive and well for 22 years.

Erroneous assessment.

The "business" was all about you, Lennie.

Not Jim Fisk.

Not anyone else.

You.

If you care to try and make such an assertion, YOU are the one casting the stones...not me.

>That was
>petty and vindictive, but rather standard operating procedure in
>that individual's "contributions" to this newsgroup.

And YOUR "contributions" are...???

>Collins Radio is DEFUNCT in the ham radio business.
>There is no more "Collins Radio" in the midwest since they
>sold out to Rockwell International and became a division
>of that corporation.

This is true. Your point is...???

>Bill Halligan's Chicago-based Hallicrafters is DEFUNCT in
>the ham radio business. Hallicrafters is gone, period.

Yes. This also is true. So what?

>National Radio in New England is DEFUNCT in the ham
>radio business. They've reorganized or whatever and when
>I last saw them, did only very specialized electronics work
>for governments.

I don't know these folks, but if they are "defunct", then they are defunct. Again...Your point?

>Heath Company of the famous "Heathkit" marque, are
>DEFUNCT in the electronic kit and ham radio business.
>Heath was sold to Zenith, then sold again to another
>corporation, moving to the southeast away from Michigan.
>They market a nice set of wireless doorbells (we have a
>set here) and some minor home security items that
>appear to all be made off-shore.

Again true, although "Heath" as a company name still exists. They now
sell, among other things, technical training devices. That they are "defunct"
as an Amateur Radio entity is a well known fact.

Still no point being made, Lennie...

>Collins is DEFUNCT. Hallicrafters is DEFUNCT. National
>is DEFUNCT. Heath is DEFUNCT.
>
>"They are NOTHING but 'brands.'"
>
>They are all DEFUNCT. DEFUNCT. DEFUNCT.

In the context that their companies no longer exist, you are correct.

Are we supposed to be "offended", Lennie? I am not. I am sorry they are
no longr in the business, but hey, THAT'S business!

>A lot of the self-important posters in here seem to be DEFUNCT
>of any recognition of others doing good things because the want
>to diss others out of spite. They are partially DEFUNCT human
>beans in their nonsense.

"...in my opinion" was the proper ending for that sentence, Lennie.

Care to favor us with what the point of this was, Lennie? If it was
supposed to "offend" us, i am sorry, but you missed. At least as far as I am
concerned.

Unlike you, I ACCEPT the fact that those entities no longer exist...At
least as far as Amateur Radio is concerned. They ARE "defunct".

Ya know, Lennie, you have made a "point" of both myself and others not being in any one "job" for a career length periods (despite retired status, which I guess doesn't impress you), however it comes to mind that you have never been at any one "job" for any significant period of time.

Did you EVER have a "job" that was more than a few years in length, or was that about all of you they could tolerate short of firing you?

Anybody capable of meeting the requirements gets the privileges whether
they already know the material or have to work their butt off to learn it.

> >The only worth of a ham license is the
> >privileges granted and those privileges are what someone has to lose.
>
> Unfortunately, the easier it is to obtain these privileges, the less they will
> be valued by those who have had those privileges granted to them.

That's not true, Larry. If the privileges don't change, the value of the
license doesn't change. Ease or difficulty in obtaining those privileges
is irrelevant to the value of the license.

1. You are asked to demonstrate that you can switch on
a bathroom ("restroom" for the pig ignorant Yanks; the language
is _ENGLISH_ after all) light, poke your head round the
door and then shout, "Hello!".

2. You are sent a Morse character by sound. You've never heard it
before, so you look it up on a crib sheet and ask the examiner, "Is
it "A"?" He says "No, try again" You say "Is it "N"?". He says, "yup -
congratulations - you've passed the Morse test.

Neither is a skill, and neither is even worth examining, any
more than you'd ask someone to take a test to see whether
or not they can pick their nose.

(As a policy issue, perhaps it is worth a censure motion against
Britain at WARC 2003 for so blatantly abusing the concept of
a Morse test?)

>>
>>Retailing 101
>
>That's not answering any questions.

The only question you posed was rhetorical.

ARRL's publishing operation is using a certain retailing strategy. Obviously
they want people to buy their publications via retail outlets if at all
possible - that's one way they support stores that sell to radio amateurs and
prospective radio amateurs.

Is that bad?

>>>Shipping charges on a $25 ARRL publication can reach $5.
>>
>>If it's big and heavy, sure. CDs are neither big nor heavy. CDs constitute
>>"media" and get the special low postage rate.
>
>According to the ARRL website, the shipping charges on CD-ROMs
>are "$5 plus $1 for each additional CD-ROM."

Postage and shipping are not the same thing. Shipping includes things like the
cost of packing materials, labor, general overhead and profit.

>Prove me wrong.

Why?
>
>According to the ARRL website, the shipping charges on other
>items between $20.01 and $30.00 is $6.00.

So the shipping on a $25 item is $6, not $5.
>
>That's an additional charge varying from 30% to 20% depending
>on item price.

So? What's your point? It's obviously a retailing strategy that encourages
sales through retail outlets rather than mail order, and encourages retailers
to sell ARRL publications.

It's also a strategy that simplifies the calculations and equalizes the cost
for US customers. No "slightly higher west of the Rockies" stuff.

ARRL also runs specials from time to time, using various forms of mail order
discounts.
>
>You can prove my original message wrong because my amount

>>>of any US state that charges 20 percent sales tax. Do you? :-)

Delaware has no sales tax at all, and it's not a long or expensive drive from
Baltimore, Philly or the surrounding areas.
>>

>if ordered by mail.

And your point is? Do you have a suggestion as to how the ARRL should price its shipping? How does Amazon do it?

>The ARRL is a business. The ARRL is a political action
>group. The ARRL is a big help to radio amateurs.

Finally, something we can agree on.

>The ARRL still doesn't have as much as a quarter of all licensed US
>radio amateurs.

ARRL membership has never been more than about a third of US hams. So what?
Check out JARL membership as a fraction of Japanese hams - pitiful.
Unless membership in a national amateur radio organization is mandatory, or nearly so, many if not most hams won't bother to join.

What was the peak circulation of the magazine 'Ham Radio' in its heyday, in total numbers and as a percentage of licensed hams at the time? What was the average over the 22 years of its existence?

What percentage of all licensed US hams are members of NCI?

--

Note that Lenover21 does not use a single diminutive or insulting name in the entire post. No new smileys either. Actually a civil response, except for some shouting.

To pass the Morse code test, one memorizes the characters. It is the only part of the test for which it is easier to memorize than to learn. In fact, memorization is the only technique that works to learn the code.

>one day.

Most people take longer than a day to learn the material to pass the test.
Seeing as this was a discussion about HF operating, what technique do these
people allegedly use to learn the code in a day?

What type of license that permits operation on 5, 6, 8, 10, 12 and 15 MHz is
issued after passing an exam at a local VE session?

> It all rests with the actuarial tables.

One DOES wonder about someone who has such a longterm fixation on the actuarial tables. You feeling all right, Gadfly? Had any serious med problems? Shall we have K4YZ czech you out? I *know* you're not bright enough to be involved in the insurance industry. Puzzling.....

But we already knew that. Somewhere along the way themhad to invest
the time and effort to do it. We know, it was a no-brainer for some, not
so for others.

So Dave should believe a poster who is clearly fraudulant. You prefer
to believe that fraudulent poster rather than Dave. Shows what you know
and where you're coming from.

Sometimes he won't. Much or most of the time one can tell the difference
in the way characters and spacing comes out. Can't you? Few CW ops are
machines.

Larry's not the only one upset with what has happened to ham radio, by
several hundred thousand.

An electronic keyer is a machine. How do you tell the difference between
electronic machines? Would you bet $1000 that you can tell the difference
most of the time?

This came from the Newbury & District Amateur Radio Society
web site at http://www.nadars.org.uk/ . This is the FAQ section
about the foundation licence course that they offer.

I got tired of reading all the 'white washing' about the M3 class
license and went searching for some solid facts.

--
'73' From KB9TMP
"The secret of life is honesty and fair dealing,
if you can fake that, you've got it made."
-Groucho Marx

Q. How much does the course cost ?
A. £15. In return you get two full days at the course. A Morse assesment (Which is £5 if taken on it's own). An RSGB book produced especially for this course. All test fees.

Q. Do I need to book my place on the course or pay a deposit ?
A. Yes & Yes. A £5 deposit is required. In return you will get your copy of the RSGB foundation licence course book, so you can read it before you attend the course.

Q. Do I still have to pay for a licence ?
A. Yes. An amateur radio licence costs £15 per year. Free for under 21's

Q. Do I need to bring anything ?
A. Yes. Bring photo ID, calculators are not needed, but pens / pencils are.

Q. Is there an age limit ?
A. No.

Q. What hours does the course run from / to ?
A. 9am to 5pm. There will be a radio station set-up at the course, so time after 5pm will also be available to use the station.

Q. Is there an exam ?
A. There is a Morse code assessment (which is easy, even if you have never had any experience of Morse). Also, there is a multiple choice test at the end of the course. If you attend the course you should have an excellent chance of passing the test.

Q. Do I need to join the Newbury club or the RSGB ?
A. No. But if you live near Newbury, you should think about joining the club as we have got a lot to offer you. there is also a reduction for the first years membership fee. The RSGB is our national society and provides some excellent services for members.

Q. Do I get a certificate ?
A. Yes. After completing the course.

Q. What sort of radio do I need and how much do they cost ?
A. Foundation licence holders are not allowed to make their own transmitters, so you have to buy commercially made equipment. HF radios let you talk to the world, new radios range from £500 to to £5000 and secondhand starts at around £75. VHF radios are for more local contacts, new radios range from £50 to £1000, with secondhand sets starting as low as £20.

Q. How many people can I speak to ?
A. There are around 60,000 radio hams in the UK and about 2,000,000 worldwide.

Q. What is the RAE ?
A. The RAE (Radio Amateurs Examination) is the traditional amateur radio exam. This test is much harder than the foundation course, but in return you get a better class of licence. After you have been on the air for a while with a foundation licence, you may like to consider taking the RAE.

Q. What about the 5 words per minute Morse test ?
A. Traditionally to have access to the HF bands you had to pass a Morse test at a specified speed. This requirement was in place as we were sharing some of our bands with marine stations that still used Morse code. It is still a requirement to pass this Morse test to get a full class A licence, though this is likely to change. For the foundation licence you do the "Morse assessment" instead.

Q. What is the Morse assessment like ?
A. It is a Morse test, which runs at such a slow speed that you have got time to look up the sounds on a chart. For example you hear "dot dash" and you are given enough time to look at a chart and see that "dot dash" is Morse code for the letter A. The same sort of thing happens in reverse and you transmit some code back to the assessor.

Q. Does anyone use Morse code these days ?
A. Most certainly. It is one of the most efficient modes of communication available to a radio ham. Simple equipment can be used and often contacts are made in Morse, when no other signal would get through. Even though you don't HAVE to learn Morse, you may well find that it will be something that appeals to you once you get on the air.

I wasn't out of band.

> F1DR replied directly to you.

There isn't any F1DR. Someone who sez he's F1DR replied to me. You saw
my response. I wasn't out of band.

> You responded directly to him. Then you say you know nothing about > it. What's that
called?

Forgetfulness? I've not been in Tanzania for over two years. Do you
remember everything you've said or written in two years. In what way

does my response to the make-believe F1DR change what I've said about my actions? What is any of this to you, Brian Burke, a non-resident of Tanzania or of France on a matter in which you are not involved? You've not even attempted to address your indignity to those who broke their country's amateur radio regulations?

QSL?

I suspect that the sentiment was similar to comparing a tech to an extra however, the difference is that there really have been those two classes available in G-land since the very early 70's. Actually, the difference between the old CLass A and Class B licenses was more akin to the difference between a 12WPM and a no-code Extra as the morse test was the only thing that set one beside the other.

The new Foundation Licence is vastly more elementary than the old US novice test. The morse assessment is truly a joke and can in no way be considered any test of morse sending or receiving competence.

Actually, I take back that previous sentence; the morse assessment would be sufficient for someone who only wanted to take part in the QRSS (ultra-slow speed morse) experiments on the 136kHz LF band!

Well, perhaps...

As you can see, the effort necessary to get a Foundation (CB) licence is two days - from no interest nor background whatsoever.

What do you learn in two days? Why - to switch something on and say, "Hello". There's nothing in such a course that deserve the respect of any Radio Ham.

The "Morse Assessment" as you can see, is a travesty of any international requirement.

It's a CB licence, fair and square.

What is the morizaion of the questions and answers? Do you mean that if
I memorize that the answere to question XX-XXX is letter "D"?

You mean that a person memorizes the thousand some questions for Extra
that way?

Is that easier?

Perhaps for an idiot savant it would be. I studied from the pools, and
rote memorization of "question # X has answer X fails on two fronts.

1. There are a number of subjects, and the questions within the area
are similar, with slightly different takes on them. some times the
answer of one question is the question on another. But most of the stuff
is related. So if you figure out the basic concept they are working on,
you'll get the question in whatever form it is posed to you. When I
studied for my Extra, I studied the guide, then took a few practice
tests. From these results I saw where I needed brushing up. then I hit
the books. Works like a charm.

2. The answers to the questions are not in the same order as the study
guide! Whereas the answer might have been "B" on the pool, it might be
another letter on the actual test. Well, there goes rote memorization.

There is no doubt that the answers to the questions are in the pools.
The answers are also in books. Same difference to me. Perhaps the person
taking the tests should not be allowed access to the books either. That
way only really really smart people can pass the test.

"Indoctrinization"?

There's no reliable data that I know of which would correlate the
influence of family members, particularly parents. Perhaps Vshah101
could download the FCC license database and have a search routine find
all licensees with the same address and same surname.

While it's to be expected that the children of hams will be more
likely to become hams themselves, this effect is rather slight. Like
AA2QA, most of the hams I have known in my 35+ years of hamming have
been the only radio amateurs in their immediate family. The "all ham
family" is so unusual as to be noteworthy.

--

Note that the massive reduction in both code and written testing
brought about by the 2000 restructuring has not resulted in
large-scale growth of the ARS. Nor have Technicians dropped out in
large quantities. It will be interesting to see what happens to the
growth if/when code testing disappears in a year or so.

>
>If memory serves, Heathkit is still in the educational kits business.

There is NO exception. Collins Radio is DEFUNCT.

"Rockwell Collins" is NOT in the ham radio business...therefore
"Collins" is DEFUNCT in ham radio.

Heathkit Educational Systems still exists in Benton Harbor
(455 Riverview Drive), a slight shade of its former self, the
Heath Company. Heath and Heathkit do NOT make radio kits
for amateur radio. Heath is DEFUNCT in the ham radio business.
Heath is also DEFUNCT in marine radio equipment, once a
"big thing" in the Heath Company line (complete with a couple
of power boats).

Heath/Zenith is also in business...but are marketing ready-built
doorbell-chime and home security devices sold through such
small retailers as Home Depot and Lowe's. There is probably a
lot more RF generated by Heath/Zenith wireless doorbell units
in the USA than RF generated by Heathkit Educational Systems.

When folks take up the "DEFUNCT" logic and labeling, they have
to be consistent or they make ERRORS, MISTAKES, and LIE
about their suppositions. To attempt "exemptions" is to make
their "logic" DEFUNCT.

The 20 WPM morse code test for an amateur radio license in
the USA is DEFUNCT. Dead. Extinct.

No Heathkit Educational System business will bring any of that
back.

Better have the ARRL immediately remove and trash the CQ
collection of Ham Radio Magazine articles on the ARRL product
list. According to the Word of Extras, Ham Radio Magazine is
DEFUNCT. Dead. Extinct.

>
>The only question you posed was rhetorical.

Nonsense. Inaccurate. The Word of Extras in here has the ARRL
as acting out of the Goodness of Their Hearts.

Goodness of the Heart does not have a monetary profit motive.

>ARRL's publishing operation is using a certain retailing strategy. Obviously
>they want people to buy their publications via retail outlets if at all
>possible - that's one way they support stores that sell to radio amateurs and
>prospective radio amateurs.

Again, obvious nonsense.

If the ARRL "wanted peoble to buy their publications via retail
outlets," why would they have them for resale through headquarters
in Newington?

How many "retail outlets" for amateur radio equipment are there in
the USA? [ask K0HB]

>>>>Shipping charges on a $25 ARRL publication can reach $5.
>>>

>>>If it's big and heavy, sure. CDs are neither big nor heavy. CDs constitute
>>>"media" and get the special low postage rate.
>>
>>According to the ARRL website, the shipping charges on CD-ROMs
>>are "$5 plus $1 for each additional CD-ROM."
>
>Postage and shipping are not the same thing. Shipping includes things like
>the cost of packing materials, labor, general overhead and profit.

Duh...

OK, order an official ARRL membership decal (#1130) for a dollar.
Do you or do you not pay FOUR dollars in shipping charges to
include "cost of packing materials, labor, general overhead and
profit?"

An envelope, 37 cents in a stamp, a zip through a computer-
controlled printer for the addressing and 1/12th of an hour time
(at most) of a clerk to handle it. All that "shipping charge" is
still worth FOUR TIMES the cost of the product itself?!?

Is there NO PROFIT in the product ITSELF?

Note: The ARRL sells its publications to retail outlets at a
lesser cost than it charges to individuals. Does the ARRL
"take a loss" on that difference in price? I don't think so.

That difference in price is a lesser profit for the ARRL but it
still represents PROFIT on PRODUCT.

>>Prove me wrong.
>
>Why?

...that seems one of Jimmie's Divine Missions...to squash, trash,
and rebuke any negative commentary on the ARRL and his vision
of amateur radio. :-)

>>According to the ARRL website, the shipping charges on other
>>items between $20.01 and $30.00 is $6.00.
>
>So the shipping on a $25 item is $6, not $5.

Oh, wow, a chance to make a Big Argument on Mistakes and
Jimmie fluffed it! :-)

You should have made a Big Argument here! After all, you cannot
have lower-class individuals making "mistakes" and "errors" about
the ARRL or anything else, can you?

>So? What's your point? It's obviously a retailing strategy that encourages
>sales through retail outlets rather than mail order, and encourages retailers
>to sell ARRL publications.

Sorry, that's not a justifiable statement. There aren't enough ham
radio retail outlets in the USA to satisfy such a condition.

There MIGHT be an urban amateur radio retail outlet to SOME folks
within around a two-hour driving distance, but that isn't true even in
the 48 contiguous states of the USA.

>It's also a strategy that simplifies the calculations and equalizes the cost
>for US customers. No "slightly higher west of the Rockies" stuff.

Poor reaching for a rationalization, no longer applicable or
reasonable in days of Fed Ex and UPS delivery in addition to
USPS.

Don't reach for the "east coast elitism" schtick, sport, the
center of population of the USA went west of the Mississippi a
long time ago.

>ARRL also runs specials from time to time, using various forms of mail order
>discounts.

Oh, wow! :-)

>Why are you so worked up about all this?

Why are you? Nobody invited you into this sub-thread...you stuck
your nose in as some kind of Noble Public Defender and Knight In
Shining Underwear to defend the ARRL. :-)

>>You greatly desire making a Big Federal Case out of one thing
>>in someone's posting, a virtual Battle To The Death in words.
>>OK, here's your chance.
>
>You're mistaking me for someone else.

No, Noble Knight, you have a billboard advertising your intentions.

It's so blatant you couldn't get any more obvious unless you took
out newspaper ads or TV advertising... :-)

>>>> That's
>>>>a 20 percent extra charge over the retail store price. I don't know
>>>>of any US state that charges 20 percent sales tax. Do you? :-)
>
>Delaware has no sales tax at all, and it's not a long or expensive drive from
>Baltimore, Philly or the surrounding areas.

BFD. PA used to claim proudly that they had no tax on dry-cleaning,
either...:-)

The center of USA amateur radio interest is NOT in the middle of
the Atlantic seaboard.

>>That's a 24 percent EXTRA CHARGE. Prove me wrong.
>
>Is there a point to all this?

To reiterate, you stuck your nose in here and wanted to make with
the Big Argument, Noble Knight. Are you going to make this a
Bigger Argument? A virtual Fight To The Death in words? :-)

>And your point is? Do you have a suggestion as to how the ARRL should price
>its shipping? How does Amazon do it?

My wife and I just got an Amazon delivery on about $50 worth
of books. NO SHIPPING CHARGES. Not only that, we got
a discount on the books over the retail store prices.

Amazon is still a profit-making business. As far as I know, they
are NOT a political action organization. They resell books and
other products. NO SHIPPING CHARGES means they managed
to stay in business, making a profit, all the while absorbing those
high shipping charges plus their "burden" (bean counter talk for
the overhead of plant and equipment and all other miscellaneous
business costs).

The ARRL will copy individual article pages in QST for the low
price of $5 per page ($3 per page to members). Wow! Do you
consider that "inexpensive?"

>ARRL membership has never been more than about a third of US hams. So what?
>Check out JARL membership as a fraction of Japanese hams - pitiful.

This isn't about Japanese radio amateurs. My comment was on the
high "shipping charges" of the ARRL. You try to misdirect the
sub-thread to some off-shore "discussion" which doesn't apply.
You will do that misdirection again, as below -

>What was the peak circulation of the magazine 'Ham Radio' in its heyday, in
>total numbers and as a percentage of licensed hams at the time? What was the
>average over the 22 years of its existence?

Misdirection in trying a different sub-thread. Bad form.

Ham Radio Magazine and its spin-off Ham Radio Horizons, were both
INDEPENDENT amateur radio related periodicals. They were not
membership magazines and kept in business solely through
advertising sales. Communications Technology, Inc., never tried nor
represented itself as an amateur radio membership organization.

QST is a MEMBERSHIP MAGAZINE, so said in capitals because
so few understand the difference between that and an independent.
The "subscribership" numbers of QST are the same as the ARRL
membership. QST doesn't depend solely on advertising sales to
keep going but can receive backing from the ARRL general budget.
[whether or not they do so is irrelevant...the fact is that QST is
backed by the ARRL because it is THE periodical of ARRL
membership]

>What percentage of all licensed US hams are members of NCI?

No Code International is, in its own statements, solely a political action organization. It does NOT require all members to be licensed in any radio service. Further, it has said since the beginning of its organization that it will dissolve when the morse code test requirement for an amateur radio license is eliminated.

There has NEVER been ANY statement from the ARRL saying it would dissolve for any reason. Indeed, it's been quite an opposite continuing set of statements and pleadings to join them. :-)

Well, Jimmie, since you are such a booster of the ARRL and one of their champions, how would you handle "incentives" to join this illustrious organization? Would you INCREASE shipping charges under some rationalization of "you get what you pay for?" :-)

Hate to spoil a really grand rant, Len old boy but Heath and Rockwell Collins are still in business no matter what they are doing. So is R. L. Drake for that matter. "Ham Radio" magazine didn't change its target market audience to the VCR repair trade. It is gone. It is no longer being published.

> Better have the ARRL immediately remove and trash the CQ

Why would anyone do that, Len? I can still buy old copies of the Supreme Publications material on CD. Why would I want the CD reprints of the defunct "Ham Radio" magazine taken off the market--just to increase the value of the printed versions I kept?

Dave K8MN

A machine with an OPERATOR who inserts the spacings and all the
inflections. I have a few of them, some built into rigs.

How do you tell the difference between
> electronic machines? Would you bet $1000 that you can tell the difference
> most of the time?

I wouldn't bet with you on a sure thing. You might find a new, never
used dictionary definition, so stuff it. But an experienced high speed
CW op, or even a midspeed op, can usually tell if its computer
generated.

I happen to collect past issues of various CB and AR periodicals. I'm one of those kooks who feels the best way to see where things are going is to study where they're coming from. While I have no specific sources to quote, most publications put the number of "licensed" CBer's at approx. 20 million during the height of the "craze." Now, given the popularity of 11-meter "hobby" radio, I have no reservations of reducing the "craze" population by two-thirds or even three-quarters. Add to this the number of truckers who use the CB along with other non-hobbyists, and I'm quite comfortable that that number stands up quite well. (That's not even counting non-US 11-meter ops.)

Now, while you may not see as many CB antennas in your area...I still see a good amout in my travels. I personally use my 80-meter doublet as it's convenient to just use another input to the tuner for the CB, so you won't see a CB antenna over my roof either. (God, trees make GREAT towers!) The trick is not so much how many are there as is how to get them all to pull on the same side of the rope? Jerry's idea is one of the few that actually has a shot-n-heck at accomplishing this. That'd be pretty funny if you ask me...irate ARO calls for the abolition of the CB (Remember, we're talking legal 40 now.) and unwittingly becomes the "father of the uprising." Of course, I'm joking Jim. Just having a laugh and injecting some levity into the situation. Type 11-meters into your favorite search engine and tell me if six to seven million seems terribl exaggerated. If so let's back it down to say, two and a half million. Hey, aren't there only approx. 680,000 licensed US ARO's. Who'd-a-thought? Take care now. :-)

I wonder if anyone has tried the Koch method after already knowing
Morse? If it would work, it could be a nice method of increasing your
copy speed.

Gotta say it Larry....SHEESH! I'm a pro-coder, know much more than
enough electronics to get through the door, having a blast on the
digital bands and yet..... I'm just a CB'er.... cuz 13wpm I'm not.

Bummer.

I can take Len's side on this, because I too have first-hand knowledge
of the volatile "we lose a contract you lose your job no matter how
good you are" nature of the defense industries in the Los Angeles
area starting in the late 50s.

In the course of the 7 years before I got out of defense work and
went into radio regulation as a career, I had three employers,
all of whom were major names in the business and the first two were
ones where Len worked although we were not there at the same time.

Not surprisingly I worked on the same USAF project at all three, one
after the other.

Just like grape pickers, brain surgeons, or nuclear physicists,
one follows the work.

I used it first on a guy with terrible left/right copy problems using the
old 73' magazine 13, really 16, wpm tapes. Used the same tape on a guy
who did not know code at all and about 32 days later he passed the
Advanced. So I took Wayne's 24 wpm tape and did it to myself as an
Advanced to whom CW never came easy and along with a nite at Field Day on
20cw with a kw passed the Extra putting the exam down in 5-letter
groups -- which did not phase the FCC lady one bit. Actually I think it
took both, when the birds and crickets at 5 AM when you are filling the
generator tell you you are 5-9 in South Jersey you have some confidence
you can and the tapes actually made it easy.

So yeah, Koch works and works well whether you know the code or not.

Do you think the operator cannot insert the spacings used by a computer?
My IC-750pro electronic keyer is, no doubt, performed by a computer. The
spacings are programmable by the operator. The CW timing on my SCS PTC2e
modem is fully adjustable.

My degree is in 60 Hz Power Generation and Distribution, Dick. I don't
recall ever using a Smith Chart for anything while I was in college.
K7JEB taught me everything I know about a Smith Chart 30 years after
I got my EE degree. He held a Technician class license at the time
(along with a radiotelephone commercial license).

Well, then I think you have it wrong. If anything, the exams nowadays
are harder, it's just the CW is easier since it only has to go to 5wpm.

In the old days you almost knew what the exam was. You could get
what was called the 'Bash Books' and basically know what you needed
to walk in and out with a ticket. Now you have 'question pools' that are
at LEAST an order of magnitude than they used to be, you have many
more varied and dissimilar topics, and you have a MUCH more controlled
environment at the entry level.

Mike

Yes.

After Novice enhancement, a novice decided that 220 wasn't populated enough,
and the linked repeaqter wasn't where the action was. So he went directly
on 2M.

While on Guam, a not yet licensed individual contacted me and used someone
elses old call. I happened to know that someone else, and the voices didn't
match.

Your ethics would have me talking to both all day long.

later,
> your delusion has changed that to a YES?

You keep me guessing with an unclear answer that I've asked you to clarify,
but won't. You did, however, post a lot of words.

I asked what WOULD you do. You said:

1. it never happened to you and ignore the question
2. say that Dave's OK with what he did, implying that you would do the
same, i.e., keep working them out of band.

Here's you chance to clarify.

> >And then question my reputation.
>
> Another delusion, Brian; I didn't question your reputation.

You questioned my integrity.

> Must be more "What was said; what Brian heard" sorts of things.

Well there you have it!

Cronyism.

What?

When I hold the paddle as if it were a single continuous tone, the keyer
makes it go, "dididididididit."

The KEYER inserts the spacing.

I'm waiting to hear the "POP."

But Dick, you demanded "effort."

Thus we need multiple exams for each license class, each one designed to be
a challenge. Then we pre-screen applicants with an aptitude test, and then
administer the appropriate exam that will provide that challenge. That way
everyone must put out equal effort.

From: Angel G <digimode@nospam.com>
Message-ID: <200279-1246-351156@foorum.com>
Source record: 48817

Well, about 680.000 US hams and no PSK31 from USA on 6m ? Where are you ??

3rd millenium is the age of new radio technology, it's time to show to the world that ham-radio operators are not only sticked with OBSOLET CW. If the TITANIC had the PSK31, all the passengers had been probably saved.

There are nice softwares like WinpskSE, use it !

There is a lot of PSK31 on 10m but very very few on 6m. Hurry US guys, call Europe in PSK31 ! We listen to you in PSK31 between 50.250 and 50.280 MHz. TNX

>people allegedly use to learn the code in a day?

Yes, but if Morse Code was being transmitted, then it wouldn't be CBers making those transmissions. You mean there are CBers that went through the effort of learning code?

After all, it is said "Learn code so that Ham Radio does not become CB". So, by definition, if Morse Code was being transmitted, it was done by Hams.

No one memorizes the letters. You use the helpful memorization tips used in the question book..

>You mean that a person memorizes the thousand some questions for Extra
>that way?
Around 655 questions. Yes, its easier if you have the questions and answers. You tend to associate the questions wording with the answer's wording. This is what happens.
Problem with that is you tend to remember it for the test and then forget it one week later.

>1. There are a number of subjects, and the questions within the area

"Web:"

I'm merely using the word "ask" in the manner in which it is
pronounced by the most politically-correct group of people in this
country. What's the matter -- are you a racist bigot or something?
If there is something incorrect with that particular pronunciation,
please, enlighten us -- what is it, what causes it, and why do
more educated, cultured, and conservative members of that same
group use the correct pronunciaton "ask" -- thus proving that it's
not some kind of ethnicity-related speech impediment?

Funny -- I've yet to have the experience of answering a CQ and have
the guy on the end say, "I don't want to talk to you!" Of course, that
may be because I live in Delaware, and am a fairly rare commodity on
CW. I guess it's a good thing I don't live in Florida -- where, apparently,
80% of all living CW operators currently reside!

>but
>copied by ear. How would Larry know the difference?

Ed:

Through experience as a CW operator, I have trained myself to be able to discriminate between hand-keyed Morse and that sent using mechanical keyers (bugs) and electronic keyers. A lot of sloppy LIDS can do a good job of mucking-up their code even using keyer/paddle combinations and keyboards, although keyboards would be less likely to do so. Whenever you hear something being sent all run-together, but with accurately-timed "dits" and "dahs," you know you've got a LID behind a set of paddles. Unfortunately, a lot of CW LIDS tend to increase their speed by reducing inter- and intra-character spacing, rather than by just sending their characters (and spaces) at a faster rate. It's getting quite rare these days to find a CW operator who can shift from 13 to 20 WPM and keep his inter- and intra-character spacing proportional to his/her aggregate sending speed. When someone is sending with a keyboard, I can usually "head copy" them 10 WPM faster than I can if they're using a manual key or keyer/paddle combo, simply because I'd be hearing correctly formed letters and words, rather than an unintelligible mush.

Mike:

Unfortunate, but that's YOUR problem, not mine! Fortunately for myself and all other Pre-Restructuring Amateur Extras, I gained my privileges under a more challenging and comprehensive set of licensing requirements, includiing the requirement to know the Morse code at 13 - 20 WPM.

Today, being a "pro-coder" will have to mean that you will embrace the CW mode, get your code speed up to 13 WPM and beyond without the incentive of increased privileges, and encourage other hams to do likewise (since you'll want to work someone in CW on-the-air, presumably). However, your permanent, irrevocable status as a dumbed-down, cheaply-licensed, underclass, welfare-recipient ham is your gift from those who decided that the code testing requirements had no value to the ARS.

Cecil:

One way or the other, an effort had to be made to gain that knowledge.
The fact that a new reason to value that knowledge has been found
would only tend to reinforce the appreciation for the privileges gained
through it's use.

>> >The only worth of a ham license is the

I understand your original point. However, it is assumed that anyone using CW mode does not want to "talk" to the amateur operator in question because "talking" is only possible in voice mode. It makes perfect sense that the 13 wpm operator would not wish to "talk" to Larry or anyone else while operating in CW mode.

What I find curious is that all you guys are hanging out listening to
the that stuff-whatever it is. Doncha have more constructive things to
do?

>>The "Radiotron Designer's Handbook" doesn't have any design
>>data for transistors or integrated circuits.

>There were no ICs in 1954, and transistors were very new technology then.

"New?" Seven years. TM 11-690 came out that year, not only had the standard transistor symbolism but lots of different schematics and nomenclature and some design data...all for transistors.

1954 was 48 years ago. I was in the US Army Signal Corps then, controlling HF transmitters. What were you doing?

>>It is oriented towards
>>vacuum tube design; the "Radiotron" is/was an old RCA trade-
>>mark for vacuum tubes.

>Which means it's a good book for some things but not others. It's on CD, too.

We KNOW it's on CD, speedy. I have one. Makes a nice little artifact, sort of good for having to revitalize an old tube set. :-) Audio Amateur Press produces the CD. They are in Peterborough, New Hampshire.

>>By contrast, there are dozens of
>>articles in the HR history that include transistors and ICs, most
>>of which are still on the market.

>Many of them are not.

2N3904, 2N3906, 2N4124, 2N4126 are all still available on the market, new, just as they were 30 years ago. Complementary symmetry transistors, general purpose types with f-sub-t to 150 MHz.

THEORY is hardly ever out of date, is it? Or do you think ham radio theory only comes from the Big Brother in Newington?

>> A general-purpose NPN
>>transistor with transition frequency of 150 MHz can be purchased
>>from hundreds of retail outlets for a quarter...a triode vacuum tube
>>to do the same circuit task typically costs $5 and available only
>>from a limited and shrinking retail outlet group.

>Lenover21 needs a tutorial on the basics of enineering econimics as applied to
>amateur radio home construction.

Jimmie needs a lesson in civil comportment on newsgroups. He also
needs to realize that he doesn't know but a teeny fractional percentage
of all US hams who build at home...and probably doesn't know squat
about the many more electronics experimenters who have home
workshops.

>With certain exceptions, homebrewing of radio equipment with new retail parts
>is not cost effective.

So...I can't buy those common transistors from, say, Digi-Key
today? No problem. Single-piece price for them are 21 cents
each (less in quantity), maybe another 4 cents each for the
small-quantity shipping charge. Need some common rectifier
diodes like the 1N4001 through 1N4007? Digi-Key's price is
10 for $1.36 "cut tape" (they come on an ammo-belt like tape)
or 13.6 cents apiece.

Digi-Key carries an enormous selection and sells singles through
thousands. www.digikey.com

>Manufacturers buying lare numbers of parts get quantity
>discounts, hams buying a few parts don't.

Oh, my, another excuse! A single transistor is functionally
equivalent to a triode vacuum tube. In the year 2002 hams can
buy small quantities of common complementary-symmetry
transistors at 21 cents apiece in 2002 dollars while in 1962 an
electronics experimenter got lucky on finding a 6C4 triode at a
bargain price of 97cents in 1962 dollars.

You need ICs? Digi-Key, Newark, Allied all have them at low
prices for small quantities. There's too many to pin down for
examples but that can be done (I could quote logic devices off the
top of my head but the PCTAs don't believe in digital circuitry so
it would be wasted effort).

>Add to this the price of special
>tools and test equipment, and even simple projects become expensive.

Ohm my, a trusty Simpson 260 doesn't cut it by itself? :-)

If you want everything in a hobby to be "simple projects" then
content yourself at building tuna-tin transmitters and that good
old standard, the regenerative receiver using a single tube! :-)

Maybe QEX should cease publication because all these things
with states of the art past 1962 are "complicated?!?"

>One notable exception to this rule is when parts can be obtained at a small
>percentage of their retail cost. "Surplus" outlets, hamfests, internet venues
>and even dumpsters are sources of such parts - including tubes.

OK, you get your stuff out of the dumpster...and the quality of it will
let your project go right back to the dumpster.

>Comparison of single-part prices, as Lenover21 has done above, is misleading.

"Misleading?!?" I just got the July-August 2002 Digi-Key catalog
the day before, double-checked the prices quoted since they were
so low. Choose any modern catalog you want, Jimmie, go to any
current website and you will see all kinds of low-cost solid-state
components, all kinds of low-cost passive components. You just
won't find those dandy whiz-bang 1962 "ham" components hardly
at all because so few bought them that dealers quit stocking them.

>What matters in the economic area is total project cost.

Yeah, like the cost of the magazine whose article was the interest-
spark to build something in duplicate...so that the builder could
then brag to his buddies all about "designing and building some-
thing all by your lonesome." Uh-huh...heard that before...like how
many times?

>The parts cost issue is not a new thing. It is one of the main reasons for the
>success of Heathkit.

True for 1962. By 1972 Heath Company was starting to feel
competition from the ready-builts in some electronic areas. By
1982 the competition was definite and sales began sliding for
those vaunted kits. Sorry, but for MOST of the kits from Heath,
the DESIGNS were also cheap and they were not the optimum
in performance or accuracy when compared to the ready-builts of
1982.

The Heath Company KIT in ham radio is DEFUNCT. The same for
color TV. The same for test equipment. The same for marine
electronics. DEFUNCT. All you have left is an emotional surge of
nostalgia that NTIS cannot calibrate.

>More than 40 years ago, it was cheaper to buy a Heathkit
>than to build an equivalent device from new retail parts.

Well then, Mr. Who-Do-You-Know-Who-Designs-His-Own-Station
you just hang in there with your Elecraft KIT that you builded all
by yossef with your hot little solderin iron. Did you DESIGN it?

Hate to spoil a big effort to squeeze out a Word of Extras, Dave,
but WHAT AMATEUR RADIO PRODUCTS does Rockwell
Collins make?

Are you going to say "mechanical filters?" If so, does
Rockwell Collins market those SPECIFICALLY for ham
radio? I don't think so. Rockwell Collins is in business and
will sell those to anyone.

By the same associative logic you will want to use, a
fastener manufacturer can make a fastener good for holding
together some piece of ham gear...but that doesn't mean
those fasteners are specifically marketed for ham radio.
Don't try to screw anyone with that kind of distant association.

Let us know when the brand-new KWM rolls off the Rockwell
Collins assembly line, specifically marketed for ham radio.

WHAT AMATEUR RADIO PRODUCTS does Heath make?

Inform the masses oh mighty extra.

Please try to differentiate between "Heath" as in Heath/Zenith
and "Heath" as in Heathkit Educational Systems. They aren't
the same company. Heath/Zenith makes a nice ding-dong;
Heathkit Educational Systems is a ding-dong.

I'd say, by the Word of Extras, that the DEFUNCT kind of logic
makes Heath and Rockwell Collins DEFUNCT insofar as
the amateur radio business.

What outlet carries NEW amateur radio products from
Heath or Rockwell?

> under a more challenging and comprehensive set of licensing requirements,
> includiing the requirement to know the Morse code at 13 - 20 WPM.

I looked into that. The cw test was harder by virtue of it's greater
speed, but that was about it

> Today, being a "pro-coder" will have to mean that you will embrace the
> CW mode, get your code speed up to 13 WPM and beyond without the

> likewise (since you'll want to work someone in CW on-the-air, presumably).

Who made that definition? I happen not to wish to use Morse, yet I
support it's testing. That is Pro code to me, and to a lot of others I
think.

> However, your permanent, irrevocable status as a dumbed-down, cheaply-
> licensed, underclass, welfare-recipient ham is your gift from those who
> decided that the code testing requirements had no value to the ARS.

And you have an apparent ability to judge people based upon some rather
shallow criteria. As you may recall, when someone was once disparging
your occupation, I came to it's and your defense, noting the
responsibility and serving the general public good. Isn't it awful when
someone is can make judgements on you on the basis of such shallow criteria.

It's probably better to judge people based on their actual personalities
and abilities than something as simple as the ability to send Morse
Code, or what you consider to be a dumbed down tesating process.

Frankly, you remind me of some of those 10-10 people that you purport to loathe. You are ready to cast judgement on a person based on a criteria which is just plain irrelevant.

Plonk!

I've got oa disagree, Larry. As a VE of several years, I saw a lot of
hams pass the 13 wpm test that were not anywhere near capable of using
it on the air. Most of them, in fact. But they got the experience and
drill of learning it to some useful level. That's about all you can
expect from licensing at that speed with the tests in use. The hams who
find CW interesting and fulfilling enough to go on to real proficiency
will do it anyway. But for the most part, only if they learn it for

licensing. From long years of field experience I'm convinced not many will do it otherwise.

It's sort of like me not ever spending the time and concerted effort to learn the Smith Chart. I just never did get around to spending the time and effort required to master it out of a book. I never needed it enough to warrant the time and effort since almost all of my ham antenna building was conventional and I didn't build them at work, only analyzed failures and directed tower climbers in repair and replacement.
Side note- Why hasn't anyone ever written and published a stgraightforward, sensible tutorial on the Chart? Every publication I ever saw was so wrapped up in lengthy discourse over all the details they never get around to saying how you actually use it. Even the late Joe Carr's effort in his book "Practical Antenna Handbook" did the same. He did say that it's a "powerful tool for the RF designer". I guess if you're not a RF designer you don't really need it. But I'm still curious enough that I think I'll give it a try .

Larry,

If you mean to defame me as a "Restructured CB'er", that's one thing. But you have no right at all in telling me what callsign I am entitled to. My callsign happens to be that of my late father, who was my "Elmer" in getting interested in Amateur Radio. HE worked his way from Novice in 1955 to General Class (having done your "precious" 13-wpm code). I am proud to have my father's callsign, regardless of whether you think I am entitled to it or not. Nobody just handed me my license out of a cereal box. Granted, I can't operate CW at more than 5 wpm, but you know what?? WHO CARES!! If I was going to sink to your level of thinking, I could say something like CW is the way of the dinosaur and that when all the old Hams (no offense meant to the older Hams...just making a point) dry up and go away, it will be the so-called "Restructured CB'ers" who will continue with the ARS. But I am above that and I will embrace every facet of the ARS. I may not be able to copy and send CW over 5 wpm, but there is more to it than that. Digital modes, such as APRS, Packet and PSK-31, are up and coming modes in the Service today. Emergency Communications, especially in the wake of Sept. 11th and the raging fires in CO and AZ, played a key role in helping cope with the aftermath that this country endured. Could 13-wpm CW have filled the needs for message handling to the variety of relief services that were involved? How many people at the Red Cross, Salvation Army, local law enforcement and fire departments know 13-wpm CW? Just because I don't use a keyer doesn't make me any less of a Ham.

I'm a restructured Extra with an old-timey looking/sounding Vanity callsign.
But wait, it is old-timey - same one that I held 50 years ago when I also
held all amateur frequency privileges.

I did a double take on John's callsign.

k 2l sx looks pretty exotic.

Just hypothesizing a ham who is indeed capable of 13+wpm but still
refuses to meet you in the CW portion of the band because he doesn't
want to QSO with the likes of you. :-)

Not just an opinion, Larry, but a fact based on personal experience.
Like any other license I possess, the worth of the license is in the
privileges granted. Any worth beyond the privileges granted is just
a wet dream.

From Webster's: "talk - 8. to communicate ideas by means other than speech, as
by writing, signs, or signals."

Is English your native language, Dan?

> good you are"...(SNIP)

I am surprised you got into this, Phil.

I have no qualms about ANYONE changing jobs, regardless of whether it was
a personal choice or mandated by market forces.

I have several friends who have had several "careers" since we left high
school...Not because they are unable or unwilling to keep a job, but because of
the same market forces you cite, or just a desire to experience a wide breadth
of interests.

Do you not know any bretheren lawyers who have practiced different types
of law as thier interests changed or as the need arised?

My point is that His Royal Hindass finds it necessary to belittle others
over thier choices or changes, yet when he cites HIS "CV", it is riddled with
changes and holes.

His usual "Do As I Say, Not Do As I Do" rhetoric, Phil.

By taking his "side", you are acknowledging that behaviour as acceptable.
Do you assert that that is acceptable, Phil?

Look angel if your gonna troll at least sound reasonable.

If the Titanic had a satellite link, and all other things being the same, it still would have sunk and killed so many folks.

Other than that I agree. PSK31 works well.

But just because something works is not a reason to discard something else.

I cannot tell from the way the sent characters and spacing come out whether the
operator on the other end is copying with the computer program or by ear.

How do you tell?

So they are saying and doing things to make sure that everybody else involved in ham radio is upset, too? Do they really think that stirring the pot and turning ham against ham is good for the Amateur Radio Service?

And, by my count, it is far from several hundred thousand; on this forum, I see maybe a half dozen that feel so badly about the changes in ham radio that they want to piss on it and everyone in it that doesn't also want to piss on it and everyone in it.

Pretty sad, actually, that some old timers have come to this.

>> But you apparently expect others to, eh?
>
>If you've been told they're illegal, what's to check?

I have never been told that someone is operating illegally while they are in QSO with me. When do you think I was told that?

>Your ethics would have me talking to both all day long.

Not at all, Brian; my ethics would prevent me from obsessing about it on a public newsgroup.

>> >You and Dave say YES to both questions!
>>
>> No, I have not said YES to both questions, Brian.

>You keep me guessing with an unclear answer that I've asked you to clarify,
>but won't. You did, however, post a lot of words.

My answer was quite clear, Brian. It has never happened to me. Your getting "yes" from that is either disengenuous or demonstrates very faulty thought. Which is it?

>I asked what WOULD you do. You said:

>1. it never happened to you and ignore the question

I can think of many things in life that I cannot tell you what I would do until confronted with the situation, Brian. Would I run into a burning building to save a trapped child if I felt there was a chance I would not get out? Until faced with that one, I don't know what I would do.

>Here's you chance to clarify.

It has never come up in my life before, Brian.

>> Another delusion, Brian; I didn't question your reputation.
>
>You questioned my integrity.

Getting "yes" from my answers does not demonstrate integrity. I am not sure what you think questioned your integrity, but you probably got it the same way you got "yes" out of my saying that it has never happened to me.

>> Must be more "What was said; what Brian heard" sorts of things.

>Well there you have it!

No, Brian, there YOU have it. If it comforts you think that you now have the answer to your question from all of this, you can "have it" all you want.

>Cronyism.

Yup, new obsession.

Make that two kooks...

> While I have no specific
> sources to quote, most publications put the number of "licensed"
> CBer's at approx. 20 million during the height of the "craze."

Before the gas crises of the 1970s, the cb license population
stabilized at around 800,000. By 1977 FCC had issued approximately 10
million cb licenses.

See:

http://www.qsl.net/ecara/wayback/page32.html

for more detail on this. The end of cb licensing, regulations against
ham linears, Class E cb, Jack Anderson, and more, all in a very short

time.

> Now,
> given the popularity of 11-meter "hobby" radio, I have no reservations
> of reducing the "craze" population by two-thirds or even
> three-quarters.

I would say it has been reduced far more than that. 1977 was 25 years ago, and there hasn't been a gas crisis of any magnitude since then. In fact, gasoline prices are not much more now than in 1977 - imagine the real cost once you adjust for inflation.

cb was a fad in the 1970s, like disco. It's still out there, but not at anywhere near the level of those days.

> Add to this the number of truckers who use the CB
> along with other non-hobbyists, and I'm quite comfortable that that
> number stands up quite well. (That's not even counting non-US 11-meter
> ops.)

I have to disagree, Bert. Even if the number was significantly more than 10 million, there's no way to correlate that peak to the number of users today unless there's some reliable current information. With no licenses, that job is more difficult.

Some possible indicators are the number of cb sets sold in the USA in a recent year, and circulation totals of cb magazines.

> Now, while you may not see as many CB antennas in your area...I still
> see a good amout in my travels.

It may be a regional thing. It used to be very common to see cb antennas on cars and homes around here. Now it's a rarity. I can understand the house antennas becoming less visible, but you can't hide it on a car.

> I personally use my 80-meter doublet

Law of unexpected consequences. Happens all the time. One wonders what would have happened if the Class E cb thing had actually come about.

> Of course, I'm
> joking Jim. Just having a laugh and injecting some levity into the
> situation.

Yup - but there's a serious bit of truth in there.

> Type 11-meters into your favorite search engine and tell me
> if six to seven million seems terribl exaggerated.

I'd say maybe one million cb users, tops. That includes freebanders using the part of the spectrum near 27 MHz. Just a WAG, but so are all the other numbers presented so far.

> If so let's back it
> down to say, two and a half million. Hey, aren't there only approx.
> 680,000 licensed US ARO's. Who'd-a-thought?

Yup.

Here's a thought for you: There are probably MORE US hams using CW today than back before WW2.

Fortunately it's a slow grower but it is gaining ground. Were you out of touch with reality back in the 60's in your hippie days? You must have found some a little later, if so. Because someone is out of touch doesn't mean they must stay in that condition forever.

I suppose so...but that isn't germane to the subject, is it?

The whole point of the "DEFUNCT" crowd is to crow about something totally dead and extinct...except one can't mention beloved emotional icons "Collins" or "Heath." :-)

Heath/Zenith makes a nice little set of door chimes, mostly wireless, many decors and sound possibilities, plug-in or stand-alone battery powered. The Heath/Zenith marque is owned by a larger corporation in the southeast.

Nobody rings my chimes like the "technical experts" in here who have memorized the ad content and phrasing of ready-built ham equipment but think that electronic rocket science is demonstrated by knowing something more difficult than Ohm's law. :-)

> are coded.

Typically, you regard all who have received credit for a code test as
"coded" however wrong that is. And it is. Over the years many have
scammed the system to get that credit. Until fairly recent times FCC
didn't even require ID of ham radio applicants. Some bold folk even paid
someone who could copy CW to go take the test for them, including the
written. Most every oldtimer, and lots of young timers too, knows of
someone who went away and came home with a General ticket while he
couldn't copy a character of code. Very few were caught, most were not.
So your point, like most of yours, is lame. The numbers of those jokers
you refer to is almost certainly smaller than the number who scammed a
ticket.
Nope, no proof. You don't have any either.

The larger point is that you don't see any of that trash on the CW
bands. If those "coded" hams were operating CW they wouldn't be involved
in that garbage.

OK, Dick, please lay your definition of "coded" on us. My definition is anyone who can send Morse code by hand and receive Morse code by ear. Proof that someone can send/receive Morse code is the Morse code test. If that proof is good enough for the FCC, why is it not good enough for you? Please estimate the percentage of hams who got credit for a Morse code exam and are not coded. And please prove that those hams tend to congregate on 3.950 MHz. From the listening I've done on 3.950, I would say those hams are virtually identical to you - impolite, mean spirited, and close minded.

That's wayyyy too subtle, Cecil. :-)

The average PCTA in here can't distinguish subtlety due to the
overwhelming emotional bias for code.

$150 + $7 shipping and handling gets anyone a copy of all the
articles in Ham Radio Magazine for its 22 year history. Folks can
then make all the personal reprints they want from those CDs
which are available from the ARRL.

They "don't exist." They are "dead," "extinct." Nothing in them
applies to amateur radio, all according to certain PCTAs. :-)

They aren't "Collins Radio" of Iowa anymore. They were purchased
by Rockwell International some time ago.

I'll ask again, WHAT AMATEUR RADIO PRODUCTS are currently
being manufactured by Rockwell Collins?

>> By the same associative logic you will want to use, a

>> Collins assembly line, specifically marketed for ham radio.
>
>Doesn't matter. They're still in business unlike "Ham Radio" magazine.

The Ham Radio Bookstore was purchased from Communications
Technology, Inc., and is still in business and advertised in CQ.

Part of Ham Radio Magazine (that was sold to CQ) became
Communications Quarterly and that merged with QEX. Are you
saying that QEX is now "defunct?"

"Defunct" is defined as "dead, extinct." If Ham Radio Magazine
is "dead" or "extinct," why are expensive CDs containing all their
articles in 22 years of existance resold by the ARRL?

Are you saying the ARRL is also into "radio archaeology" activity?
:-)

>> WHAT AMATEUR RADIO PRODUCTS does Heath make?

>point but as of now, they're still alive...unlike "Ham Radio" magazine.

Heathkit Educational Systems DOES NOT MAKE HAM EQUIPMENT.

As far as amateur radio equipment is concerned, Heath is DEFUNCT.

>> I'd say, by the Word of Extras, that the DEFUNCT kind of logic
>> makes Heath and Rockwell Collins DEFUNCT insofar as
>> the amateur radio business.
>
>I'd say that you need some work on your linguistics.

Oh mighty extra, are you now an amateur expert on linguistics?
[more likely linguini...]

You show me NEW amateur radio equipment or ham radio kits
made by either Rockwell Collins or Heath Company and I will
retract many of my words. Not a problem for me. But you have
a great big amateur extra problem with being defunct.

As far as new ham equipment is concerned, Rockwell Collins
is DEFUNCT.

As far as new ham equipment is concerned, Heath Company
is DEFUNCT.

>> What outlet carries NEW amateur radio products from
>> Heath or Rockwell?
>
>It doesn't matter. They're still in business--unlike "Ham Radio"

>Radio"?

It DOES matter. In which ham radio store can you buy newly-
manufactured "Collins" or "Heath" ham gear? I can't locate a single
year 2002 Collins KWM or even a year 2001 Heath SSB transceiver.

to
>have said that you actually painted grafitti on his car.

How do you know if it would have improved the appearance of the car?

What does a car have to do with it?

Is it for mobile ham radio operation?

Is there an "official" paint scheme for mobile ham radio operation?

>Be careful of what you build up in your mind about these things; some people
>have reasonable memories and can recall exactly what was actually said.

Ah, yes, good old Google. :-)

Guess who will want everyone to "live" in the Google archives to
prove that they were "offended" and are truly Words of Extras. :-)

True

>The FCC will have to issue an NPRM, go through a comment and reply comment
>period and then make a decision.

Are you sure the FCC must go through the NPRM process, Ed? Did FCC do that when the sending test was waived (1977) or when the RFI exposure rules were put into effect (mid-90s)?

Seems to me that FCC went over the whole codetest issue with a fine-toothed comb back in 1998-1999. They asked for, and received, all sorts of input on the subject, and their conclusion was that there was "no regulatory purpose" to continued code testing other than compliance with S25.5.

Has FCC changed their mind on this? If so, it hasn't been made public. Without S25.5, it's logical that the FCC would simply waive Element 1, since they think that without S25.5 there is "no regulatory purpose" to keep any code testing.

>That process could be long or short.

I'm betting on short. Very short. Particularly since there will be at least one petition before the FCC to dump Element 1 as soon as S25.5 goes away.

Is there any legal requirement for an NPRM to remove Element 1 after S25.5 is gone, particularly given the fact that the subject was thoroughly reviewed by the FCC in 1998-1999?

>>Good thing a technician class gives enough band access for experimentation.

All amateur operating privileges above 30 MHz. In fact, the 6 meter band (just one band!) offers more spectrum space than all 9 amateur HF/MF bands.
>
>I look forward to seeing the results of your experimentation published
>somewhere.

That process could be long or short. I'm not betting on short.

Nice snippage of everything pertinent in my post so as to make yours
appear accurate. Old trick, won't work.

My definition is
> anyone who can send Morse code by hand and receive Morse code by ear. Proof
> that someone can send/receive Morse code is the Morse code test.

And what did I just say? There have been lots of hams who received
credit for code tests they didn't actually take. So again you come up
lame.

Please
> estimate the percentage of hams who got credit for a Morse code exam and are
> not coded.

Judging from 8 years of administer easy CW tests as a VE the number is
still undefined but can easily be said to be PLENTY.

And please prove that those hams tend to congregate on 3.950 MHz.

CW ops sure don't congregate there, now, do they? Nor elsewhere the
garbage is found on the bands.

> From the listening I've done on 3.950, I would say those hams are virtually
> identical to you - impolite, mean spirited, and close minded.

Shows how little you know about me. I can readily believe you were
looking in the mirror when you spewed that one.

I don't believe in giving ham tickets away. Seems a certainty you do.

I recently sent a chap in Manhattan an old issue that had his picture
on the front cover from the early 80's. I don't know what compelled me
to drop him an e-mail to see if he was interested, but it turned out
that he'd lost his copy. I was all too glad to part with a piece of my
collection to make this fella's day. :-)

> > I'm

My XYL has some stronger terminology for husbands who receive heavy
bundles of "ancient magazines" in the mail..."you didn't pay allot for
these, did you?" Yet the same XYL left my first 10-80 rig under the
Christmas tree along with a Vibroplex straight key. The card on the
straight key read "For this price, you'd better learn Morse!"

> at anywhere near the level of those days.

I'll go along with most of this. However, CB has definitely morphed into a pseudo-hobby band. I'll leave the debate about the fact that this was not the original intent alone. It is what it is now. Sure, there are lots of lids there...but there are lots of good folks left too. Unfortunately, the lids "squeak" the loudest and get most of the attention. :-(

> > Add to this the number of truckers who use the CB
> > along with other non-hobbyists, and I'm quite comfortable that that
> > number stands up quite well. (That's not even counting non-US 11-meter
> > ops.)

In another USENET thread, I recently read that there are currently over 2,000,000 active OTR truckers in the US. I've rarely ever seen a OTR truck not equipped with 11-meter CB gear. (Or AR gear that transmits on the CB.) I'm not sure how true this is? I suppose it can be verified via the DOT. Although they do not share the same interest as their "hobby-minded" breathren, their electoral and economic might would be a plus.

> I have to disagree, Bert. Even if the number was significantly more

> no licenses, that job is more difficult.

Agreed.

> Some possible indicators are the number of cb sets sold in the USA in
> a recent year, and circulation totals of cb magazines.

Unfortunately, many of the rigs that are in use on 11-meters are modded AR gear. In actuality, many of these rigs are designed with 11-meters in mind and once enabled...run cleaner than the type-accepted stuff. I don't know whether to curse that guy running a AR-3500 or FT-840 @ 30w on the "legal 40" whose NOT causing me any TVI/RFI or the guy running the stock Kraco whose wiping out evrything within a three house radius. <ggg> Of course, I know the correct answer. Just joshin' around.

> > Now, while you may not see as many CB antennas in your area...I still

> It may be a regional thing. It used to be very common to see cb
> antennas on cars and homes around here. Now it's a rarity. I can
> understand the house antennas becoming less visible, but you can't
> hide it on a car.

This is one thing that I'm fairly certain of. Over the past 20 years
or so, the CB has gone from a primarily mobile service to more of a
home-based one while AR has made some really significant strides wrt
"going mobile." (...as well as portable.)

> > I personally use my 80-meter doublet
> > as it's convenient to just use another input to the tuner for the CB,

> > GREAT towers!) The trick is not so much how many are there as is how
> > to get them all to pull on the same side of the rope?
>
> 'zactly.

Tough and frustrating to get the 11-meter folk to see that they could
really have much more control over their own destiny if they'd clean
up their act (Even a little.) and leverage their economic and
political might.

> > Jerry's idea is
> > one of the few that actually has a shot-n-heck at accomplishing this.

>
> Law of unexpected consequences. Happens all the time. One wonders what
> would have happened if the Class E cb thing had actually come about.

Quite true. However, while I try to set an example that there are
still courteous professional ops on 11-meters, others still shoot the
band in the foot. My thinking is this. Now that I'm an ARO...if I (Or
like-minded folks.) were to completely abandon the CB, then those who
say that the CB contains only lids would be correct and win. I prefer
to remain living proof to the contrary as well as try to exert a
positive influence on those I QSO with.

I like that stat. Lets hope the ITU folks like it in 2003 too. :-)

> > Take care now. :-)
> >
> Roger that!

Wanna hear a funny? I parked the rig on 27.3850 LSB while I was doing some paperwork and realized that I was hearing ops going QSX when they were "on the side" and QRT when they were clear. You've no idea how good this actually made me feel. While the "QRT and on the side" thing was a personal peeve of mine, I've never given anybody a hard time over it as long as I understood their meaning. I personally talk on both the CB and AR as if I were just conversing with the other op in person. Take care and thanks for the nice discussion. :-)

Though the correctness of this one person seems to not be in question
since the regulations at the REF Union web site, in particular

http://www.ref-union.org/Documents/B/B0-01.html

seem to agree. While the frequency table formatting is screwed
up by 6 lines or so on my browser, the text says the 6m band limits
are 50.2-51.2 MHz in Region 1, with power limited to 5 or 100 Watts
depending on where you are in France.

>>Then why complain to me?
>
>Then why are you complaining about all this here instead of to the French

Please quantitize "PLENTY" as a percentage of total hams. Your answer will,
no doubt, expose your paranoia problem.

> And please prove that those hams tend to congregate on 3.950 MHz.
>
> CW ops sure don't congregate there, now, do they?

That's because 3.950 MHz is not in the gentleman's agreement portion of
the CW band. I have no evidence, one way or another, that those bad boys
are not CW ops when they are not operating SSB. In fact, they act on the
air very similar to the way you act on r.r.a.p.

> > From the listening I've done on 3.950, I would say those hams are virtually

Actually, those guys seem more honest than you, Dick. You are allegedly
impolite, mean-spirited, and close-minded only here on r.r.a.p while
they are presumably consistent both on the air and off the air.

Uhhhhhhh Dave, one can always request reprints that don't even exist.
In fact, one can always request anything whether it has ever existed
or not. I have requested that my pastor show me some proof that God
has ever existed. So far, all he has offered is an argument that
first assumes that God exists, i.e. if God didn't exist, where did
all this come from? I respond, if all this has to have a cause, it
means that you believe in first cause. So given that you believe in
first cause, what caused God? What caused the cause of God? What caused
the cause of the cause of God? ...

I have a full cabinet full of back issues of "Ham Radio" and "HRH", Len.
Nobody is dumb enough to believe that when a magazine publishing company
is gone that the back issues evaporate. The business which published
the magazines is defunct.

You are certainly giving Brian a run for the gold medal.

Naw, this is one of those things where you have to define your mission
and attack the real problem. Brian hasn't done that yet.

Rockwell Collins produced ham gear.

> I'll ask again, WHAT AMATEUR RADIO PRODUCTS are currently
> being manufactured by Rockwell Collins?

Irrelevant. The company is still in business as Rockwell Collins.

> >> By the same associative logic you will want to use, a

> Oh mighty extra, are you now an amateur expert on linguistics?

> [more likely linguini...]

It would appear that I can use the term correctly. You seem to be
having trouble with its meaning and connotations.

> You show me NEW amateur radio equipment or ham radio kits
> made by either Rockwell Collins or Heath Company and I will
> retract many of my words. Not a problem for me. But you have
> a great big amateur extra problem with being defunct.

The companies are not defunct. They are still in business. I've never
claimed that they continue to produce amateur radio equipment. You have
claimed that "Ham Radio" magazine is not defunct. You're wrong.

> As far as new ham equipment is concerned, Rockwell Collins
> is DEFUNCT.
>
> As far as new ham equipment is concerned, Heath Company
> is DEFUNCT.

...and as far as amateur radio is concerned (wait for it)....YOU'RE
defunct (using of course your variation on the connotations of the
word).

> >> What outlet carries NEW amateur radio products from
> >> Heath or Rockwell?

> year 2002 Collins KWM or even a year 2001 Heath SSB transceiver.

It doesn't matter. I've never claimed that those companies currently
produce amateur radio equipment. On what newsstand can I find the July
2002 issue of "Ham Radio". Stumped?

>effect (mid-90s)?

I don't know what happened in 1977, but the RF exposure rules went through the whole gamut, including petitions for recon by ARRL (mostly successful).

>Seems to me that FCC went over the whole codetest issue with a fine-toothed
>comb back in 1998-1999. They asked for, and received, all sorts of input on
>the
>subject, and their conclusion was that there was "no regulatory purpose" to

Yes, but they deliberately chose not to include a sunset provision that automatically deleted the code test once S25 was changed.

>Though the correctness of this one person seems to not be in question
>since the regulations at the REF Union web site, in particular * * *

I am sure that after considerable discussion here on rrap, it is relatively easy to determine after the fact what was right. But how many of us know the operating priveleges of hams in other countries? I sure don't. I presume that hams who contact me are authorized by their governments to do so. How many of us would take the time to find that URL for each of our contacts?

When I operate, I believe I am responsible for my own conduct on the bands. That is enough for me; I don't feel any need to assume responsibility for the conduct of others.

The message rules feature in OE5 can be used to produce some genuinely wierd things.

Some time ago I blocked hotmail because nothing worth reading came of it until Cecil started using it for reasons known only unto him so I went in and modified the rule to turn everything from Hotmail green.

So Cecil is now green. Whether there is still anything worth reading is up to you to decide but I might at some point let Lennie out of the killfile and turn him pink. This may be the most fun I have had on RRAP in months.

Check some of the archives, genius. You'll find that in the Conditional
days virtually every Conditional class ham called to retest by the FCC
either failed to show up for the test or failed the code test. And in
just one case, Jim N2EY just yesterday, I think it was, made mention of
the many Conditionals in the Philadelphia area and noted that it was a
curiously high number given that there was a local FCC office, certainly
not beyond the 175 mile limit. You can bet almost every other metro
area had similiar numbers. How do you suppose they did that? Use the
address of Uncle John way out in the boonies somewhere outside the limit
so as to qualify, later changing their address? Aw, surely not! No one
would work the system like that!
You of all people, system worker extriordinaire, know all about it.
You've told us right here about your own case, which wasn't all that far
off the mark.

> > And please prove that those hams tend to congregate on 3.950 MHz.
> >

So tell us then, what is the CW frequency where such garbage can be
found? You can't simply because there is none.

I have no evidence, one way or another, that those bad boys
> are not CW ops when they are not operating SSB. In fact, they act on the
> air very similar to the way you act on r.r.a.p.

When dealing with a horses a$$es like you and Burke Turkey, one uses
whatever tools are necessary to handle the job.

> > > From the listening I've done on 3.950, I would say those hams are virtually
> > > identical to you - impolite, mean spirited, and close minded.

All because I think hams should qualify themselves to handle CW. Right.
You should know.

> >

>us would take the time to find that URL for each of our contacts?

Actually you are changing the topic a bit. The original topic wasn't
about each of your contacts, it was about what you'd do when a person
told you a large number of people were operating out of band. I personally
find that an interesting enough assertion to look it up, not because I
particularly care (it is the job of the French PTT to take care of such
things, and if they don't care then who am I to be bothered?) but certainly
for its value as trivia.

And, of course, I'd absolutely want to look it up when I saw it on rrap
since I also understand that the people observed operating out of band were
CW operators, and I'd been lead to believe here that CW operators didn't
do stuff like that. I'm now forced to assume that the latter only included
good old red-blooded American CW operators and not those annoying French guys.

>When I operate, I believe I am responsible for my own conduct on the bands.
>That is enough for me; I don't feel any need to assume responsibility for the
>conduct of others.

Sounds like a fine plan to me.

Bert, many year ago (in the early 70s), I worked with a CBer. We were (and still are) good friends. I was trying to induce him into getting an amateur license (both of us had our 1st class radiotelephone tickets). He stated something about CW to which I responded (deep, athouratative voice here), _... ..._ _ .. _ .. ... . ._ ... _.__ (end msg). I sent that at around 20 words per minute. He responded 'I know it is easy, but I'm not interested!!!!!!!!!! Well, blow me down! It turned out he was a high speed CW operator in the service during WWII.

Curious as to your comment ...

>Again, obvious nonsense.

No, it's obviously true. You just don't like the ARRL for some reason. Probably it's because their books are both good and inexpensive.
>
>If the ARRL "wanted peoble to buy their publications via retail
>outlets," why would they have them for resale through headquarters
>in Newington?

The idea is to maximize the availability of the product. Those who prefer mail order can get publications direct from Hq, either by mail or online. Those who would rather buy from a store can do it that way.

ARRL also has a booth at most hamfests where publications can be bought directly, avoidingshipping.
>
>How many "retail outlets" for amateur radio equipment are there in
>the USA? [ask K0HB]

You ask him, if you really want to know.

However, there are over 200 stores selling ARRL publications in the USA. The ARRL website has a store locator, identifying retail stores that sell ARRL publications.

212 that sell ARRL publications, according to the locator.
>
>There MIGHT be an urban amateur radio retail outlet to SOME folks
>within around a two-hour driving distance, but that isn't true even in

>the 48 contiguous states of the USA.

How do you know? Have you done research on all the stores in the locator?

You can put in a zip code and it will tell you the stores selling ARRL publications in a 20, 50 or 100 mile radius. Or you can search by state. There are three stores within 20 miles of my location, and one of them is in sales-tax-free Delaware. Gotta luv it.

That's nice. Is that a suggestion? Why don't you write it up and send it to Hq?
>
>Amazon is still a profit-making business.

HAW! That's a GOOD one!

Check out:

http://biz.yahoo.com/fin/l/a/amzn.html

and

http://biz.yahoo.com/fin/l/a/amzn_ai.html

Amazon is losing money at a tremendous rate, and has been doing so for years.

For example, consider the last four quarters:

Quarter ending Mar 31, 2002: On total revenue of $847,422,000, the net income
applicable to common shares was a NEGATIVE $23,150,000. (That's a loss).

Quarter ending Dec 31, 2001: On total revenue of $1,115,171,000, the net income
applicable to common shares was $5,087,000. Profit of less than one half of one
percent.

Quarter ending Sep 30, 2001: On total revenue of $639,281,000, the net income
applicable to common shares was a NEGATIVE $169,892,000. (That's a loss).

Quarter ending June 30, 2001: On total revenue of $667,625,000, the net income
applicable to common shares was a NEGATIVE $168.359,000. (That's a loss).

The annual numbers are equally gloomy. Big losses in 2001, 2000, and 1999.
Heck, in 2000 Amazon LOST over 1.4 BILLION dollars on total revenue of 2.761
billion.

Total revenue for the three years 2001, 2000 & 1999: $7,524,255,000
Total Net income for the same period: NEGATIVE $2,698,518,000

The stock price has fallen from over 100 in late 1999 to about $16 today. There hasn't been a dividend since at least 1999. Total market capitalization is 5.851 billion dollars.

Amazon should take some tips from the ARRL. The League isn't losing more than 33 cents on ever dollar's worth of sales.

> As far as I know, they
>are NOT a political action organization.

What's your point?

>They resell books and other products.

But they don't produce said books. ARRL does.

>NO SHIPPING CHARGES means they managed
>to stay in business, making a profit, all the while absorbing those
>high shipping charges plus their "burden" (bean counter talk for
>the overhead of plant and equipment and all other miscellaneous
>business costs).

You're mistaken - big time. Look at the financials. They are NOT "making a profit" by any stretch of the imagination, unless you look at "gross profit" and ignore the rest of the costs on the income statement. The balance sheet is even worse.

Part of the problem is that they are carrying an enormous debt burden (interest charges in 2001 alone were over 139 million). But even if their debt were wiped out, Amazon would still have lost money because their cost of doing business exceeds revenue.

The facts are there for all to see. Show us where Amazon is "making a profit, all the while absorbing those high shipping charges plus their 'burden (bean counter talk for the overhead of plant and equipment and all other miscellaneous
business costs)"

C'mon, show us where the profit is. The shareholders sure aren't getting any of it.

>The ARRL will copy individual article pages in QST for the low
>price of $5 per page ($3 per page to members). Wow! Do you
>consider that "inexpensive?"

Nope. Cheaper to just buy the applicable QST CD-ROM. They're about $40 each. Each CD-ROM holds 5 or 10 years of QST. Big discount to buy the whole set. I'm actually thinking of selling my QST collection and getting the CD-ROMs.

Or just find the old mags on eBay or at a hamfest. That's how I built up my collection, since I've only been a member since 1968.
>
>>ARRL membership has never been more than about a third of US hams. So what?

>>Check out JARL membership as a fraction of Japanese hams - pitiful.
>
>This isn't about Japanese radio amateurs.

You keep mentioning the ARRL membership percentage. Is there a point to that?

>My comment was on the
>high "shipping charges" of the ARRL.

You also mentioned the ARRL membership percentage.

>>What was the peak circulation of the magazine 'Ham Radio' in its heyday, in
>>total numbers and as a percentage of licensed hams at the time? What was the
>>average over the 22 years of its existence?
>
>Misdirection in trying a different sub-thread. Bad form.

Not misdirection. A simple question. You derided a current, nondefunct magazine
that has published an article by me as a "high priced fanzine", but we don't
see any hard data on "ham radio" magazine.
>
>Ham Radio Magazine and its spin-off Ham Radio Horizons, were both
>INDEPENDENT amateur radio related periodicals.

Yup. When introduced in 1968, a year of HR was $5. ARRL membership was $6.50.

What does that have to do with the question? What was HR's circulation? What
percentage of then-licensed hams subscribed?

> They were not
>membership magazines and kept in business solely through
>advertising sales.

What's your point? ARRL membership pays for a lot more than a magazine. It
would seem that simply publishing a mag is an easier, lower cost task than
running a membership organization with a field organization, representation in
Washington, a Headquarters with lab and memorial station, etc.

>Communications Technology, Inc., never tried nor
>represented itself as an amateur radio membership organization.

So? Is there a point to all this? Back in '68, ARRL managed to publish QST and
do all of the other things for just $1.50 more than HR charged for a much
thinner mag alone.
>
>QST is a MEMBERSHIP MAGAZINE, so said in capitals because
>so few understand the difference between that and an independent.

Doesn't answer the question. What percentage of all licensed US hams are
members of NCI?
>
>There has NEVER been ANY statement from the ARRL saying
>it would dissolve for any reason.

Why should it? ARRL is not a single-issue organization.

> Indeed, it's been quite an
>opposite continuing set of statements and pleadings to join them.
>:-)

Sounds like you want the ARRL to just go away. You'd like that, because the ARS
in the USA would be left without a strong national organization.

It is interesting to note that Lenover21 does not offer solutions to problems
but simply says how things should not be. One does not get things done by
saying what shouldn't be done.

Lenover21's analysis of the ARRL is as faulty as his understanding of the
"profits" of Amazon.

Ed:

Sooo, then, you're saying that if I had found someone's ham ticket lying on the ground back in 1981, that I could just put it in my wallet and start operating on-the-air, using it as a valid authorization to operate on the ham bands?

Keep in mind, if your answer is anything other than "Yes," then your example *was* irrelevant, wasn't it?

>
> I've got oa disagree, Larry.

Dick:

You're always free to disagree with me, but in doing so, you're proving
my point.

>As a VE of several years, I saw a lot of
>hams pass the 13 wpm test that were not anywhere near capable of using
>it on the air. Most of them, in fact.

That's *always* been the case, Dick.

>But they got the experience and drill of learning it to some useful level.

Exactly my point.

>That's about all you can
>expect from licensing at that speed with the tests in use. The hams who
>find CW interesting and fulfilling enough to go on to real proficiency
>will do it anyway.

As they always have, but what percentage of all hams will do so now
that the maximum code testing requirement is 5 WPM, as opposed to
when it was 13 for General and 20 for Extra?

>But for the most part, only if they learn it for
>licensing. From long years of field experience I'm convinced not many
>will do it otherwise.

Of course they won't -- which is why I have been arguing that the licensing
requirement is what creates CW operators on-the-air -- not some "sales
pitch" in which hams are indoctrinated into learning the code for it's own
sake. Regardless of the merits of CW, people just won't learn it without
the "incentive" that existed in the Pre-Restructuring Era.

> It's sort of like me not ever spending the time and concerted effort to
>learn the Smith Chart.

[snip]

Agree with your comments re: the Smith Chart. However, if learning it
to a useful proficiency level had been a requirement, I'm sure that you
and I would have fulfilled that requirement. The written exams I took
in the early '80's only required a basic awareness of what a Smith Chart
was, not the ability to use it to solve actual antenna design problems.

Well, that's going to happen anyway.

>But I am
>above that and I will embrace every facet of the ARS.

"Every facet of the ARS?" Does that include Morse/CW at a speed
greater than 5 WPM?

>I may not be able to
>copy and send CW over 5 wpm, but there is more to it than that.

As I said earlier, you certainly could, if you put the effort into developing
that skill.

>Digital
>modes, such as APRS, Packet and PSK-31, are up and coming modes in the
>Service today.

All of which I use and enjoy, in addition to CW. How about let's set up
a sked for a Hellschreiber QSO?

>Emergency Communications, especially in the wake of Sept.
>11th and the raging fires in CO and AZ, played a key role in helping cope
>with the aftermath that this country endured. Could 13-wpm CW have filled
>the needs for message handling to the variety of relief services that were
>involved?

As a matter of fact, yes, it could!

>How many people at the Red Cross, Salvation Army, local law
>enforcement and fire departments know 13-wpm CW?

Not many, probably -- but they don't need some "amateur" to come in
and operate push-to-talk voice radios for them, either.

>Just because I don't use a
>keyer doesn't make me any less of a Ham.

Of course it does. You don't see it, but you wouldn't, because it doesn't
serve your interests to do so. Sorry for the reality check.

> And you have an apparent ability to judge people based upon some rather

>shallow criteria.

Mike:

The fact that you consider code testing to be "shallow criteria" is only
your opinion. It is not the facts. The code testing requirements of the
Pre-Restructuring Era brought about a significant number of hams who
were capable of effectively employing the Morse/CW mode, thus able
to exploit it's well documented benefits and advantages. This ability will
now eventually diminish in the ARS, and could eventually be lost, due to
the lack of incentive for prospective hams to learn the code to meet the
testing requirement. I do not consider this to be "shallow criteria."

>As you may recall, when someone was once disparging
>your occupation, I came to it's and your defense, noting the
>responsibility and serving the general public good. Isn't it awful when
>someone is can make judgements on you on the basis of such shallow criteria.

I recall that, and thank you for your support at the time, but we're on a
completely different subject now.

> It's probably better to judge people based on their actual
personalities
>and abilities than something as simple as the ability to send Morse
>Code, or what you consider to be a dumbed down tesating process.

I don't just consider it to be a "dumbed-down (testing) process," it is one
in actual fact. The testing requirement which traditionally led to the
development of a valuable communications skill is now reduced to the
point of insignificance, and will undoubtedly be eliminated totally in
the foreseeable future. Post 4/15/00 hams can now be directly compared to
those
who acquired their privileges under a more challenging and comprehensive
set of requirements, and they will not compare favorably unless and until they
voluntarily acquire CW proficiency at 13 - 20 WPM. If you're not going to do
this, then you're choosing to ignore a valuable communications capability, and
thus, aren't up to snuff as a ham -- compared to those who have this ability.
I'm

not saying that this makes you a bad person, I'm just saying that it means that you're lacking something fundamental as a ham. If it's any comfort to you, you've
got plenty of company!

> Frankly, you remind me of some of those 10-10 people that you purport to
>loathe. You are ready to cast judgement on a person based on a criteria
>which is just plain irrelevant.

As I've already stated, I don't consider the criteria to be irrelevant. And, as a
person who has accepted the challenge of learning the code, gaining on-the-air proficiency at it, and having enjoyed it as a major component of my ham radio participation, I am in a much better position to judge the relevancy of this particular criteria than you ever will be. Sorry, but that's just the facts.

Ed:

When did I ever insult anyone for using a keyboard to send CW? Provide quotes, please.

As someone who learned the code and made the majority of his on-the-air QSO's using a keyer/paddle combo, I appreciate code which is sent using electronic character generation. In fact, having been exposed to the "perfect" character formation possible using an electronic keyer, my manual sending is also extremely "clean," since I send "by ear," the same way I copy. By sending "by ear," I mean that I don't grab the J-38 and start tapping out dots and dashes, I create sounds that sound like letters, punctuation, and prosigns. Therefore, the letter "L" comes out "didahdidit" rather than "ddaaaaaahde dit." I have no problems with CW operators using keyboards, since I can "head copy" them much easier, even at higher rates of speed. This probably explains why, during contests, I can copy at 30+ WPM whereas my normal code speed is in the 18 - 22 WPM range.

>
> Is English your native language, Dan?

a matter of fact, it is. From my Webster's reference, I seem to find
'speech' or spoken words to be very much a component of 'talk', as per
below:

Main Entry: 1talk
Pronunciation: 'tok
Function: verb
Etymology: Middle English; akin to Old English talu tale
Date: 13th century
transitive senses
1 : to deliver or express in speech : UTTER
2 : to make the subject of conversation or discourse : DISCUSS <talk
business>
3 : to influence, affect, or cause by talking <talked them into going>
4 : to use (a language) for conversing or communicating : SPEAK
intransitive senses
1 a : to express or exchange ideas by means of spoken words b : to convey
information or communicate in any way (as with signs or sounds) <can make a

trumpet talk>
2 : to use speech : SPEAK
3 a : to speak idly : PRATE b : GOSSIP c : to reveal secret or confidential information
4 : to give a talk : LECTURE
- talk﷽er noun
- talk back : to answer impertinently
- talk sense : to voice rational, logical, or sensible thoughts
- talk through one's hat : to voice irrational, illogical, or erroneous ideas
- talk turkey : to speak frankly or bluntly

1089. 2m Repeater Question

Newsgroup: rec.radio.amateur.policy
Date: 2002-07-10 03:44:41 UTC
From: Dan Finn <djfinn2@bell.net>
Message-ID: <ZUNW8.2658$JU3.250179@e3500-atl1.usenetserver.com>
Source record: 48944

I am not a very active 2m operator but I do notice that most repeaters identify using Morse code at 18 + wpm. Knowing that a sizable fraction of 2m operators are "no code" techs, it is not possible for those users to understand these transmissions. The question becomes, how do no code techs know the call signs of the repeaters they are operating? Doesn't part 97 require amateurs to be able to identify the stations they are communicating with? Should NCT's only use 2m simplex or repeaters that use verbal station id? Comments welcome.

You're right, 136kHz for M3's now !

Limited to say -10dbw of course, so they take No notice of any power limit,
and tell them that BT left an aerial for them to use.
i.e. their neighbours phone line ;-)

Dennis comes through again. First with the CCIT def. of Morse Code, then
the French 6M privs.

HQ Staffers appear impotent to answer radio related questions, even the
simplest "what if" questions.

We of course as hams, will "hit up" our relatives and friends into the hobby, but I wonder of some type of "Amway" style of marketing the hobby to others may be worth a look? I am not referring to selling products like they do, but more along the lines of the structure they use. Of course, the "sellee's" would definitely be prequalified in respect to aptitudes etc.

Just one of those wierd thoughts after being up for more than 30 hrs......

I think the rules say auto-ID should not exceed 20 wpm

>Knowing that a sizable fraction of 2m
>operators are "no code" techs, it is not possible for those users to
>understand these transmissions.

A sizable fraction of 2m hams can't copy that speed even if they are Extras.

>The question becomes, how do no code techs
>know the call signs of the repeaters they are operating?

1) Ask somebody who can copy it
2) Look it up in the repeater directory and make an educated guess
3) Some folks know Morse at levels beyond license requirements
4) MFJ code reader or equivalent
5) They don't worry about it

> Doesn't part 97
>require amateurs to be able to identify the stations they are communicating
>with?

They don't communicate "with" the repeater, they communicate "through" it.
Don't have to know its callsign unless you're a control op.

>Should NCT's only use 2m simplex or repeaters that use verbal station
>id? Comments welcome.

Sounds like a nonissue, Dan. Some other services use Morse auto ID, but the
users don't all know Morse.

The purpose of the ID is to identify the station to the FCC. Whether they
can copy cw is another issue.

But to answer the question of 'how do they know'. Learn Morse Code.

See how easy that is.

>> Happens to me, too, Dick.

>But you do much better at gleaning what is being sent accurately than
>any computer program I ever saw, and I've checked out s few.

I posted the URL of an EME bounce that was buried in noise. It was NOT QRSS, but sent at about 10 wpm. It was decoded by a computer program. Were you able to decode it better than the computer program?

>> You do not slow down when conditions are poor?

> You're doing it again, Ed. Being disingenuous doesn't become you.

How does one be disengenuous with a question, Dick?

The example I posted was not QRSS; one could think that your reference to QRSS EME was not exactly forthright. Or is this one of those "do as Dick says, not as Dick does" sort of things?

What was the call sign of the EME station buried in the noise, Dick?

73,
Ed Hare,

>Keep in mind, if your answer is anything other than "Yes," then your
>example *was* irrelevant, wasn't it?

My answer is no. However, that only demonstrates that the entire premise that one will value only what one works for is not valid, doesn't it? Or it demonstrates that the premise is not relevant to Amateur Radio. I agree with Cecil; the principle value of the Amateur license is in the priveleges it grants. Would you have gone through all the effort if it didn't get you the priveleges?

writes:

>Well, about 680.000 US hams and no PSK31 from USA on 6m ? Where are you ??

Good question.
>
>3rd millenium is the age of new radio technology, it's time to show to the
>world that ham-radio operators are not only sticked with OBSOLET CW.

No code test is required to get on 6 meters. Been that way since 1991. Yet you
say there is no PSK31 on 6 meters.

>If the
>TITANIC had the PSK31, all the passengers had been probably saved.

How?

The Californian was about 10 miles away but did her radio operator was off
duty. Would PSK31 have made him stay up later? Nope.

The ship which did come to the rescue was Carpathia, which was 58 miles away at
the time of the first distress call. Carpathia got the distress message and
headed for the sinking Titanic shortly after after the first distress call went
out from Titanic. But it took Carpathia four hours to get there, by which time
almost everyone in the water was long dead from hypothermia. How would PSK31
have made Carpathia go faster?
>
>There are nice softwares like WinpskSE, use it !

Who are you to give people orders? Do you tell people what they should like and
not like?
>
>There is a lot of PSK31 on 10m but very very few on 6m.

Morse code test is required for 10 meters but not 6 meters. We were told that
dropping the code test for VHF/UHF would attract large numbers of hams who
would use new modes. But you say there's no PSK31 on 6m.

Interesting.

> Hurry US guys, call
>Europe in PSK31 !

There are over 640,000 US hams with full 6m privileges.

>We listen to you in PSK31 between 50.250 and 50.280 MHz.
>TNX

Keep listening...

So what? Total project cost is the issue.
>
>You need ICs? Digi-Key, Newark, Allied all have them at low
>prices for small quantities. There's too many to pin down for
>examples but that can be done

Total project cost. How many transceivers, Lenover21?

> (I could quote logic devices off the
>top of my head but the PCTAs don't believe in digital circuitry so
>it would be wasted effort).

Untrue.

Back in 1975 I desined and built a diital dial adapter using TTL ICs. Would
work with almost any HF receiver. Pretty advanced for the time.
>
>>Add to this the price of special
>>tools and test equipment, and even simple projects become expensive.
>
>Ohm my, a trusty Simpson 260 doesn't cut it by itself? :-)

How many transceivers?
>
>If you want everything in a hobby to be "simple projects" then
>content yourself at building tuna-tin transmitters and that good
>old standard, the regenerative receiver using a single tube! :-)

I've built those. Also multiconversion receivers, heterodyne transmitters,
transceivers, and all sorts of other stuff. How much have you built as an
individual home workshop constructor?
>
>Maybe QEX should cease publication because all these things
>with states of the art past 1962 are "complicated?!?"

You ever build anyhting?

What ARE you going on about?
>
>>The parts cost issue is not a new thing. It is one of the main reasons for
>>the success of Heathkit.
>
>True for 1962.

True today.

>By 1972 Heath Company was starting to feel
>competition from the ready-builts in some electronic areas. By
>1982 the competition was definite and sales began sliding for
>those vaunted kits.

That was true for ALL consumer-type electronics. Competition from less
expensive forein manufacturers. Heathkit could not compete with Sony,
Panansonic, Kenwood, Yaesu, Icom, etc. Most American companies could not.
That's why they became defunct.

>Sorry, but for MOST of the kits from Heath,
>the DESIGNS were also cheap and they were not the optimum
>in performance or accuracy when compared to the ready-builts of
>1982.

Give us some examples.
>
>The Heath Company KIT in ham radio is DEFUNCT.

Yup. Just like HR magazine. Old ones are valued and restored, but no new ones
are being made.

>The same for
>color TV. The same for test equipment. The same for marine
>electronics. DEFUNCT.

The company that makes them is defunct, yes. The equipment survives, just like
old magazines.

>All you have left is an emotional surge of nostalgia that NTIS cannot
calibrate.

Like your nostalgia for 1954?

Is there something wrong with using older technologies?

>>More than 40 years ago, it was cheaper to buy a Heathkit
>>than to build an equivalent device from new retail parts.
>

>Well then, Mr. Who-Do-You-Know-Who-Designs-His-Own-Station
>you just hang in there with your Elecraft KIT that you builded all
>by yossef with your hot little solderin iron.

That's one of my stations. I have other amatuer radio equipment that I built and designed myself. Do you?

> Did you DESIGN it?

Of course not. It was cheaper to buy the kit.

Tell us how many amateur radio transceivers you've designed and built as an individual, using your own time and resources. I've done three, all multiband HF designs. None were copies of published designs - in fact, I've only done one or two copy-projects in my life.

>Check some of the archives, genius. You'll find that in the Conditional
>days virtually every Conditional class ham called to retest by the FCC
>either failed to show up for the test or failed the code test.

What percentage of those tested at 13 wpm before the FCC do you think could pass a 13 wpm test today?

Where are the archives that contain the records of the FCC retests of the Conditional licencees? That happened long before the internet. I am just curious where you went to check them.

>Aw, surely not! No one
>would work the system like that!

Are you saying that ham radio has been ruined since the 1960s?

I am just curious; perhaps one of the historians here can cite the percentage of hams that were Conditionals. Do the archives indicate what percentage of the Conditionals obtained their licensed by giving Uncle George's address?

This style of discussion will almost always lead to hard feelings and
serves no useful purpose.

> I've learned an important lesson here...not to argue with narrow-minded
> people on the Net.

Then don't, discuss it and learn from it. I'll agree that Larry comes
on a little strong but, believe it or not, he's really got your best
interests at heart here. Once you make up your mind to set aside 20
min. or so per day for a few weeks and pass Element 1, you'll be
surprised how the sense of accomplishment can spur you on to "want" to
attain the higher code speeds. I personally liked the ARRL
training/practice CD's. They employ ARRL or "Fast" Farsworth. That is
to say that the characters are sent at approx. 18-wpm, but the words
are spaced out at 5-wpm. It costs a whopping 12 bucks and was one of
the best investments I've ever made. Trust me on this. ;-)

> I'll let Larry live in his own little world there. It's not worth gettin
> frustrated over him.
> He's just been standing a little too close to the spark-gap transmitter
> again.

Again, I realize that Larry's delivery's a tad gruff...but his message
is sincere and well meant. Wanna really be able to tell him to pi$$
off. Do it 6 mos. or a year from now on the bottom of 20 @ 20-wpm.
He'll positively be thrilled to be insulted in this manner.

> And don't bother replying to this, Larry...for I am removing this newsgroup
> and never returning.

Hope not, there's much to learn here.

> So, I guess you win and I lose...does that make you happy and satisfied??

You'll only lose if you sell yourself short. Give it a shot and I bet
you'll be surprised how quickly it'll "fall into place." Best of luck
to you. :-)

> Have fun bashing everyone else.

I still have a few K3LT bruises, but you know what...I'm better for
the wear.

> 73's
> John
>
> QRT

I hope that's QSX. Take care and again, good luck.

Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc,rec.radio.amateur.policy

To show support for _REAL_ Ham Radio, and to show
disapproval for CBers masquerading as Radio Hams.
I nominate Sun 21st to Sun 28th July 2002 as International
M3 Boycott Week.

During this period, no self-respecting Radio Ham worthy
of the name will talk with any M3 callsign.

(This will not cause any problem to an M3, because if she
regards herself as a fully-fledged Ham, then she must so
regard any other M3. Therefore, by her own argument,
if she is limited to talking to other M3's for the week, then
she's still talking to other Hams (But we will know differently!))

Since I don't keep a working sound system on this computer, I didn't
follow your link, and since you did not state anywhere the speed of the
EME transmission, I did as you always do, and assumed it to be the QRSS
mode they mostly use.

I understand that. Your comment on my memory just seems peculiar after
your own lapse. Do you remember everything you've written or said after
several years?

> Have you never used those words?

Certainly.

Actually Brian, that is what you've unsuccessfully attempted with me.
That hasn't worked but you've certainly succeeded in making yourself
look pretty silly.

Sorry to disappoint you Steve but my M3 already covers me for a whole watt
of ERP on 136 kHz, just like your 'A' licence covers you. Ready made rigs
or commercial kits seem to be a bit thin on the ground but one of those
audiophool amplifiers might just work. Hmmmm.......

Liars? I don't think that has been stated at any time during the
several incarnations of this crap. What has been stated is that 1) I
operated where I was permitted to be and that some French hams did not.
2) That you should take the matter up with the French PTT or the REF and
3) That none of it is really your business since you were not an
involved party.

> Thanks Ed, Dave, et all Cronies!

No, Brian. Thank YOU for all of the entertainment whether or not you
fully understand that it was at your expense.

Once again you -deliberately- have it wrong. The "lazy" descriptive is reserved for all the Brian Burkes et al who "Just didn't have time" but had plenty for everything else, and wanted it given to them anyway. The new hams are working under the present license scheme. If you don't believe most of them will avoid learning code past the obligatory 5wpm, and not at all when that is gone, just stick around and see. If most of those who did learn it wouldn't have without the test requirement, it's rather silly to just blithely assume they now will jump to it. But that's rather characteristic of you.

I already have Element 1 done from my days as a Novice. It's not that I
something against CW, but I just never had the initiative to learn 13 wpm.
I didn't get on HF when I first started as a Ham and I didn't feel the need
to learn faster CW. But since this last Field Day plus getting my
"restructured" General ticket, I'm more interested in HF than I was before.
Sure, I could learn to send CW at 13 wpm and I probably will soon. But not
because Larry bullied me into doing it. I just took offense to his remarks
for making a generalzation based upon his bias for "lesser" hams.
```

And after thinking about things, I'm not going to let Larry bully me out of this NG.

Hi!

Here in Cyprus (5B4) we are trying to negotiate with indifferent
authorities to secure the same priviledges with European
Union hams and to keep priviledges we already have, since
some are threatened due to ignorance of the nature of ham radio.

We need information on the following topics at this stage:

1. What are the prospects of the 70 Mhz (4m) band in Europe (and
the rest of the world?) There is no mention of the amateur radio
service in the "European Table of Frequency Allocations and
Utilizations" of the European Radiocommunications Committee (ERC).
All European nations are supposed to aligne with these proposals
and Amateur Radio is not mentioned in the 68.00-70.45 Mhz zone
which is the nearest to 4m.

2. What are the permitted maximum power levels in Europe? We are
currently limited to about 100-150 w o/p depending on mode and we
are trying to negotiate for a 1 Kw limit but the authorities asked
for evidence that this is allowed in at least some countries in
Europe.

3. What are the prospects of the secondary allocations in the amateur
bands? The athorities here think they should take away at least some
of them from us (like 1850-2000 KHz in top band) to protect
"legitimate" users from QRM. We pointed out all the QRM to amateurs
from so many other "professional" users but they don't seem interested.

Please help us fight Red Tape!

Thanks!

So you *are* saying that "most of them" are too lazy to learn it on their
own without a Morse code requirement. How is being called "too lazy to
learn" in the best interest of the newcomer who is being belittled? Do
you really expect to belittle him/her into learning the code?

We have been telling Larry (and Dick) for a long time that they would
catch more flies with honey than vinegar but they seem to just be
vinegar type people.

1141. Re: Replacing CW by PSK31

Newsgroup: rec.radio.amateur.policy
Date: 2002-07-10 17:36:30 UTC
From: Dan/W4NTI <w4nti@mindspringnospam.com>
Message-ID: <aghr8ohpb1@slb4.atl.mindspring.net>
Source record: 48855

I guess the fact that six meters does not propagate to DX land on a regular and consistant basis doesn't count, eh?

Oh and BTW I am hearing and working MANY MANY more CW stations on six meters than I have ever worked in 40 years on that band. Oh excuse me....its a 'no-code' band. Gee I wonder where all the 1x2 calls are from.

Dan/W4NTI

The real G4VGO seemed a bit surprised he was posting on the newsgroups. Did you not think to ask him if it was OK to use his callsign and Email address?

It will be interesting to see how many foriegn amateurs share your views-
most I have heard seem all to willing to work M3s.

I remember a conversation with an RIS man, must have been 20 years back. He had recently attended a Europe wide meeting / conference of RIS / license enforcement types and related some of the content.

While the Italians seemed to be regarded as being the most cavalier as regards regulations, first place for bascially having the most "arseholes" (that was his word) in the amateur radio went to the UK.

Silly postings like yours Gareth will only extend that view and do no good for amateur radio.

>
>What percentage of those tested at 13 wpm before the FCC do you think could
>pass a 13 wpm test today?

Total percentage or those who are still alive?

I know I can - that's 100% so far.

>Where are the archives that contain the records of the FCC retests of the
>Conditional licencees? That happened long before the internet. I am just
>curious where you went to check them.

Me too.

>I am just curious; perhaps one of the historians here can cite the percentage
>of hams that were Conditionals.

I'm not a historian, but here are the figures from early 1965:

Novice: 13,930
Tech: 58,546
General: 101,217
Conditional: 40, 529
Advanced: 39,928
Extra: 3,683
Total: 257,833

Conditionals made up about 16% of US hams at the time. I don't have figures handy for earlier or later.

One interesting factoid is that when the distance requirement was reduced from 125 to 75 miles in 1954, growth increased, and when it was increased to 175 miles in 1963 the number of hams the growth dried up. Not the only factor, of course, but after the 1963 changes you had to live way out in the boonies to qualify for a Conditional..

> Do the archives indicate what percentage of
>the Conditionals obtained their licensed by giving Uncle George's address?
>
None that I've seen. But I do clearly recall how upset some local Conditionals
were about a false rumor that they'd have to retest.

I'll also be abroad that week on holiday in VE7 with two other Hams (G4's).
We'll be setting up shop and operating lots and lots of M3's.

QRV 40m-1.2cm. AO-7 & AO-40 contacts especially welcome.

Hi all.

Please just remember not all CB..ers are bad. I know many 11mtr ops that perform better than hams. So please do not tar everyone with the same brush.

Also i think that we all have to start somewhere.
ENCOURAGEMENT would be helpfull from professionals like yourself. I thought the idea was to promote radio not the other way. Its not the operators you should have a go at but the Licensing people or RSGB.

i HOPE MY COMMENTS ARE NOTED. (unlicensed SWL)

As long as the rules indicate that automatic identification can occur in morse code no faster than 20wpm, those repeaters [continue to] meet the requirements. This even holds true for the repeater subbands at 222MHz and 1285Mhz, where novices can use repeaters (they just can't be the trustee of one).

You assume that "no code" => "doesn't know code." If that were universally true, then no one would ever be able to upgrade out of that license class! :-) Obviously, some of them do know it, but prove it later when they actually pass element 1.

In the U.S., only the 72-76Mhz segment of that is not broadcast TV. It is
between TV channels "4" and "5". Amateurs have no allocation in that range.
This allocation will probably be "region 1" only.

Its interesting that one who doesn't know their own repeater's ID can be a
trustee(Technician), but one who can copy the ID (Novice) cannot be a
trustee.

Only because you said, then snipped, this:

"If you want to be as obsessed about the way Dave operated overseas decades
ago as you are about other things, that is your business, Brian."

Dave's operating in question was only 2 years ago, Ed, not "decades" ago.

It is unreasonable. The questionable practices that I've called Dave on
were while he was in Tanzania (i.e., 2 years ago). Are you having trouble
following the conversation, Ed, or just being a jerk?

...Just another point of proof that the FCC doesn't know what it's doing in the
rulemaking process.

What they probably should have done is:
1) Fix all these inconsistencies.
2) Actually permit one renewal for licenseholders of currently defunct
license classes if before 2005, then require that they upgrade or upon renewal
after 2005, downgrade them (advanced -> general, novice -> nothing).

3) Eliminated permanent operating authority for an element 1 CSCE. By not doing so, we're back in the same situation that existed from 1991-1994.

It makes me wonder whether or not the FCC staff that worked on restructuring actually understood the rules.

Dave, I didn't measure your response too highly on the relevant scale,
either. So try this:

Did you remember talking to the French Ham, especially after I reposted your
exchange with him? Did you remember him telling you the French 6M
authorization, especailly after I reposted your exchange with him? Did you
read Dennis' info on the French 6M authorizations? Did you recall that I am
in your callbook, especailly after I reposted your exchange with me?

The United Negro College Fund has a saying that you might consider, "The
mind is a terrible thing to waste."

You can dodge and hide all day long behind that poor memory of yours, but
your forte' appears to be predicting the future. The important topic you
bring to the table is if I'm going to spray paint your car. Am I?

73, Brian

Noting of course that correlation doesn't necessarily imply any causality.
It could even be that the distance requirement wasn't a factor in anything
at all. Multivariate statistics are like that.

I don't know why you'd find this unexpected or significant. The upset
seems to have identically the same root cause which upset Generals
and Advanced when they lost full privileges, and which makes people insist
that current amateurs not lose privileges in license restructuring even to
this day. Many people seem to get upset if you ask them to pass more tests
to retain the privileges they already have, and they seem to feel this way
independent of their license class. There doesn't seem to be anything
special about Conditionals feeling the same way when presented with the
same prospect.

So moral questions are meant to goad? No wonder there's a problem in
America today.

Sen. McCaine: "Mr Anderson, why did you not use generally accepted
accounting principles with this client?"

Art Anderson, CPA: "Sir, I will not answer that question because I believe
it to be a leading question whose sole intent is to goad."

And my

Sure - but has the FCC ever included a sunset provision in the ARS rules? It would have been simple to include a sunset provision for the Novice, Tech Plus and Advanced class licenses, but it wasn't done.

Does anyone really think that the FCC will keep any code testing of any kind without S25.5 requiring it?

It makes sense. Prior to 1954, almost any auto trip of over 100 miles was
an undertaking for many people,
especially young people. Drop the distance that allowed loacl testing via
the "conditional route"
and you're bound to create more opportunity for interested people to even
want to become a ham.

When the distance increased to 175 miles in '63, that was probably a 4 hour
distance for many
people, two hours if they were about 100 miles. That 100 mile increase (75
to 175)
likly created a significant distance roadblock for many people...and,
especially

youngsters.

Cheers,
Bill K2UNK

>1954 minus 1948 is 6.

The invention of the transistor was disclosed by Bell Labs in December,
1947. The actual invention was several months prior to that.

1954 minus 1947 is 7. :-)

>>TM 11-690 came out that year, not only had
>>the standard transistor symbolism but lots of different schematics
>>and nomenclature and some design data...all for transistors.

>So? Are you saying RCA was behind the times in 1954?

No. TM 11-690 is "Theory and Application of Transistors," a
technical manual or "TM" published by the US Army. It described
the theory and application of transistors. Further, it used the
standard symbolism of the transistor whereas many textbooks
of the 50s and some of the 60s used a non-standard symbolism.

>Or were you a junior member of a large team that took care of them?

Is an E-5 a "junior member" of anything? Try telling a three-up-and-one-
down in the US Army that they are merely a "junior member" of anything.

Tip: If you need a demonstration of "shouting" try the above... :-)

>>What were you doing?
>
>Learning to walk and talk. What's your point? Does being older make you
>right? I don't think so.

"Learning to walk and talk" before being born? Precocious! :-)

Were you designing and building nursery care equipment? Pay for them
all by yourself and take full responsitibility for them in 1954?

Or weren't you just a junior member of the nursery trying to go
through potty training? :-)

>>I have one. Makes a nice little
>>artifact, sort of good for having to revitalize an old tube set. :-)
>>Audio Amateur Press produces the CD. They are in Peterborough,
>>New Hampshire.
>
>HR was in New Hampshire, too.

Oh my! Guilt By (geographic) Association! :-)

BYTE magazine is in Peterborough. BYTE has published my work,
too. Are they "defunct?"

>>2N3904, 2N3906, 2N4124, 2N4126 are all still available on the
>>market, new, just as they were 30 years ago. Complementary
>>symmetry transistors, general purpose types with f-sub-t to
>>150 MHz.
>
>Can they be used to build all of the projects in HR?

Pathetic, spiteful commentary from an alleged working electronics
engineer...or just a spiteful commentary from an ignorant engineer
who doesn't know his PNP from an NPN. :-)

Do you really know the meaning of "general purpose" or
"complementary symmetry?" Or even "f-sub-t?"

>>THEORY is hardly ever out of date, is it?
>
>Of course not. But you're the one who complains about things being OLD, and a
>part of HISTORY. How come it's all right for you but not all right for others
>to say those things?

Don't misdirect into the "defunct" area... :-)

Is theory out of date or isn't it? Try answering the question.

>>Or do you think ham
>>radio theory only comes from the Big Brother in Newington?
>
>More put-downs. Civil deportment very lacking in Lenover21.

Pardon me, your memberhighnessship, let me rephrase:

Do you think ham radio theory only comes from the ARRL?

>>Jimmie needs a lesson in civil comportment on newsgroups.
>
>HAW!

You do.

>Explain how you are being "civil" by calling people names and ridiculing
>their accomplishments.

Why do you consider lack of praise to be "ridicule?"

You made a very long Federal Case out of not being a formally-degreed
engineer and joined the crowd (largely of syncophants who are PCTAs)
who denigrated and ridiculed actual employment history of BEING an
electronics engineer. You did this without any evidence of contacting
either my former employers or the ham licensees I listed as references.
Then you had the temerity to NOT say who your employer was "because
I would make fun of your employer or work." Poor baby.

All of that casts doubts in the minds of many that you are NOT
employed as an "engineer" in electronics.

>>So...I can't buy those common transistors from, say, Digi-Key
>>today? No problem. Single-piece price for them are 21 cents
>>each (less in quantity), maybe another 4 cents each for the
>>small-quantity shipping charge. Need some common rectifier
>>diodes like the 1N4001 through 1N4007? Digi-Key's price is
>>10 for $1.36 "cut tape" (they come on an ammo-belt like tape)
>>or 13.6 cents apiece.
>
>Those are just a small subset of the devices needed to build a useful
>project.

OK, Mr. Extreme Literalist, I'll just name the ENTIRE Digi-Key catalog
as containing the parts that would be "useful" for a project. :-)

>How many amateur radio transceivers have you built with your own money and
>time? How many have you designed?

Six, but those were not solely for amateur radio although each one could
cover at least one amateur band.

Four of those were my own design, notebooks signed and witnessed to
prove it. The other two were ARC-5 Command Set combinations of
receiver-transmitter that I obviously did not design. :-)

>>Digi-Key carries an enormous selection and sells singles through
>>thousands. www.digikey.com
>
>Sure - I buy from them regularly.

Of course you do...you access their web site, imagine things, then
say you "buy" from them regularly. :-)

>> A single transistor is functionally
>>equivalent to a triode vacuum tube. In the year 2002 hams can
>>buy small quantities of common complementary-symmetry
>>transistors at 21 cents apiece in 2002 dollars while in 1962 an
>>electronics experimenter got lucky on finding a 6C4 triode at a

>>bargain price of 97cents in 1962 dollars.
>
>So what? Total project cost is the issue.

How does one amortize a used tuna can? Or a scrounged quad
2-input NAND gate to make into a solid-state equivalent to a
little MOPA set? :-)

>>You need ICs? Digi-Key, Newark, Allied all have them at low
>>prices for small quantities. There's too many to pin down for
>>examples but that can be done
>
>Total project cost. How many transceivers, Lenover21?

...contact my accountants, Arthur B. Andersen Company.

:-)

>Back in 1975 I desined and built a diital dial adapter using TTL ICs. Would
>work with almost any HF receiver. Pretty advanced for the time.

I'd say it was damn well advanced if you could get TTLs to display
anything! :-)

Okay, okay, so you desined it...were you able to cosine it? :-)

Did you write it up for publication? Go through the patent application
steps?

>>Ohm my, a trusty Simpson 260 doesn't cut it by itself? :-)
>
>How many transceivers?

Pay attention, speedy, I already told you...

>>If you want everything in a hobby to be "simple projects" then
>>content yourself at building tuna-tin transmitters and that good
>>old standard, the regenerative receiver using a single tube! :-)
>
>I've built those. Also multiconversion receivers, heterodyne transmitters,
>transceivers, and all sorts of other stuff. How much have you built as an
>individual home workshop constructor?

You built "heterodyne transmitters?!?" Did the FCC ever catch you
"heterodyning?" What did you convert those receivers from? :-)

>You ever build anyhting?

Yes. "Other stuff" besides what was told you. :-)

>>>One notable exception to this rule is when parts can be obtained at a small
>>>percentage of their retail cost. "Surplus" outlets, hamfests, internet
>>>venues and even dumpsters are sources of such parts - including tubes.
>>
>>OK, you get your stuff out of the dumpster...and the quality of it will

>>let your project go right back to the dumpster.
>
>Typical uncivil putdown noted.
>
>It's called recycling.

No problem. You are welcome to rummage through our recycling can
any week before Monday (pick-up day in my neighborhood). All kinds
of "neat" things in there... :-)

>Build us a multiband transceiver with only the parts in those catalogs.

Why? Will you praise it, say it is "advanced for its time?" :-)

Or will you deride it, denigrate it, and otherwise damn it if it doesn't have
"CW" capability?

Is monoband design "less quality" than multiband? :-)

>>>The parts cost issue is not a new thing. It is one of the main reasons for
>>>the success of Heathkit.
>>
>>True for 1962.
>
>True today.

Heath doesn't make ham radio kits in today's time (year 2002).

>That was true for ALL consumer-type electronics. Competition from less
>expensive forein manufacturers. Heathkit could not compete with Sony,
>Panansonic, Kenwood, Yaesu, Icom, etc. Most American companies could not.
>That's why they became defunct.

Of course, Mr. Extreme Literalist. Just like Ford and General Motors? :-)

>>All you have left is an emotional surge of nostalgia that NTIS cannot
>>calibrate.
>
>Like your nostalgia for 1954?

What "nostalgia?" In 1954 I was a newly-minted E-5 with supervisory
duties on controlling HF transmitters...and waiting for WW3 to break out.

>Is there something wrong with using older technologies?

Yes, when you champion those because it is the only technology
you seem to know anything about... :-)

You belong in an era that existed before you were born.

>That's one of my stations. I have other amatuer radio equipment that I built
>and designed myself. Do you?

I'm not a licensed radio amateur. Why should I "built and designed"
something I can't use? :-)

>> Did you DESIGN it?
>
>Of course not. It was cheaper to buy the kit.

So...you did NOT design something, but rather assembled a kit that
someone else designed. [at least you admitted it outright...there's
hope for you...]

>Tell us how many amateur radio transceivers you've designed and built as an
>individual, using your own time and resources. I've done three, all multiband
>HF designs. None were copies of published designs - in fact, I've only done
>one or two copy-projects in my life.

Of course you did. Just a minute while I get a notepad and start scribbling
an endorsement of you for a medal from some important scientific institution.

Okay, go ahead, describe them in detail...

>>>>
>>>>That's not answering any questions.
>>>
>>>The only question you posed was rhetorical.
>>
>>Nonsense. Inaccurate.
>
>How? You asked a rhetorical question.

No. I gave an explanation. I will ask it again: "Do you think a retail
outlet sells without profit out of the goodness of their hearts?"

Do you think that or do you think differently?

>>The Word of Extras in here has the ARRL
>>as acting out of the Goodness of Their Hearts.
>
>Who said that? Not me.

Not in those same words, extreme literalist, but in tone and tenor of
your words. You are an amateur extra. You state pedantic
conditions straight out of the ARRL statements as your own. You
become upset at negative criticsm of any kind about the ARRL yet
you do not work for them. You are a "believer" in the sanctity and
honesty of the ARRL. Ergo, you espouse the "Word of Extras."

>>>ARRL's publishing operation is using a certain retailing strategy.
Obviously
>>>they want people to buy their publications via retail outlets if at all
>>>possible - that's one way they support stores that sell to radio amateurs
>>>and prospective radio amateurs.
>>

>>Again, obvious nonsense.
>
>No, it's obviously true. You just don't like the ARRL for some reason.
Probably
>it's because their books are both good and inexpensive.

You have failed to show "obviousness" of your statement. You stated that
the ARRL wants people to buy their publications via retail outlets if at all
possible. That's not obvious.

If the ARRL wanted people to go to retail outlets to buy their products, then
they would only advertise their wares but would not make them available
through mail-order. That would be obvious. The ARRL does not do that.

That's not liking or "unliking" the ARRL, merely stating an observed
condition which may be observed by anyone else, referenced by the
ARRL's own publications and web site.

>>If the ARRL "wanted peoble to buy their publications via retail
>>outlets," why would they have them for resale through headquarters
>>in Newington?
>
>The idea is to maximize the availability of the product. Those who prefer mail
>order can get publications direct from Hq, either by mail or online. Those who
>would rather buy from a store can do it that way.

Then your "obvious" word is incorrect as you used it earlier in the message.

You cannot use a strong word like "obvious" and then, a few sentences
later, make it unqualified as a descriptor.

>ARRL also has a booth at most hamfests where publications can be bought
>directly, avoidingshipping.

Irrelevant. One has to attend a hamfest in order to buy it. Mail ordering is
available to anyone with a postal address.

By adding the irrelevant "booth at hamfests" qualifier you have further
reduced the original "obvious" descriptor. No points for you this time.

>>How many "retail outlets" for amateur radio equipment are there in
>>the USA? [ask K0HB]
>
>You ask him, if you really want to know.

Hans Brakob has stated in here more than once about the shrinking
number of amateur radio retail outlets in the USA.

>However, there are over 200 stores selling ARRL publications in the USA. The
>ARRL website has a store locator, identifying retail stores that sell ARRL
>publications.

There are approximately 300 million in the USA population. If there are
really "200 stores selling ARRL publications" then that would be about

one store per 1.5 million in the population.

>>>Postage and shipping are not the same thing. Shipping includes things like
>>>the cost of packing materials, labor, general overhead and profit.
>>
>>Duh...
>
>Really being civil, aren't you?

I thought that any working engineer would have knowledge of "burden" (the accounting use of the word) which includes packing material, labor (in handling the packaging, addressing, etc. of product). "Burden" (the accounting use of the word) has been familiar to me since the 60s and exists in nearly every business. To assume that others do not know it made you very uncivil originally.

>>OK, order an official ARRL membership decal (#1130) for a dollar.
>>Do you or do you not pay FOUR dollars in shipping charges to
>>include "cost of packing materials, labor, general overhead and
>>profit?"
>
>So what? It's a disincentive for small orders.
>
>How many official ARRL decals have you ordered?

Irrelevant again. It is not a "requirement" to order something to talk about the conditions of ordering.

>>An envelope, 37 cents in a stamp, a zip through a computer-
>>controlled printer for the addressing and 1/12th of an hour time
>>(at most) of a clerk to handle it. All that "shipping charge" is
>>still worth FOUR TIMES the cost of the product itself?!?
>
>Are you offering to do it for less?

I asked a question, pointing out that which should be obvious. You "replied" with an irrelevant, uncivil "question."

You could have answered the posed question civilly with any sarcastic overtones. You did not, choosing a nastygram type of comment.

>>Is there NO PROFIT in the product ITSELF?
>
>There must be some.

You state a generality without answering the question. That's not an answer.

>>Note: The ARRL sells its publications to retail outlets at a
>>lesser cost than it charges to individuals. Does the ARRL
>>"take a loss" on that difference in price? I don't think so.
>

>What's your point? Retail outlets buy in quantity - most individuals don't.

The "point" should be obvious to anyone with basic marketing and
selling experience.

Those basic trade skills can be explained to you if you wish to
further your knowledge of business. Do you wish such an
explanation?

>>That difference in price is a lesser profit for the ARRL but it
>>still represents PROFIT on PRODUCT.
>>
>Do you know how much it costs to produce the publications?

I have experience in costing-out publishing costs in addition to
experience in costing-out design, development, and manufacturing
of electronics goods.

As a generality in US publishing, the "list" retail price on books is
twice what a retailer must pay to buy those books. To put it another
way, the general public paying a list price on a general book will
have approximately half that purchase cost go towards profit for the
retailer. The publisher still makes a profit on their price to a retailer
so more than fifty percent of a list price at a retailer goes towards
profit.

This high "profit margin" on the general book market allows some
firms such as Crown Books and Amazon to resell at lower-than-list
prices. While those "discount" retailers make a lesser profit than
"list" retailers, they can sell more product than "list" retailers due
to attracting more buyers. The end result is that the "discounters"
make more total profit than "list" retailers.

>I simply point out errors and mistakes. You make so many it's hard to keep
>up.

Incorrect again. You state an incorrect absolute as if it is fact, yet it
isn't true. That is very uncivil of you.

>One of Lenover21's missions is obviously to denigrate the ARRL at every
>opportunity.

Incorrect again. Tsk, tsk, making all those (incorrect) "factual" statements
and then stating others are "uncivil"...bad form.

>>>So? What's your point? It's obviously a retailing strategy that encourages
>>>sales through retail outlets rather than mail order, and encourages
retailers
>>>to sell ARRL publications.
>>
>>Sorry, that's not a justifiable statement.
>
>Yes, it is.

You have not justified it yet. Simply stating a point does not make it so.

>>There aren't enough ham
>>radio retail outlets in the USA to satisfy such a condition.
>
>212 that sell ARRL publications, according to the locator.

One per 1.5 million or so is not significant nor is it any sort
of "justification" for an "obvious" condition..

>Somehow I suspect that you want the ARRL to simply go away.

You may "suspect" all you want, but your statement is still incorrect,
biased, and uncivil.

Like any political-action organization, the ARRL should not consider
itself above reproach. The ARRL membership has a minority of all
licensed US radio amateurs. As such it should not claim that "it
represents US radio amateurs" with any honesty or integrity.

The ARRL could correct a number of perceived wrongs in its
approach to control-leadership of US radio amateurs. To do so
would admit it is not perfect nor even approaching a majority view
in amateur radio. Some members of the ARRL, such as yourself,
do not allow any negative statements about the ARRL...and make
libelous statements about those who challenge the ARRL for
whatever reason. That is the action of an emotional fanatic.

>I'm not worked up. I'm not the one calling people diminutive names and
>shouting.

"Diminutives" in naming seems to be a standard practice in here. :-)

"SHOUTING" (as in use of all-capitals) is thoroughly subjective to the
reader. You haven't heard me shout. You have only seen some of
my words written in all-capitals. Please try to be correct in phrasing.

>You're not the moderator of rrap, and you can't control who posts here or
>what they post. Grow up and learn to live with it.

I'm not trying to "control" who posts or doesn't post. I'm simply pointing
out certain negative traits of individuals who cannot take any sort of
negative criticism. You do not seem able to take negative criticsm.

Learn to take negative criticsm. That will enable you to better interact
with others.

>>Amazon is still a profit-making business.
>
>HAW! That's a GOOD one!

Is Amazon still in business after many years? If so, it must be making
a profit. Businesses do not continue in business without profit.

"Creative accounting" may make it appear that a business is "losing
money" as well as "making a profit."

If a business remains in business, it is making a profit.

>The facts are there for all to see. Show us where Amazon is "making a profit,
>all the while absorbing those high shipping charges plus their 'burden (bean
>counter talk for the overhead of plant and equipment and all other
>miscellaneous business costs)"

I'm not an accountant nor am I in possession of audit information on Amazon.

That is irrelevant to the subject at hand...unless you are making another
misdirection to avoid answering my questions on the main thread.

If a business remains in business, it is making a profit. No profit, no
more remaining in business. "Creative accounting" can make real
profit appear as a "loss" and real loss can be made to appear as
"gain." See Enron and WorldCom now under investigation by the
US government.

>You keep mentioning the ARRL membership percentage. Is there a point to that?

Yes. The ARRL membership is a minority of all licensed US radio amateurs.

The words of the ARRL are generated by a minority of that minority...which
includes the board of directors of the ARRL.

>Not misdirection. A simple question. You derided a current, nondefunct
magazine
>that has published an article by me as a "high priced fanzine", but we don't
>see any hard data on "ham radio" magazine.

Where is the retail outlet where anyone can buy an issue of "Electric
Radio?" Are all articles available on CDs?

Do they have cutting-edge, state-of-the-art articles to advance the
state of the amateur radio art?

>>QST is a MEMBERSHIP MAGAZINE, so said in capitals because
>>so few understand the difference between that and an independent.
>>The "subscribership" numbers of QST are the same as the ARRL
>>membership. QST doesn't depend solely on advertising sales to
>>keep going but can receive backing from the ARRL general budget.
>>[whether or not they do so is irrelevant...the fact is that QST is
>>backed by the ARRL because it is THE periodical of ARRL
>>membership]
>
>And this is a problem how?

Advertising revenue is the main profit-making element in periodical
publication. Advertisers buy advertising space based on a periodical's
market penetration and that market's demographics. A membership
magazine can point to its membership numbers as the total market.
Further, a membership magazine has the advantage of the general
membership fund to support it when needed.

By contrast, CQ and 73 are independents, have no support from any membership organization, depend solely advertising sales to stay in business. Their sales are through retail sales outlets and through subscribership. They have no buffer or larger group budget advantage to fall back on during lean ad sales times.

There should be an obvious difference between membership magazines and independents. Publishers know that. If you deny such obvious differences then you are being spiteful and not really arguing "publishing."

>>>What percentage of all licensed US hams are members of NCI?
>>
>>No Code International is, in its own statements, solely a political
>>action organization. It does NOT require all members to be
>>licensed in any radio service. Further, it has said since the
>>beginning of its organization that it will dissolve when the morse
>>code test requirement for an amateur radio license is eliminated.
>
>Doesn't answer the question. What percentage of all licensed US hams are
>members of NCI?

Irrelevant again. Misdirection. To reiterate:

No Code International is, in its own statements, solely a political action organization. It does NOT require all members to be licensed in any radio service. Further, it has said since the beginning of its organization that it will dissolve when the morse code test requirement for an amateur radio license is eliminated.

>Sounds like you want the ARRL to just go away. You'd like that, because the
>ARS in the USA would be left without a strong national organization.

Sounds like Miccolis has a vivid imagination and a spiteful attitude. :-)

The ARRL could change its marketing policy on resold goods. That was the gist of my commentary. The ARRL is NOT a discount seller of much of anything nor is it a "model" for the reselling business. :-)

>It is interesting to note that Lenover21 does not offer solutions to problems
>but simply says how things should not be. One does not get things done by
>saying what shouldn't be done.

I am not in the reselling business nor the political-action lobbying business nor am I a membership organization getting members to give non-members the business. :-)

Miccolis has his bloomers all in a knot and should learn to live with some taking pot-shots at negative aspects of his beloved ARRL.. Either that or claim that the ARRL is a religious organization to fit his belief system. :-)

>I have a full cabinet full of back issues of "Ham Radio" and "HRH", Len.
>Nobody is dumb enough to believe that when a magazine publishing company
>is gone that the back issues evaporate. The business which published
>the magazines is defunct.

Incorrect still. Communications Technology, Inc., the business organization
that published Ham Radio Magazine and Ham Radio Horizons and ran the
Ham Radio Bookstore, was SOLD to CQ. Selling a publishing business is
simply a transfer of ownership. In the case of a publishing house, the
transfer of ownership involves "intellectual property" or copyrighted material
in print and images.

You continue to apply "defunct" to something which is an improper word
although that word carries emotional bias that seems to serve your
purpose in denigrating an independent publisher who existed for 22 years
and whose product is still respected.

>You are certainly giving Brian a run for the gold medal.

This is not a "contest" for message totals. I am simply trying to place a proper perspective on your astigmatic focus of denigration of others' works.

You insist on having some "last word" on a subject you do not understand. You will not get it until you show some understanding.

Not a clue. But they get paid to make the rules, and no one else can make
the rules for them.

Your inability to remember anything that might conflict with the argument of
the moment.

Dave, that's patently false. You addressed me in the above statement.

Also, why would I put you in my logs as often as I like? You're in there
only as often as we've worked each other. And why wouldn't I be in your log
if we've already worked each other, we've already QSLed each other, and
you've further acknowledged it on rrap. Now there's no guarantee that I'm
in your log?

Must be new math or something.

>the best interest of the person being belittled?

A little common sense goes a long way, Cecil. You and I both know (As well as Larry.) that such a wide- sweeping generic statement is more the result of emotions rather than reason. Assuch, it can be immediately discounted. When I was a Tech, Larry's comments NEVER made me feel "belittled." Did I ever get pi$$ed off? Sure, but a little anger shouldn'r diminish one's self esteem. Try not to dwell on the delivery, focus on the message and I think we can all recognize the "tough love" approach at work.

BTW, will a 40-meter dipole give me a better signal *in all directions* vs. an 80? Also, will it suck...er...ah...perform poorly on 20 because it's a full wavelength dipole at those freqs?

How's that for changing gears? I have the day off tomorrow and after taking my 5 yr. old daughter to get her first cavity (A crater!) filled, she's going to help me raise some copper into the trees. (God, I dread this trip to the dentist!) Take care, Cecil.

73 de Bert
WA2SI

BTW, I see that I studied fast "Farsworth" instead of Farnsworth...EMbarrasing!
:-)

>own without a Morse code requirement. How is being called "too lazy to
>learn" in the best interest of the newcomer who is being belittled? Do
>you really expect to belittle him/her into learning the code?

Cecil:

For years, I didn't become a licensed amateur radio operator mainly because I was too lazy to learn the code. I couldn't be bothered to learn how to beep when we were landing men on the moon and building computers that could fit inside a building as small as a typical house. Fortunately for me, I overcame my laziness and, during one of the busiest periods of my life, learned the code, began using it almost exclusively on-the-air, and have enjoyed it's benefits ever since. The thing about the Morse code is that it is the only part of becoming a ham that challenged prospective licensees to overcome their laziness. It is the only mode which requires one to develop a rather unnatural and non-intuitive physical communications skill, therefore without a dedicated effort, one will not succeed at learning it to a useful proficiency level.

Like it or not, how a person deals with the "laziness" issue is the core of the code testing debate. Those with the maturity and emotional intelligence to overcome their own inertia are the ones who become (or became) the True Believers in code testing. I'm one of them.

Hi John,

>I already have Element 1 done from my days as a Novice.

Cool beans! :-)

>It's not that I
>something against CW, but I just never had the initiative to learn 13 wpm.

Understood.

>I didn't get on HF when I first started as a Ham and I didn't feel the need
>to learn faster CW. But since this last Field Day plus getting my
>"restructured" General ticket, I'm more interested in HF than I was before.

Enjoy. ;-)

>Sure, I could learn to send CW at 13 wpm and I probably will soon.

I have no doubt you will. I wouldn't be surprised if you're closer to telling Larry to pi$$ off @ 20-wpm than you think. Here's a funny. After studying the code and feeling pretty confident, I ignored Nï¿½BK's (I think?) advice to kinda leave it alone the day before the test. So guess what? I couldn't copy 5-wpm to SAVE MY LIFE! Man-o-man, did I feel panic set it. Dick, told me to "calm the *&$! down." Good advice because when the test actually started, the characters sorta just floated on in. Funny now...but not then.

>But not
>because Larry bullied me into doing it. I just took offense to his remarks
>for making a generalzation based upon his bias for "lesser" hams.

Fair enough and quite understood.

>And after thinking about things, I'm not going to let Larry bully me out of
>this NG.

IMNSHO, you've made the right choice for the right reasons. Knock 'em dead.

>73's Bert

...and to you sir, take care now.

Dick has been corrected time and again, but continues to lie. That would make him a congenital liar.

I have spent an enormous amount of my own free time learning the Morse Code. I passed the code exam with 100% copy. Because I didn't get anything out of my time invested, Dick says I'm lazy and didn't have time to learn it. He couldn't be further from the truth, but we already knew that.

I'm still waiting to hear the "POP" sound when Dick pulls his head out.

First, what is "TRVTH"? If you asked me to QSY down to the CW
portion of the band to meet you for a CW qso, I would simply
refuse. Why? Well I passed the required CW test for a Novice
license and worked CW because that was the only mode available to
me, when I upgraded to General, and yes I passed the 13 wpm exam
in front of an FCC examiner, I never worked CW again because I do
not care to operate CW. I have been a ham for over 30 years, so
are you saying I am not a real ham? Are you going to call me a
cber just because I refuse to operate CW? And no, I have never
operated on any cb frequency?

Larry is still upset because he was required by FCC regulations to
take and pass the FCC exams to obtain an amateur's license.

John, stand tough. There are a few on here whose specialty is bullying.
Don't buy any. Ditto his "superior ham" and "real ham" garbage.

I was about to exit the group because of the constant digs on my integrity,
my sanity, and my character.

I changed my mind. They really hate it.

Larry is a perfect example that being able to operate CW at => 13
wpm doesn't necessarily make you a better ham or person. He is
still torqued that he was *required* to pass the FCC exams in
order to obtain an amateur's license.

How many of your amateur exams did you take in front of an FCC
examiner at an FCC field office?

NOoooooooo,, genius cum idjut, that's nowhere even close to what I said.
I and others have stated repeatedly that when no hams are required to
learn code for the test darn few will eve develop the interest in it to
ever learn it. Experience of recnt years proves this out- so many have
been just too busy, and that is true, they actually are busy, they never
get around to learning code. Of those who had to do it for their license
there has always been a good percentage who just did it because it was a
requirement who found that hey, this is actually fun, enjoyable and
satisfying. That is the cadre of CW ops today. When the test goes, that
source which is by far the major source of CW ops, is gone, gone,gone.

Yes indeed. Had I been required to go to an FCC district office (Kansas City-260 one way miles) or even a quarterly test site St Louis-200 one way miles) I would never have been able to get a ticket beyond a Novice. That was in the days before Intestate highways, too. Even the two lane roads were no bargain on those days. A trip top the closest city 80 miles away used to be a major all-day affair. Now it's an hour and a half drive.

In fact, the very first stretch of the Interstate Highway System was started later that year- I-70 westbound from St Louis. The year was 1957.

That is one example. There are an infinite number of other
possibilities. If I remember right, 15wpm characters with
2.4wpm spacing between characters equals an average of 5wpm.

There is no suggestion that CBers are bad. But CB is not
Ham Radio.

CB is an operating hobby.

Harm Radio is a technical hobby.

By supporting International M3 Boycott Week, you will
help to emphasize the difference.

I think you made comments about progression (which I
inadvertently deleted). No bad thing, but the M3 licence
is not progression.

It is CB, fair and square.

That's because DXing as it has become is a
CB (Cheque Book) activity. Buy a rig, press
a button. Say, "Hello, you're 5&9, Goodbye"
over and over again.

No skill involved (especially when Internet DX
prompting is used). No technical improvement to
the station being tested.

As has, again, been repeatedly stated, it is clear that few will realize what CW really is without having gone through the process of learning it for the test. Thus, few will ever even give it a try. Most of the CW ops of today would have done it the same way, given the same circumstances. It's human nature. You do know about human nature, don't you Cecil?

Be interesting if you met some of the M3's from round here, I think they'd
take exception to that comment.
Most of them were either G8's or G6's who succumbed to the temptation of
easy access to HF but as Hams I'd bet they've been licensed as long as you
have (if not longer) and I personally know of two whose knowledge, expertise
and operating practices are better than many 'real' hams who did their
morse.

Brian:

During the years when I also harbored a hatred and resentment toward the code testing requirement, I spent what seemed like "an enormous amount" of my free time trying to learn it -- without success. I didn't succeed
mainly because I was more inclined, at that time, to believe that I would fail. I didn't really want to be a CW operator, so the learning didn't come easily -- or in my case, at all. Then one day, I decided that I wanted to be a ham more than I wanted to go on hating the Morse code, and that's when I suddenly heard that loud popping noise!

>I'm still waiting to hear the "POP" sound when Dick pulls his head out.

Well, you won't be hearing it while your own head is planted firmly up your ass!

I had none of those feelings. I didn't mind studying, or taking the exams.
It was after actually getting on the air and finding nothing there that I
thought I'd been wasting my time.

Then one day, I decided that I wanted to
> be a ham more than I wanted to go on hating the Morse code, and that's

Larry, my head is just fine where it is, up on top. That you hated code and
resented having to take exams is not my problem. I'm glad for you that
you've made it to 20WPM. Now what are you going to with it?

1229. Re: Only 11 months to wait for the suppress of CW in the ITU-RR !

Source record: 49043

From: n2ey@aol.com (N2EY)

>Thanks for the history. But note that the RFI stuff was all-new rules that
>had not been previously discussed in detail.

The FCC first enacted RF-exposure rules about 15 years ago. Those rules set limits on RF exposure, based on the ANSI standard of the day. The rules DID apply to Amateur Radio, but we had no specific requirements under the rules. When the limits of the standard were reduced, the FCC put the issue back on the plate again. ARRL argued that Amateur Radio should continue to rely on education and training to ensure that amateur stations complied. Other amateurs, including a few members of the ARRL Bioeffects committee, argued that amateurs should be required to evaluate their stations. The FCC set a threshold of 50 W as the level that triggered the need for an amateur operator to evaluate his or her station. Among other things, ARRL filed a petition for reconsideration that pointed out that the exposure limits varied with frequency, so the threshold should also vary with frequency.

The final rules set a 500 W limit on 160, 80 and 40, sliding up to 50 watts on 28 MHz and VHF, then increasing above VHF. Stations whose PEP RF output to the antenna that exceeds these power levels must conduct a station evaluation. Repeaters with less than 500 W EIRP or those whose antennas are not located on buildings, 10 meters or more above the ground do not need to be evaluated. Mobile and handheld portable stations are also categorically exempt from the evaluation requirement.

Hams can use any reasonable method to evaluate their stations. Most use calculations, or tables based on the the calculations done by other people. There is no requirement to file any paperwork with the FCC, other than an affirmation on one's station application.

>Sure - but has the FCC ever included a sunset provision in the ARS rules?

Not to my knowledge. This means that to change the rules, they would need to follow the process.

>Does anyone really think that the FCC will keep any code testing of any kind
>without S25.5 requiring it?

Probably not, but they will run the Part 97 changes through an NPRM, IMHO. My input to my ARRL Director, to help set ARRL policy on the matter, is going to be to ask that some code testing be continued, but as part of the overall exam, just like the questions related to other modes. Changes to S25.5 will not change the fact that Morse code is in widespread use in ham radio and a mode that is in widespread use should be covered fairly in the testing. But no single mode should be covered so "fairly" as to be equal to all the other aspects of amateur radio combined to determine the qualifications of

applicants. One can get all of the RF safety questions wrong, or all of the voice-mode questions wrong, and still be licensed.

Yes that's right, a 432MHz CBer with a sideband (naughty) rig.

Has anyone got a five tone bleep for an FT1000MP?

Better still a 'burner' (gasp!) I could do with a good warm.

:-)

not all DX stations operate as 'UR 59 TU'

some have more 'expertise' than a deterministic finite automaton. From the bilge that spreads forth of your keyboard, you would appear to be an non-deterministic finite automaton, with an incredible ostrich complex.

It's time to change the record, wake up and smell reality!

So by this logic, the code test helps ensure that Amateur Radio is filled with people who have nothing better to do. :-)

> When the test goes, that
>source which is by far the major source of CW ops, is gone, gone,gone.

Then if you really want to see new hams take up and use Morse code, you will have to find another way to encourage them to the mode, just like the proponents of every other mode do. Telling them that the only reason they will learn the mode is to pass the test is not a good one to accomplish that.

Well, Larry says they are simply too lazy. And I have said over and over that it is now up to hams like you and me to educate newcomers as to what CW really is including its numerous merits.

> You do know about human nature, don't you Cecil?

I sure do, Dick. I'm human and I learned Morse code long before I ever heard of ham radio. I didn't get up to 15wpm as a Novice because I was going to need to do so for the Conditional exam. I got up to 15wpm as a Novice in order to QSO effectively.

I think that it is only necessary to identify YOUR station. Since the repeater does identify (albeit in Morse), the problem is solved. The users simply talk and identify themselves, the repeater takes care identifying itself. BTW, about 6 months ago one of the N2HJD repeaters started that infernal 'beeping' and you could have knocked me over with a feather - it sent the time in Morse! Ah, the wonders of modern technology. I do know one local repeater that sends its' id properly every 10 minutes, but if you use the autopatch, it sends the id upon disconnect at about 30 words per minute (it still properly sends a slower id every 10 minutes). If you need to know the stations id, you can look up the frequency on the web and figure it out, but learning Morse makes it simple and easy.

I think we should insist on a 20wpm code test, too. Wouldn't want to go
to sleep in the middle of the 5wpm code test.

More like strange.

If your morals require you to police US hams working their proper
assignments while accusing them of being the cause of other hams in the
world *possibly* violating their own, strange indeed. Most hams are
doing something constructive, or at least fun.

> make him a congenital liar.

Really? I guess that when you made the statement that you just didn't
have time to study code to upgrade -well before the restructutring-
because you had to babysit the kids, but you had plenty of time to post
endlessly on rrap that makes ME a liar. I think the readers who were
here at that time will see it otherwise. So who is the congenital liar?
Just because later restructuring gave you the whole enchilada with your
Novice code test changes nothing. You lie when you lie, and later
changes don't bail you out.
Good luck on your career as a self deluding liar. Make that CONGENITAL
liar.

>
> I have spent an enormous amount of my own free time learning the Morse Code.

Wrong yet again, you got nothing out of it because you didn't want to
get anything out of it. Anyone who did -and many did- copied code
practice from SOME source until they could get the 13wpm test passed
-surely no terrible task in the days when the test included 10 EASILY
answered written questions. I recall many applicants passing the 13wpm
test by retesting largely on guesses until they happened to get one they
could luck into. But hey, it was the rules of the day, and we do follow

the rules, don't we? It wasn't up to me to make it accurate. Sorry you were sitting on the sidelines sucking your thumb. Most hams would have recognized the opportunity,grabbed it, and pressed on with life.Most did. That's another reason why I reject the "coded" argument re the garbage frequencies. Many who passed a code test are anything *but* coded.

Why the heck do you think I'm so disgusted with characters like you? You can't even accept "easy"!

He
> couldn't be further from the truth, but we already knew that.

You sure are a long way from the truth not to mention reality.

I have a brother who was a high speed CW op in the military, which he made a 23 year career, and knew enough electronics that he had a TV repair shop in his basement. I never could get him to get a ham radio license, nor his son. But he told me not long ago that he wishes he had got one way back then.

As I have said and some always misinterpret, ham radio is just not for everyone. Lots of people wouldn't have it if you gave it to them.

Dick

I and most others here are 10 times the ham you will ever be, if
for nothing else I don't determine if someone is really a ham
because they operate CW or not.

Because of your attitude you are the worst kind of ham, I would even say you are more a cber than ham. As you say, ham radio is a state of mind, and your state of mind is that of a cber so why don't you operate on 11 meters, you would fit in real well there.

Totally irrelevant.

The M3 is for those with the brain of a turnip.

If someone is better qualified than they need be for
an M3, but elects to downgrade, that is their stupidity,
and they are classed with the turnips.

me thinks the first thing he/she would do would be form a committee to
look into ''what the hell is 136?'' and release thr eport some two years
later.

then present it to another committee to consider it and produce another
report :-)

Yep.

> Did you
> read Dennis' info on the French 6M authorizations?

Nope.

> Did you recall that I am
> in your callbook, especailly after I reposted your exchange with me?

Oh, especailly then.

> The United Negro College Fund has a saying that you might consider, "The

...or, in your case, "The mind is a terrible thing". Do you remember
what I told you in 1998? Do you recall the piece of advice I gave you
in 1999? How about the W3 who outlined his view of your rants during
that period?

> You can dodge and hide all day long behind that poor memory of yours, but
> your forte' appears to be predicting the future.

Can you do that, Brian? How many fingers am I holding up?
Maybe you can do better on the past. What have you proven by
instigating three or four incarnations of your pointless mission on who
I worked on 6m from Tanzania? Would it be that some French stations
will break their regs in order to work a new country on six?

> The important topic you
> bring to the table is if I'm going to spray paint your car. Am I?

You tell me, Earl Scheib.

I understand that "Ham Radio" was sold to and absorbed by CQ. I
understand that the material was/is copyrighted. Do you understand that
"Ham Radio" is no longer published. It has ceased to exist.

>
> You continue to apply "defunct" to something which is an improper word

"Ham Radio" is two words and they are not improper, just defunct.
The emotional bias seems to be yours since you appear to be the only
person who is offended by the term "defunct".

> >You are certainly giving Brian a run for the gold medal.
>

Oh, I wasn't writing of totals. I was writing of the obtuse responses
you've provided. No one here has denigrated "Ham Radio" magazine. That
is all in your head.

> You insist on having some "last word" on a subject you do not under-
> stand. You will not get it until you show some understanding.

Your last stuff was garbled, Len.

There, you've done it again.

And once again, you've failed to define your mission. What you need to
do, Billy Graham, is address the morals of those French hams who were
operating where they weren't supposed to be. QSL?

Yes, I find your comment silly.

Not that I know of, Ed. Then again, WA8JOC might have the photocopy of
Brian's license in one of those enormous bags of green stamps we
accumulated.

Brian should send the QSL back in protest of my morals.

That means including one would set a precedent, which FCC prolly does NOT want to do.

>This means that to change the rules, they would need to follow the process.

Does the process require an NPRM in all cases? I could see it if the subject was a new one to the ARS, like RF exposure, but from the FCC's pronouncements on code testing it's clear that they think the subject has been discussed to death.

>>Does anyone really think that the FCC will keep any code testing of any kind

How will that work? Everybody takes a Morse test and there are a few questions on the written about what was sent?

>Changes to S25.5 will not
>change the fact that Morse code is in widespread use in ham radio and a mode
>that is in widespread use should be covered fairly in the testing.

Agreed.

>But no
>single mode should be covered so "fairly" as to be equal to all the other
>aspects of amateur radio combined to determine the qualifications of
>applicants. One can get all of the RF safety questions wrong, or all of the
>voice-mode questions wrong, and still be licensed.

That's a flaw in the method of written testing used now. The "Chinese menu" idea would solve it. But the FCC wants admin simplicity.

How does one "assassignate" anything? Is that a combination of "assassination" and "assignation?" How odd, perhaps perverse.

What is Hare's obsession with butting in on word play between others? Is it to trivialize any comments in here, to keep discussion away from truly important topics? Or is it just a meaningless rebuke made after being unable to cause a desired effect...such as assassination of characters?

>>I'm still waiting to hear the "POP" sound when Dick pulls his head out.
>
>Is this also part of your superior morals, Brian?

As in "go soak your head" (Carroll) and "you're a wanker" (Roll), it is the Word of Extras.

Roll is an ungrateful little whelp of a plagiarist.

The first use of "TRVTH" in here was by myself copying from the
comic strip "B.C." by Johnny Hart. Hart used "TRVTH" in a
sarcastic-satirical vein by the old Roman practice of shaping
engraved letters where a "U" became a "V."

>>If you asked me to QSY down to the CW

>
>It's a state of mind, not a frequency.

A state of Roll's mind. A very small state, smaller than Rhode
Island in comparison to Alaska.

But...it is the Word of Extras! :-)

"Publishing" in the modern idiom includes the manufacture and sales of CDs.

Since CQ sells collections of all articles in the 22 year history of Ham Radio
magazine, that is PUBLISHING and it still exists today!

>"Ham Radio" is two words and they are not improper, just defunct.
>The emotional bias seems to be yours since you appear to be the only
>person who is offended by the term "defunct".

Your explanation is defunct. HR is still being published.

>Oh, I wasn't writing of totals. I was writing of the obtuse responses

If I use a computer where I type in my replies in a CW QSO, I would
expect that the computer would send the entire string once I hit
return. Hopefully the software can measure your speed and respond
with like speed back to you.

But what fun is that....

>It could even be that the distance requirement wasn't a factor in anything
>at all. Multivariate statistics are like that.

I agree 100% - thus the "not the only factor" phrase.

But as K2UNK and W0EX have written, it could be an important factor. The old distance was 75 miles, while the new distance was 175 miles - quite an increase in one go. And the distance was "air-line", not road miles. In some parts of the country the road distance could be 250 miles or more. The distance requirement was to an FCC exam point that was at least quarterly. So a Novice in the sticks might have only 3 chances to try for General at the nearest exam point before the year was up, and each try might require well over 350 miles of travel.

Add to this the fact that the FCC exams were given on weekdays during school/working hours and the whole procedure becomes quite a burden on the prospective ham.

Say a 1964 kid wants to be a ham but lives 150 miles airline/200 miles road from a quarterly exam point. The exams are given at 8 AM. The kid would have to convince some adult to take him/her to the distant exam point and back, including an overnight stay, unless they want to travel in the wee small hours of the morning. Quite an expedition in 1964, in many parts of the country.

End result was that some folks just gave up on amateur radio, some became Technicians by circumstance rather than choice (Tech was given by mail, same as Novice, but was renewable), and some used "other means" - such as "moving" to Uncle Charlie's, which just happened to be over the line.

>>> Do the archives indicate what percentage of
>>>the Conditionals obtained their licensed by giving Uncle George's address?
>>>
>>None that I've seen. But I do clearly recall how upset some local
>>Conditionals
>>were about a false rumor that they'd have to retest.
>
>I don't know why you'd find this unexpected or significant.

Because the Conditionals I speak of were not way out in the boonies, nor was the trip to the Philly FCC office difficult in the mid-1970s for them.

>The upset
>seems to have identically the same root cause which upset Generals
>and Advanced when they lost full privileges, and which makes people insist
>that current amateurs not lose privileges in license restructuring even to
>this day. Many people seem to get upset if you ask them to pass more tests
>to retain the privileges they already have, and they seem to feel this way
>independent of their license class. There doesn't seem to be anything
>special about Conditionals feeling the same way when presented with the
>same prospect.

The difference is that the false rumor was that Conditionals would have to take the same tests to retain privileges. What ticked off so many about Incentive Licensing was that they'd have to pass new, more difficult tests to retain the same privileges.

Once upon a time, FCC required that a ham who moved inside the distance limit had to retest before an FCC examiner or lose the license. In those days, too, the Class A/Advanced and Extra were only available at FCC exam points, regardless of distance.

End result of all this was that for some hams the toughest part of the exam was just getting there. That's not right - the exam should be the focus.

IMO the best system was what the FCC did in the mid-late 1970s. They had exams at the FCC offices but would also send examiners to hamfests and other gatherings upon request. I think the requirement was that if you had a certain minimum number of testees (10?) the FCC would send an examiner.

Perhaps the best feature of the VE system is that it gives open access to the licensing process. That's a good thing.

Not that myth again!

Since the FCC began issuing medical waivers in 1990, license class alone is no
proof of code testing beyond 5 wpm. You have to know that a ham was licensed in
a particular class before that date to know for sure.

Could you do those things in that time frame if you had no background in radio beforehand, Ed?

Could you also learn enough to write essays on how they worked, in enough detail to convince the examiner? And do it on a similar time frame?

Why? All that would do is create more admin work determining who can and cannot renew, tick off about 85K Advanceds, and reduce the ARS license figures by about 37K Novices.

> 3) Eliminated permanent operating authority for an element 1 CSCE.

Again, why? It would make more sense to have Element 1 CSCEs never expire, because the test doesn't change significantly. Soon it will be academic anyway.

>By not doing so, we're back in the same situation that existed from 1991-1994.

Which leads me to believe that the FCC is finally getting its way on the Tech.

No, it doesn't. All it means is that any Advanced trying to renew gets renewed
as a General (just like Tech Plus's now are renewed as Tech's), and Novice
renewals are rejected.

Because the FCC eliminated the Tech Plus license class (with attrition out as renewals are processed). We are now in the same situation that existed in 1991-1994 which then led to the issuance of Tech Plus licenses to begin with. If the FCC wanted that license class, they would have kept it, but since they don't, they sent a message that they really don't want permanent op. authority for the code bands by CSCE only. Why would the FCC put us in that position again unless the next time they "fix" it, they plan on doing so a different way? That way isn't going to be by bringing back the defunct license class - but by eliminating the permanent privilege. There really aren't any other choices.

>>It makes me wonder whether or not the FCC staff that worked on restructuring

>>"Ham Radio" is no longer published. It has ceased to exist.
>
>"Publishing" in the modern idiom includes the manufacture and sales of CDs.
>
>Since CQ sells collections of all articles in the 22 year history of Ham
>Radio
>magazine, that is PUBLISHING and it still exists today

You know, Lennie....with a stretch like that you should consider a career
as a professional basball pitcher.

>Your explanation is defunct. HR is still being published.

The harder you try to cover your tracks, the deeper you dig yourself,
Lennie.

"Ham Radio" magazine is no longer in publication. It is being reprinted
(albeit in CD form), but it is NOT being "published".

>You cannot denigrate anything you don't understand. HR had technical
>content of amateur radio technology.

Now wait a minute, Your Twofacedness...YOU have been telling us for years
that there is no such thing as an "amateur" technolgy...You quite adamandtly
assert that radio physics is radio physics.

Are you NOW asserting that there is an "amatuer" technology and a
"non-amatuer" technology? Does RF now travel differently when emmited by an
Amateur Radio station as opposed to one of commercial design?

>>Your last stuff was garbled, Len.
>
>...only because you cannot understand it. Understood.

You forgot the question mark, Lennie. Of course your night school
education probably skipped punctuation.

And what 's to understand, Lennie? You're an idiot, you write trash, and
your posting are meant to do nothing but denigrate Amateur Radio and Amateur
Radio Operators.

Perfectly understood here.......

To my knowledge, the FCC has never changed the wording in Part 97 without an NPRM. Perhaps Phil can weigh in on this one.

>Lobster dinner? No, wait, you still gotta collect the first one I owe ya.

I CAN eat two lobsters, Jim! :-)

>How will that work? Everybody takes a Morse test and there are a few
>questions
>on the written about what was sent?

Yes, that is what I envision. Morse code text is sent and there are a reasonable number of questions about its content that are graded as part of the written exam. Like other modes, get them all wrong and be a little smarter somewhere else and one passes the test. It keeps Morse code testing in Amateur Radio in a way that is fair and balanced with its use within the Service.

>I, on the other hand, still have to deal with the knuckles I broke on
>Bert's jaw!

Gave me a whole new appreciation for oatmeal. ;-)

>Congratulations on your new call sign, Bert! "Watusi!" Pretty cool!

My father is NYPD ret. and served his longest tour at the 78 Pct. in Park Slope, Brooklyn. Well, at a shade over 6' 4", dad was the tallest officer in the house. (Pct.) So his friends bestowed the nickname 'Watusi' on him after the West African tribesmen who often grew over 7' tall.

When my father saw me remove the telescoping antenna from my Christmas gift, a 300mW CB h/t, and solder in a home-brew dipole in it's place, he decided to buy me my first 40 ch. CB. He often took me to the airport (JFK) and tuned in the tower freqs as well as introducing me to the world of SWLing. (His passion.) So in many ways, dad is kinda responsible for introducing me to radio. My callsign is a small tribute to him. BTW, dad's alive and well to appreciate it...and can occasionally be heard talking to his son on ch. 39 usb on Sunday mornings. Don't wait until it's too late to say thanks in whatever way you can.

Additionally, it's a pretty cool CW call and I happen to like the ring of a 2x2 call. Take care, Larry.

73 de Bert
WA2SI

P.S. Nobody answered my 40-meter dipole vs. 80-meter dipole question. :-(
Well, I'm puttin' it up anyway and we'll see what happens. :-)

>> Nah, never happen. ;-)

Just having some lighthearted fun, Jim...hence, the ;-). Actually, I resemble that remark. I was, and am still, a CBer, 11-meter enthusiast, or whatever your preference of terminology is. I'm also an ARO, and wear both hats proudly. Every now and then, I see a remark that paints all 11-meter ops with an awfully wide brush. Whereas I used to jump right into the fray, I'm a bit more selective wrt my battles and my comments more subtle. Hope that helps re. my comment.

One of the most satisfying things that I've done is to practice the code with my niece on a Part 15 device on 11-meters. CB channel 14 or 27.1250 MHz to be exact...thus invalidating the classic troll's cry of "Without CW, it's just CB." Our efforts were rewarded by a few ops (AR?) that dropped in and sent us "good luck" messages.

Hi Dick,

I'm still working with my niece. The attention span of a 15 yr. old girl can be challenging at times, to say the least. She'll get there though. When she's done, I have a spare 10-meter rig (Still NIB though.) for here and a replica of the Titanic key. After I told her that they used Morse code on the Titanic, she thought it's be "way cool" to learn. (Thanks to Leo Di Caprio.) I see Tech "+" in her future...at least for now, so why should I let the spare HR-2510 collect dust? (No, it's not modified. 10-meters only.) Take care now.

Looks like some of us just might have to start a cw net on 80 in the
evenings! ;)

73 from Rochester, NY
Jim
ps - but, of course, someone COULD be using a keyboard. I wonder if anyone
has programmed a Morse sending system that puts some 'swing' into the fist?
In any case, arguing the cw may be old, but it beats the old 'boy scout'
thread that really started getting tired a year or so ago ... I do wish I
could still use landline Morse. I used it once with mixed results (I had to
ask the guy to qrs to around 16 words per minute as I was using a mental
'look-up' table at the time for the various different characters. After 35
years or so, I've forgotten it. Big deal.)

Amateur Radio Newsline™ Report 1300 July 12, 2002

Celebrating a quarter of a century in service to ham radio, this is Amateur Radio Newsline report number 1300 with a release date of Friday, July 12th 2002. It follows in 5-4-3-2-1.

The following is a Q-S-T. The ham radio Olympics are happening in Finland and a Reading Pennsylvania teen is named Young Ham of the Year here in the United States. Find out who on Amateur Radio Newsline report number 1300 coming your way right now.

(Billboard Cart Here)

**

RADIOSPORTS: THE HAM RADIO OLYMPICS FOR 2002 ARE ON

Its the Super Bowl of ham radio contesting. The 2002 World Radiosport Team Championship games also known as WRTC 2002 have been taking place this week. Jeramy Boot, G4NJH, reports:

--
The World Radiosport Team Championship, sometimes called 'the Olympic Games of Amateur Radio', takes place in Finland between the 9th and 15th of July. WRTC is a competition among 52 two-person teams of the top amateur radio contest operators in the world.

By bringing competitors together in one geographic area and providing equal operating conditions, including antennas and power, the variables normally associated with radio contesting are minimised, and the individual team's operating skills are emphasised. Look for the national teams taking part in next weekend's IARU HF Championship contest from sites in the Helsinki area and using callsigns with the unique OJ1 to OJ8 prefixes.

Jeramy Boot, G4NJH.

--

The contest began at 1200 U-T-C on Saturday the 13th of July, and runs for 24 hours. The WRTC 2002 organizing committee is asking any of you who worked the conterstants to e-mail your logs by 1800 U-T-C on July 14. These "early bird" logs will be used only for log checking purposes related to the WRTC 2002 teams. The e-mail address is logs@wrtc2002.org

Also, Film maker Dave Bell, W6AQ, is in Finland recording the event on digital videotape. Bell produced the popular Ham Radio Olympics video that chronicled the 2000 WRTC games. (WRTC2002, GB2RS, W6AQ)

**

RESCUE RADIO: HAM RADIO AND THE TEXAS FLOODS

On this side of the Atlantic, the Federal Communication Commission declared a general communications emergency Friday July 5th in response to severe flooding in parts of Texas. Amateur Radio Newsline’s Bruce Tennant, K6PZW has more:

--
Thousands of people were evacuated from three West Texas towns as a massive storm dumped more than a foot of water on an area that rarely sees more than 2 feet a year. This, as rainfall in flood-weary Central Texas continued and flood water surrounded homes in 29 counties.

Statewide,the week of flooding has forced at least 4,000 people to evacuate, killed at least eight people and caused tens of millions of dollars in damage. Its also cut off normal lines of communications to some areas and that’s where ham radio was called in.

On Friday, July 5th, the FCC issued an edict declaring two parcels of spectrum -- one on 40 meters and the other on 75 as off limits to all but those stations handling flood emergency traffic for 72 hours. Those frequencies were 7.285 MHz during daylight hours and 3.873 MHz at night. Amateurs not directly involved in the emergency communications were required to stay at least 3 kHz away from these frequencies until the order is rescinded. The FCC cancelled the order at 1700 UTC on Monday, July 8th. But as we go to air, hams involved in Texas ARES, along with other volunteer groups, are still providing assistance to the flood ravaged areas.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW, in Los Angeles.

--

More on this story as information is made available. (FCC, ARRL Bulletins, Internet postings, other sources)

**

RESCUE RADIO: AZ HAMS STAND DOWN AS WILDFIRE IS CONTAINED

After weeks of battling the largest wildfire in Arizona history, ham radio has stood down and firefighters from around the country are being reassigned to other states or sent home. This, as the half-million acre Rodeo Chedeski blaze was finally contained on Sunday, July 7th. And hams have gone home. Amateur Radio Newsline’s Norm Seeley, KI7UP, in Scottsdale has the rest of the story:

--
SATERN, which by the way stands for "Salvation Army Team Emergency Radio Network was probably the most visible ham radio communications group involved with the giant Rodeo Chedeski firestorm. SATERN was active throughout the emergency providing assistance to The Salvation Army in it's disaster relief mission. The Salvation Army was assigned by the State of Arizona to be responsible for receiving all material donations. It also was responsible to distribute these supplies to any agency or group requesting them. The SATERN net, operated on 7.265 MHz dayside and 3.990 MHz evenings It finally stood

down and released the frequencies when the shelters closed down and their services were no longer needed.

What SATERN did not do was to handle health and welfare messages into and out of the area. That job fell to ARES and the Red Cross and both responded as expected. A-R-E-S used several High Frequency nets, local repeater communications and the Cactus Radio Network intertie to handle hundreds of tactical and health and welfare messages.

Another group deserving mention is the Kachina Amateur Radio Club. It was activated on June 18th handling communications for the Navajo Emergency Operations Center and shelters set up for the evacuation of all evacuation areas at that time. The Kachina Amateur Radio Club was on the air in support of the shelters through June 30th.

As the fire peaked in late June, more than 4,400 personnel -- most of them firefighters -- were working to corral the blaze. That number has been reduced to about 1100 now that the fire is fully contained.

For the Amateur Radio Newsline, I’m Norm Seeley, KI7UP, in Scottsdale Arizona.

--

As we go to air, the firefighters still on the scene are busy mopping up smoldering embers top insure no new eruptions take place. In some areas, crews are already at work seeding the burned land to help minimize the effects of erosion from the coming monsoon rain season. (ARNewsline™ from various sources)

**

RESCUE RADIO: EAS WORKING WELL IN THE ARIZONA WILD FIRE EVACUATIONS

The E-A-S system woked well in Arizona during the recent Rodeo Chedeski wildfires. According to reports in the CGC Communicator, Navajo and Apache County EAS woked almost flawlessly in ordering evacuations during fires. About 30,000 people were evacuated at the height of this emergency. (CGC Communicator)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the WV8AR repeater srerving Putnam County West Virginia.

(5 sec pause here)

**

AWARDS: JOSH ABRAMOWICZ, KB3GWY, NAMED ARNEWSLINE™ “YOUNG HAM OF THE YEAR”

The nominations are in and the committee has reached a decision on this yearsAmateur Radio Newsline Young Ham of the Year. And now its time to share that decision with you. And who better to make the announcement than the 2001 Young Ham of the year. Pareick clark, KC8BFD. introduces us to yet another young ham who is keeping the hobby alive:

--

He is 17 years old. An 11th grader at Central Catholic High School in Reading Pennsylvania and an Eagle Scout. And less we forget, he loves bringing new young hams into the hobby through the scouting program. And for those reasons and many more, Amateur Radio Newsline has named Josh Abramowicz, KB3GWY, as its 2002 Young Ham of the Year.

Josh was away at a scout camp when the committee reached its decision. We finally got him on the phone and this was his reaction when we told him the news:

--
Abramowicz reaction audio
--

According to the nominating form, Josh Abramowicz became interested in ham radio because of his parents and the Boy Scouts. His dad is Mark NT3V and his mother is Suzanna NZ3G. Josh says that for him, becoming a ham was in the cards:

--
Abramowicz: I got into it [Amateur Radio] through them when they brought the stuff [ham station out years later after it had lied dormant for awhile. They hooked it up and I just could not keep my hands off of it As a matter of fact, I used to sneak up and just dial up and down the bands just listening to stuff sometimes."
--

His parents also gave Josh a good reason to get his ham ticket:

--
Abramowicz: "After the year years went by they said: 'Why don't you go and get your license – and by the way – if you don't get your license you are not getting a drivers license. I said O-K."
--

Talk about incentive licensing but in short order Josh had his Technician ticket. But it was his involvement in the Boy Scouts, a scouting Jamboree and a chance to operate K2BSA that really started his ham radio career:

--
Abramowicz: "So I looked into what was required on the application. Of coarse you had tio be a licensed Amateur Radio operator. By then I had my Technician license and I really started pushing for my General license. That's where I am now, studying for the Extra license."
--

As a member of the K2BSA staff at Fort A.P. Hill in Virginia, Josh helped to demonstrate ham radio to the 35,000 Scouts attending the event. He also helped in the training of some 400 Scouts who earned Radio Merit Badges at the gathering.

But thats not all. Another achievement credited to KB3GWY is that of organizing a scouting Amateur Radio Venture Crew with the Hawk Mountain Council in his hometown of Reading. PA. What is a Venturing Crew? Josh explains:

--
Abramowicz: “Its kind of like the Explorer program. It involves boys and girls over the age of 14 until you become an adult. It’s a completely separate program designated to high adventure kind of things – not your normal, average camping trips but more involved things like Philmont Treks and summer camp kinds of things or the Florida Sea Base would be considered high adventure.”
--

Josh presented his idea for a radio Venture Crew to the Frankford Amateur Radio Club and obtainded its support as the sponsoring organization. He then convinced the Hawk Mountain Council leadership to use space in a new science center at its headquarters for a perminant Amateur Radio station. This station will soon be available to campers the year round.

--
Abramowicz: “Its up here on the mountain. The propagation will be absolutely great. I’m expecting some really, really good DX from up here and we have high hopes. As a matter of fact, we are going to be doing a demonstration up here this weekend on Saturday. We are going to have some of the Venture Crrew kids up. Just fiddle around with to see whats open and see what we can find. Get the kids on and let them talk a little bit. Maybe a 2 meter set-up. And I think that the Cub Scouts are up that weekend. And they will be checking us out during their free time. They are up for a Super Cub Weekend.”
--

Josh Abramowicz, KB3GWY, will receive his Young Ham of the Year Award plaque at the Huntsville Hamfest in Huntsville Alabama on Saturday August 17th. His trip to the hamfrest is a gift from Vertex Standard Corporation which wiull also be prssenting Josh with a gift of its Yaesu brand ham radio gear. Josh will also receive a week at Spacecamp Huntsville courtesy of CQ Magazine.

--

The committee judging the award also name to runner-up finalists. They are Evan Anderson, KC0CWP, of Ashland Nebraska and Thomas Tenaglia, K3TAT who lives in West Chester Pennsylvania. Both will receive a certificate of appreciation from the award sponsors. (ARNewsline™)

**

REMEMBERING THE PAST: HEIL DONATES SPECIAL MICS TO QUEEN MARY AMATEUR STATION

A special presentation of ‘commemorative microphones’ honoring the operators of the Queen Mary ocean liner Amateur Radio station will be made on

Saturday, July 27th. This, by by Bob Heil, K9EID, the President of Heil Sound Ltd..

The Queen Mary is permanently docked in Long Beach California. The ship is a popular tourist attraction as is its Amateur Radio station, W6RO, which operates daily from the historic Queen Mary Wireless Room. And it is in that Wireless Room that the presentation will be made.

According to K9EID, the new microphones are being custom manufactured for the Wiress Room. He adds that each is an exact replica of the broadcast mic’s used during the years the Queen Mary was at sea. (Heil Sound release)

**

HANDI HAMS: EXTRA CLASS TAPES NOW AVAILABLE

The Handi Hams have announced that the Extra Class Question and Answer pool, valid through 2006, is now available in an MP3 audio CD and in two track tape for its blind members. If you need a copy, contact Handi Ham headquarters at area code 866-426-3442 or sewnd an e-mail request to secretary@handiham.org. Again, yopu must be a Hamdi Ham member to qualify for this recording. And Handi Hams also has announced that work continues on the main body of the ARRL Extra Class License Manual in audio format for its blind members as well. (Handi Hams)

**

PROMOTING HAM RADIO: CQ MAGAZINE TAKES ON “THE HUMAN RACE”

CQ magazine has been named the Official Journal of "The Human Race." “The Human Race" is a planned educational television series in which two amateur radio operators will participate in a global "road rally." Amateur Radio Newsline’s Henry Feinberg, K2SSQ, has an in depth look at the show and how it will work:

--

How does it work? Simple. There will be two ham radio contestants. One ham will head East and the other West from Kansas City Missouri beginning in July of 2003. Over the next six months the hams will travel around the world but using only transportation that is volunteered by other amateur operators that the ham competitors meet along the way. The race will end in a location roughly halfway around the world where the paths of the two competitors cross.

But thats only part of the story. Along the way, each racer will encounter a series of pre-selected "ham hosts." These are people who have expertise in a particular area of amateur radio. They not only play host to the competeing amateur, but also are interviewed by the competitor about their area of specialty and the role ham radio has played in their lives.

William Desjardins, W1ZY, is the shows producer. He says that " 'The Human Race' is based on the premise that Amateur Radio is inherently a human activity. As such, technology is a tool used by people around the world to connect and communicate with each other.”

--
Desjardens: “People who use the Internet, and use chat rooms and send video pictures to each other -- and engage in instant messaging and so forth -- these people are prime candidates to become amateur Radio operators.”
--

By way of technology, each competitor will be outfitted with advanced communications systems, including amateur stations. Each will also be accompanied by a TV production crew and tracked using the Global Positioning System and APRS. This information will be displayed on a constantly updated website enabling hams and others around the world to follow the progress of the race making it a competition that everyone can be a part of.

For the Amateur Radio Newsline, I’m Henry Feinberg, K2SSQ.

--

For its part, CQ will publish a series of articles and updates written by Human Race Producer Desjardins. It will also provide updates and additional information on its website.

The tentative schedule calls for the completed 8-part series ready to air in the fall of 2004.For more information on "The Human Race," see the program website at www.home.earthlink.net/~bdesj but soon to be moved to http://www.humanrace.org (CQ)

**

BREAK 2

Here 25 years ago and still serving you today. From the United States of America, we are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org.

**

UPCOMMING EVENTS: MUSEUM SHIPS WEEKEND

Some interesting upcoming events that you will want to know about. We start off with Museum Ships Weekend. That’s the 20th and 21st of July and word that The U-S-S Salem Amateur Radio Club will be on the air as K1USN. During Museum Ships Weekend each participating vessel will be on the air for 48 hours and the idea is to work as many of them as you can In the case of the U-S-S Salem, a certificate will be available for working ten or more event stations during the event. For more information and a QSL address please take your web browser to www dot qsl dot net slash K1USN. (Via e-mail)

**

SPACE AND SCIENCE: HIGH ALTITUDE HAM RADIO BALLOON LAUNCH SUCCESS

EOSS 57, the Edge of Space Sciences Amateur radio group of Colorado successfully launched and recovered 3 high altitude balloons on June 22nd. THis, using Amateur Radio APRS and DF techniques to track and recover the payloads. According to several Internnet postings, he balloons carried high altitude experiments, camera's and fast scan amateur television to an altitude

in excess of 80,000 feet. The launch took place in DeerTrail, on I-70 east of Denver, with the balloons taking a general North easterly track. The landings occuring near the Fort Morgan Colorado area. The Montana Space Grant Consortium, and Iowa State University Habet crews launched with EOSS and tracked the balloons to touchdown. More information is on the web at www.eoss.org. (EOSS Release)

**

INTERNATIONAL - AUSTRALIA: VNG GETS 6 MONTH REPRIEVE

The Australian standard time and frequency station VNG, which was scheduled to close down on the 30th of June, has received a six-month reprieve. The station will now close down on the 31st of December 2002. The postponement came about following complaints from Radio VNG users. However, the commission that agreed to the postponement has also insisted that the VNG Users Consortium provide a voice announcement for broadcast on the station from mid-July, advising all users of the new closing date. (Q-News)

**

INTERNATIONAL – CANADA: PERMISSION TO JAM

The Canadian military and police departments have been authorized to block radio and mobile phone signals if necessary during the G8 Summit and during the Pope's visit to Toronto in July. A Royal Canadian Mounted Police spokesperson told szeveral newspapers that the move was essential to ensure the safety and security of those attending both events. This is the first time legal provisions against the interference of radio communications have been overridden in Canada. (Published news reports)

**

DX

In DX, word that SP3GVX, who operated from HF0POL in 1997 and 2000 will spend a year at the Hornsund Base on Spitsbergen starting in July. His new callsign is JW0HU. There is no QSL information available at this time. (GB2RS)

Also, SV1BRL will be active again portable from Kefalonia Island from July until mid-September. He welcomes bureau QSLs, but please note that they should be routed through the French REF Bureau, marked DPT 33. Do not send cards through the Greek QSL bureau. (GB2RS)

And a new RSGB QSL Bureau sub-manager has been appointed for the holders of Foundation Licences in Scotland. Those are the new MM3 series of callsigns now being heard on the air. The person taking on the post is Mr R Simpson, GM7NZI. His addxress is 53 Jedworth Avenue, Glasgow , Scottland, post code G15 7QE. (RSGB)

**

INTERNATIONAL – UK – A SECOND CHANCE FOE DIGITAL TV

Still in the U-K, an attempt is being made to revive that nations terrestrial digital TV industry. This, following the collapse of ITV Digital, the company that held the license. According to the Netherlands based Media Network e-newsletter, the U-K's Independent Television Commission considered four bids to take over the license, and has decided to award it to a consortium consisting of the British Broadcasting Company, British Sky Broadcasting and transmission services provider Crown Castle Communications. But the question remains as to whether or not the new consortium be able to restore confidence in the British digital television industry. More is on the web at http://www.rnw.nl/realradio/features/html/uk020705.html (Media Network)

**

THAT FINAL ITEM: THE FUTURE OF DIGITAL TV: PART 4

And speaking of digital television, this week we take a look at transmission systems and who is providing a digital picture to you. Again, from the pages of the D-X Audio Service magazine, here is Editor Fred Vobbe, W8HDU.

--
This is an audio only report. No text available. Please download MP3 audio at www.arnewsline.org.
--

By the way, for those of you not aware Fred Vobbe, W8HDU, is not only the editor of the DX Audio Service magazine. He is also the Chief Engineer at WLIO television in Lima Ohio where he das a first hand working knowledge of whats happening in the world of Digital TV. (NRCDXAS)

Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc,rec.radio.amateur.policy

I take my foundation exam next week. I'm sorry to see that the elitism and snobism that I was told existed in the amateur fraternity really does exist. I don't think it was the difficulty of the exam that stopped newcommers becomeing Radio Amamteurs, it was that no one wanted to associate with such stuck up snobs as yourselves. I don't know about boycotting M3's, maybe we should boycot all you others!!!!

Seriously, there are a lot of good people on my course who will make good amateurs, stop moaning that it's not fair because you had to sit a harder exam. Wait to you contact an M3 on the air and then make your decision about how good a broadcater they are then. Please put your prejudices away and give us a chance!

Regards Chris Heaton.

CW is a mode for gay people. CW is not a RADIO mode. RADIO means without WIRES and TELEGRAPHY was invented for WIRED STATIONS. There is no reason to use CW today (PSK31 is far better), except if you are gay.

Dave, I did the search, then wrote it down on a crib sheet incorrectly.
That is a "typographical error." I posted it in several replies to your
usual smug "my stuff don't stink" replies.

The next day you said that Ham XX doesn't exist. Welp, you talked to him, I
talked to him, so he must exist. I went back and searched again and saw
that I omitted a letter of his call. I corrected the error.

Of course, now that he exists, and Dennis posted the French authorizations
showing he was correct, you don't have a leg.

So get back to digging that hole so you can bury your stinking stuff.

Writing something on a crib sheet incorrectly doesn't even qualify as a
typographical error. Typing one thing when you intend to write
something else is a typo. What you did was write it down and then
submit it here several times. You did not make a typing error according
to your story.

> The next day you said that Ham XX doesn't exist. Welp, you talked to him, I
> talked to him, so he must exist. I went back and searched again and saw

Yes, eventually you did that.

>
> Of course, now that he exists, and Dennis posted the French authorizations
> showing he was correct, you don't have a leg.

I have a couple of them. I didn't break French regs. French hams did.

> So get back to digging that hole so you can bury your stinking stuff.

You want some help getting out of the hole in which you're mired?

And left in 2000?

Regardless, Ed's strong point isn't math.

And the French authorization starts at 50.200 through 51.200 MHz.

Thus, all French hams you worked at 50.110-50.130 were outside of their
authorization, just as F1FDR informed you while you were still in Tanzania
working them at 50.110-50-130.

You've been able to deny it for over two years. Poor gullible Ed even bought in to your deny and delay tactics. Reminds me of all the stupid Bill Clinton supporters.

Dave, congratulations on winning the moldy Wonder Bread award and taking naive Ed down with you. He probably didn't deserve it, but that's what happens when you pick the wrong friends (cronies).

73 and Sayonara,

Brian/N0iMD

Last this Subject, unless you want to continue it. Just don't respond and I'll figure it out.

Dave, I'm not in the auto repainting business. I'm not interested in spray
painting your car. Its pathetic that you would ever have made such an
accusation.

Last.

Do you agree that you are "confused" as Croney Ed has suggested? That would explain a lot, but I don't think you are confused. I think you are a mean, little, little man.

I guess that when you made the statement that you just didn't
> have time to study code to upgrade -well before the restructutring-
> because you had to babysit the kids, but you had plenty of time to post
> endlessly on rrap that makes ME a liar. I think the readers who were
> here at that time will see it otherwise.

Dick, I intend for my second marriage and my second crop of kids to go well. Out of necessity, I devote a lot of time to my career. Out of love I devote a lot of time to my family.

Why do you wish to harm my family with inane code practice?

> So who is the congenital liar?

Dick, make no mistake about it - YOU ARE.

> Just because later restructuring gave you the whole enchilada with your
> Novice code test changes nothing.

Liar. I don't have the whole enchilada. Go look on QRZ.COM

> > I have spent an enormous amount of my own free time learning the Morse
Code.

As an E-5 in the 1985 Air Force, I was put in a position vacated by a Major. A little over two years later as I PCSd to Korea, by job was divided and two Captains assumed my duties. One found it too difficult and was sent to mental health, then discharged.

As an E-5 I had more responsibility than anything I"m likely to encounter in the civilian world at any time in the remainder of my 2nd career.

I think Dave was on SSB. I wasn't there, so you'll have to ask him.

Me too. That's why I don't intentionally work out of banders when I'm operating.

Its just not Good Amateur Practice.

>ps - but, of course, someone COULD be using a keyboard. I wonder if anyone
>has programmed a Morse sending system that puts some 'swing' into the fist?

That is not a problem insofar as writing computer code for a
computerized keyboard-driven keyer. The trick is to incorporate
a random-number generator subroutine into the code flow
between the stored character string memory and the output.

Note: Random-number routines have been common for years
and are used in games and other applications requiring a form
of randomness. It is an interesting sub-division discipline of
mathematical theory involving statistics and is usually taught
as part of semi-advanced computer languages. The random-
number generation subroutines can be biased to have their
results peak "off-center" from a normal distribution of near-true
randomness.

To incorporate such randomness or "swing" into an electronic
keyer requires only in insertion of the random-generating sub-
routine between the character's individual sequence memory
and the output. Ideally, the randomness is a controllable
fraction of a correctly-keyed sequence timing, more conveniently
included as a delay in time of off-to-on or on-to-off timing of the
true or ideal "on" or "off" changes.

Adding bias to the randomness could also be controlled so that
dashes might be longer than dots (by a small amount) or vice-
versa. This would mimic the human operator's habits of not-
quite-perfect timing. Adjustability of the bias as well as the
fraction of precise timing could allow simulation of various
human operators.

It's a straight-forward method of simulation using known
computer coding techniques. One volume in the famous
Donald A. Knuth 3-volume series on computer coding will
explain the theory behind random number generation routines.

The question is WHY anyone would bother to try this other than for individual intellectual amusement. There is so little commercial application for on-off codings that it must be just a hobby exercise.

There CAN be an intellectual challenge in decoding morse codes because humans are NOT perfect and do not time their on-off codes precisely. The challenge there is to find the variations in timing and adjust for them in order to distinguish between dots, dashes, and spaces. I've seen what one other programmer can do, have observed the results as being successful. That was just an individual-challenge coding problem. It can be done. It would be less difficult to introduce randomness in the precise timing of a computerized morse code generator to simulate a human's particular sending.

>>Radio magazine, that is PUBLISHING and it still exists today
>
> You know, Lennie....with a stretch like that you should consider a
>career as a professional basball pitcher.

I've never played "basball." Played baseball, though. :-)

So, Mr. Webster, how do you define CD-ROM disks being sold on the market today? Try explaining that CDs "aren't published items" to the copyright lawyers and US law. Do you need a link to the US government's regulations on copyrights?

>>Your explanation is defunct. HR is still being published.
>
> The harder you try to cover your tracks, the deeper you dig yourself,
>Lennie.
>
> "Ham Radio" magazine is no longer in publication. It is being reprinted
>(albeit in CD form), but it is NOT being "published".

Poor baby, still doesn't understand the term "published" or its application. Worse yet, the poor feller thinks he's someone else...

>>You cannot denigrate anything you don't understand. HR had technical
>>content of amateur radio technology.
>
> Now wait a minute, Your Twofacedness...YOU have been telling us for years

Poor baby is still confused. :-)

> Are you NOW asserting that there is an "amatuer" technology and a
>"non-amatuer" technology? Does RF now travel differently when emmited by an
>Amateur Radio station as opposed to one of commercial design?

I have no idea what is "amatuer" technology or "non-amatuer" technology. I know the physics of electronics and the propagation of electromagnetic waves...I know the specific

aspects of radio technology that is used in amateur radio.

Most amateur radio transmitters ARE of commercial design. :-)

There is no difference in the basic principles of radio physics as
it is applied to different USES of radio equipment defined by man-
made laws. Unfortunately, so many radio amateurs have so
little knowledge of basics in radio that they think the only
"correct" technology is that shown in ARRL publications.

>>>Your last stuff was garbled, Len.
>>
>>...only because you cannot understand it. Understood.
>
> You forgot the question mark, Lennie. Of course your night school
>education probably skipped punctuation.

Still on this "denigration of night school" kick, ey? Too bad, since
college courses are still college courses regardless of the time of
day or night they are taught. The only difference is accreditation.

College credit courses at night are a very convenient time for all
those who must work during daytime hours.

> And what 's to understand, Lennie? You're an idiot, you write trash, and
>your posting are meant to do nothing but denigrate Amateur Radio and Amateur
>Radio Operators.

"Idiot?" I doubt that although my sanity may be questioned when
I am trying to explain the obvious to those who cannot possibly
understand unless someone in uniform or wearing a suit of
credentials explains it to them.

"Write trash?" I've written professionally on several different subjects
but none of them concerned sanitation departments or refuse
collecting. You must have someone else in mind... :-)

"Denigrate amateur radio?" Not at all. There are certain regulations
in US amateur radio which I would prefer to be changed, but I think
(and have stated many times) that amateur radio is a fine hobby.

"Denigrate amateur radio operators?" Only certain ones, most
notably those who are "pre-restructuring amateur extras" that
emphasize morse code skill over everything else in ham radio.
It is the INDIVIDUAL that may be a target of negative criticsm,
not the hobby.

1416. New Code Test Question!

Newsgroup: rec.radio.amateur.policy
Date: 2002-07-13 02:54:50 UTC
From: KB9TMP <kb9tmp@juno.com>
Message-ID: <ago4po$3dg$1@dagobah.blueriver.net>
Source record: 49228

We are having a R.A.C.E.S. exercise tomorrow and a group
of us went to the Indiana State's mobile command center for
a tour this afternoon. This is run by the IN State EMA and the
IN State R.A.C.E.S. We talked about upgrading of licenses
and one of the hams there said that he knew someone who
like me knows code but can't hear the code. And the VEs
allowed him to take a morse code "sending" test and passed
him. Is this really possible or are they just blowing smoke
up my mirror?

BTW we're not talking about someone deaf, just someone
who can't pick out by ear. If it's for real I'll be ready next
week for the test "NO SWEAT"

Opinions anyone?
